The lack of guidance
on how to specify
safety requirements
that are properly

traceable to the architecture design and to failure propagation models is one of the main reasons for their incompleteness and inconsistency, what turns to be a root cause of safety incidents. This book describes techniques to address this challenge in early and late stages of the development process. *Focus on modern careers. 1 [BMS, A2]* Harvard University Press

Sind Verhaltenstherapie und Zwang - wie immer wieder behauptet - unvereinbar? Schliessen sich Freiheitsentzug und Beziehungsarbeit gegenseitig aus? Endet die Unterbringung von Kindern und Jugendlichen in

geschlossenen Heimen sogar in der Deformation ihrer Persönlichkeit? In der Kinder- und Jugendhilfe werden diese Fragen seit Jahrzehnten mit immer wieder wechselnden Vorzeichen heftig diskutiert. Nur auf wissenschaftlich belastbare Daten kann sich eigentlich niemand berufen. Bernhard Stadlers empirisch fundierte Studie zu dieser Thematik schliesst damit eine Forschungslücke und widerlegt so manches Vorurteil. Am Beispiel des Mädchenheims Gauting und seiner Arbeit mit dissozialen Mädchen zeigt er, in welchen Fällen freiheitsentziehende Massnahmen in der Jugendhilfe helfen können und wo nicht.

Er bezieht dazu subjektive Einschätzungen der Jugendlichen und ihrer Betreuer ebenso ein wie Testergebnisse, Interviews und die Diagnosen eines externen Instituts. Museums of the World Burns & Oates This spellbinding literary ghost story won raves when it was first published in 2000, with The Boston Globe hailing Bartholomew Crane as "a protagonist for the new millennium" and The New York Times declaring, "Everything about this dark, disquieting story confounds expectations." When hotshot young attorney Barth Crane is shipped off into the backwoods town of Murdoch, Ontario to try his first murder case, nothing is

as it seems. First of all, there are no bodies. Two teenage girls have disappeared and although their bodies have not been found, their English teacher has been arrested and charged with murder. Crane, a city lawyer with a burgeoning cocaine problem and disdain for the bumbling townspeople, is convinced he can successfully defend his client, Thomas Tripp, in the absence of hard evidence—let alone a body. But Tripp is not forthcoming with his lawyer and the locals are just as wary of Barth Crane as he is of them. And faced with increasing isolation and whispered legends of the town's infamous ghost—the Lady of the Lake—not to mention his own drug-fueled paranoia, Crane finds

himself less confident
 as the trial wears on
 and the lost girls
 demand to be heard . .
 . seemingly from
 beyond the grave.

 Do schools work
 differently in deprived
 and privileged
 neighbourhoods? As
 segregation is on the
 rise in many cities, this
 book explores how
 different
 neighbourhood
 contexts shape public
 organisations, by using
 an innovative approach
 that combines a
 Bourdieusian
 perspective and new
 institutional theory.
 Based on interviews
 and ethnographic data
 from two primary
 schools in Berlin,
 Germany, it shows how
 local social
 compositions, symbolic
 meanings of urban
 areas, and
 neighbourhood-based

policy interventions structure schools. Educational professionals adapt to these structural differences. The book analyses how teachers' understandings and practices vary by local context – and what that means for the reproduction of urban inequality.

Success New Society Publishers

Fabian Lorig develops a procedure model for hypothesis-driven simulation studies which supports the design, conducting, and analysis of simulation experiments. It is aimed at facilitating the execution of simulation studies with regard to the replicability and reproducibility of the results. In comparison to existing models, this

approach is based on a formally specified hypothesis. Each step of the simulation study can be adapted to the central hypothesis and performed in such a way that it can optimally contribute to the verification and thus to the confirmation or rejection of the hypothesis.

Improving the Consistency and Completeness of Safety Requirements Specifications Springer

The book presented here describes an outstanding attempt, not only to include children's views but to partner with children to develop the concept of well-being and to study the phenomenon as the children understand it. The authors do this by placing the concept of

children's well-being within the existing discourses on the topic and by developing their unique theoretical approach to the concept. Then, and based on what children told them, the authors identify different domains and dimensions of children's well-being and touch upon its multifaceted nature. The book concludes with drawing research and policy implications from an integrated summary of the study's findings and lists indicator concepts that present an alternative framework and conceptualisation of well-being from a child standpoint.

