A contemporary American masterpiece about music, race, an unforgettable man, and an unreal America during the Civil War era At the heart of this remarkable novel is Thomas Greene Wiggins, a nineteenth-century slave and improbable musical genius who performed under the name Blind Tom. Song of the Shank opens in 1866 as Tom and his guardian, Eliza

Bethune, struggle to adjust to their fashionable apartment in the city in the aftermath of riots that had driven them away a few years before. But soon a stranger arrives from the mysterious island of Edgemere—inhabited solely by African settlers and black refugees from the war and riots—who intends to reunite Tom with his now-liberated mother. As the novel ranges from Tom's boyhood to the heights of his performing career, the inscrutable savant is buffeted by opportunistic teachers and crooked managers, crackpot healers and militant prophets. In his symphonic novel, Jeffery Renard Allen blends history and fantastical invention to bring to life a radical cipher, a man who profoundly changes all who

encounter him.

The Unquenchable Worshipper issues a passionate call for a return to an unadulterated, first-love lifestyle of worship. In his first book release, respected worship leader and songwriter Matt Redman writes: "The revelation of God is the fuel for the fire of our worship. And there is always more fuel for the fire. When we open the eyes of our heart, God's revelation comes flying at us from so many different angles." Open the eyes of your heart and let the gut-level message of The Unquenchable Worshipper cause you, like martyred missionary Jim Elliot, to say, "Saturate me with the oil of Thy Spirit, that I may be aflame. Make me Thy fuel O flame of God." It's time to dive into the heart of worship—will you take the plunge?

A plain English guide to high frequency trading and off-exchange trading practices In Dark Pools & High Frequency Trading For Dummies, senior private banker Jukka Vaananen has created an indispensable and friendly guide to what really goes on

inside dark pools, what rewards you can reap as an investor and how wider stock markets and pricing may be affected by dark pools. Written with the classic For Dummies style that has become a hallmark of the brand, Vaananen makes this complex material easy to understand with an insider's look into the topic. The book takes a detailed look at the pros and the cons of trading in dark pools, and how this type of trading differs from more traditional routes. It also examines how dark pools are currently regulated, and how the regulatory landscape may be changing. Learn what types of dark pools exist, and how a typical transaction works Discover the rules and regulations for dark pools, and some of the downsides to trading Explore how dark pools can benefit investors and banks, and who can trade in them Recognize the ins and outs of automated and high frequency trading Because dark pools allow companies to trade stocks anonymously and away from the public exchange, they are not subject to the peaks and troughs of the stock market, and have only recently begun to take off in a big way. Written with investors and finance students in mind,

Dark Pools & High Frequency Trading For Dummies is the ultimate reference guide for anyone looking to understand dark pools and dark liquidity, including the different order types and key HFT strategies.

Stevens takes readers on a harrowing descent into the mind of a mass murderer in this eerily realistic serial-killer novel. At the center of this gripping epic novel of mass murder, pursuit, and psychological terror is Thomas Bishop, a psychotic young killer who believes he is the son of Caryl Chessman, who was executed for rape in California amid intense controversy. Subjected to unmerciful physical and mental torture from an early age, Bishop kills his mother at the age of ten and is placed in an institution for the criminally insane. He grows to manhood knowing the outside world only through a television screen. At twenty-five, he succeeds in a brilliant escape and change of identity and begins to move across the country, murdering women in particularly gruesome ways. Pursued by reporters, police, and the mob, Bishop manages to

elude them all, and the search for him becomes the greatest manhunt in US history. The chilling denouement will hold readers spellbound until the shattering, unforgettable conclusion.

Inelastic Analysis of Solids and Structures presents in a unified manner the physical and theoretical background of inelastic material models and computational methods, and illustrates the behavior of the models in typical engineering conditions. The book describes experimental observations and principles of mechanics, and efficient computational algorithms for stress calculations as typically performed in finite element analysis. The theoretical background is given to an extent necessary to describe the commonly employed material models in metal isotropic and orthotropic plasticity, thermoplasticity and viscoplasticity, and the plasticity of geological materials. The computational algorithms are developed in a unified manner with some detailed derivations of

the algorithmic relations. Many solved examples are presented, which are designed to give insight into the material behavior in various engineering conditions, and to demonstrate the application of the computational algorithms.

Despite persistent pressure from state censors and other tools of political control,

investigative journalism has flourished in China over the last decade. This volume offers a comprehensive, first-hand look at investigative journalism in China, including insider accounts from reporters behind some of China's top stories in recent years. While many outsiders hold on to the stereotype of Chinese journalists as docile, subservient Party hacks, a number of brave Chinese reporters have exposed corruption and official misconduct with striking ingenuity and often at considerable personal sacrifice. Subjects have included officials pilfering state funds, directors of public charities pocketing private donations, businesses fleecing unsuspecting consumers - even the misdeeds of journalists themselves. These case studies address critical issues of commercialization of the media, the development of ethical journalism practices, the rising specter of "news blackmail," negotiating China's mystifying bureaucracy, the dangers of libel suits, and how political pressures impact different stories. During fellowships at the Journalism & Media Studies Centre of the University of Hong Kong, these narratives and other background materials were fact-

checked and edited by JMSC staff to address critical issues related to the media transitions currently under way in the PRC. This engaging narrative gives readers a vivid sense of how journalism is practiced in China. --David Bandurski is a scholar at the University of Hong Kong's China Media Project, a research and fellowship initiative of the Journalism & Media Studies Centre. Martin Hala has taught journalism at the Universities in Prague and Bratislava. -

Thesis (M.A.) from the year 2006 in the subject Computer Science - Miscellaneous, grade: 1,1, University of Heidelberg (Seminar für Computerlinguistik; Institut für allgemeine und angewandte Sprachwissenschaft), 64 entries in the bibliography, language: English, abstract: In these days our daily life is more and more affected by computers, chips, electronic equipment, et cetera. Owing to this increase of technology, even in common everyday objects, like for example a fridge, it is necessary to find a simple and intuitive way to interact with complex technology. Natural language dialog systems could be the solution, or at least a part of it, how humans and machines could communicate or interact

with each other. With the help of dialog systems people could access information and technical functionality of computers in a natural way using linguistic in- and output. One of the main tasks of such dialog systems is to provide fast and appropriate answers to user's questions or requests. The challenge, therein, is how do we find these answers out of the flood of information.