In the past few decades, scientists of

human nature—including experimental and cognitive psychologists, neuroscientists, evolutionary theorists, and behavioral economists—have explored the way we arrive at moral judgments. They have called into question commonplaces about character and offered troubling explanations for various moral intuitions. Research like this may help explain what, in fact, we do and feel. But can it tell us what we ought to do or feel? In *Experiments in Ethics*, the philosopher Kwame Anthony Appiah explores how the new empirical moral psychology relates to the age-old project of philosophical ethics. Some moral theorists

hold that the realm of morality must be autonomous of the sciences; others maintain that science undermines the authority of moral reasons. Appiah elaborates a vision of naturalism that resists both temptations. He traces an intellectual genealogy of the burgeoning discipline of "experimental philosophy," provides a balanced, lucid account of the work being done in this controversial and increasingly influential field, and offers a fresh way of thinking about ethics in the classical tradition. Appiah urges that the relation between empirical research and morality, now so often antagonistic, should be seen in terms of dialogue, not contest. And he shows how

experimental philosophy, far from being something new, is actually as old as philosophy itself. Beyond illuminating debates about the connection between psychology and ethics, intuition and theory, his book helps us to rethink the very nature of the philosophical enterprise.

Springer
Despite the increasing prominence of Klossowski's philosophical work, there exists no full-length or sustained treatment of his writings on Nietzsche. This study analyses Klossowski's semiotic of intensity as a conceptual foundation

for his philosophy and interpretation of Nietzsche, grounded in the central principles of his theory of signs. It then explores its implications for the categories of chance, causality, individuation and time, drawing a series of parallels between Klossowski's texts and the work of other scholars, such as McTaggart, Eco, D. Z. Albert, M. Silverstein, Meillassoux, N. Land and J. Stambaugh. Throughout, this work lends accessibility to Klossowski's often opaque and idiosyncratic style. It should be relevant to anyone interested in Klossowski's philosophical work, in contemporary Nietzsche scholarship, or in the 20th Century linguistic and existential Continental

tradition.

Tectum

Divided into two parts, this book examines the train of social theory from the 19th century, through to the 'organization of modernity', in relation to ideas of social planning, and as contributors to the 'rationalistic revolution' of the 'golden age' of capitalism in the 1950s and 60s. Part two examines key concepts in the social sciences. It begins with some of the broadest concepts used by social scientists: choice, decision, action and institution and moves on to examine the 'collectivist alternative': the concepts of society, culture and polity, which are often dismissed as untenable by postmodernists

today. This is a major contribution to contemporary social theory and provides a host of essential insights into the task of social science today.

After a series of strange mishaps, a desperate bookstore manager musters his staff for an overnight inventory. But when the last customer leaves and the staff is sealed in, they find out the bookstore is the doorway to hell.

Centralblatt für Eisenbahnen und Dampfschiffahrt in Oesterreich Springer Vieweg

This book provides new insights into the important field of Entrepreneurship Education. The editors pick up Fayolle's invitation: "How can we learn from

'institutional' culture?" and translate it to a variety of aspects of learning to start-up. From the perspective of Human Resource Education and Management (Wirtschaftspädagogik) the authors shed light into the socio-cultural system of entrepreneurship education. They start with mapping out its challenges. They discuss context factors like political regimes affecting entrepreneurial activities, consider goals including moral awareness, introduce ideas of modeling entre- and intrapreneurial competencies, suggest teaching-learning-strategies, discuss evaluation procedures and introduce case studies of

entrepreneurship education in different countries for different study levels. All in all this book stimulates and supports the challenges of educators, students, and practitioners (human resource managers, consultants, principals, teachers, and trainers) to introduce into the varying contexts of entrepreneurship education content specific, procedural, causal elements necessary for starting and maintaining an enterprise.

Modern societies rely

upon prodigious

amounts of oil for

transport activity. The

impacts over the near

term of increasing oil

scarcity and higher

prices on transport will

be among the major

challenges facing

humanity and will

require a revolution in

thinking about how we

move people and

goods. Transport

Revolutions analyzes

five prior episodes of

rapid and radical

change in the way

people and goods

travel. It examines the

worldwide state of

transport today,

especially its energy

use and impacts,

positive and negative.

The authors then show

how ample movement of people and freight could be sustained beyond 2025 with much-reduced dependence on oil, focusing on the United States and China. Preparations for the end of cheap oil include: Substantial use of electricity for land transport, particularly through direct powering of vehicles Use of wind to power water transport Radical changes in aviation Restructuring how transport is financed and managed Written for transport professionals, those with a business interest in transport, and planners and policymakers, this book will appeal to anyone with an interest in how transport will evolve in the years ahead. Richard Gilbert is a

consultant on transport and energy and the author of numerous books, including several for the Organization for Economic Cooperation and Development. Anthony Perl is a professor of political science and urban studies at Simon Fraser University. He has co-edited and co-authored four books, including *New Departures: Rethinking Rail Passenger Policy for the Twenty-First Century* and *The Integrity Gap: Canada's Environmental Policy and Institutions*.
