The global financial and economic crises have had a devastating impact on economic and social rights.

These rights were ignored by economic policy makers prior to the crises and continue to be disregarded in the current 'age of austerity'. This is the first book to focus squarely on the interrelationship between contemporary and historic economic and financial crises, the responses thereto, and the resulting impact upon economic and social rights. Chapters examine the obligations imposed by

such rights in terms of domestic and supranational crisis-related policy and law, and argue for a response to the crises that integrates these human rights considerations. The expert international contributors, both academics and practitioners, are drawn from a range of disciplines including law, economics, development and political science. The collection is thus uniquely placed to

address debates and developments from a range of disciplinary, geographical and professional perspectives.

The private employment agency industry has grown at an incredible pace over the past three decades due to the increasing need to provide workers and services to a growing and

flexible labour market. User enterprises hire temporary agency workers to be able to rapidly adjust to the shifting economic realities. Since mid-2008, enterprises have used this pressure-valve function to lay off temporary workers, while often leaving their core workforce intact.

Large supermarkets have come under pressure to improve the returns to</p>	<p>small producers and conditions of employment within their supply chains. But how effective is ethical sourcing? Can it genuinely address the problems facing workers and producers in the global food system? Is it a new form of northern protectionism or can southern initiatives be developed to create a more sustainable approach to ethical sourcing? How can the rights and</p>

participation of workers and small producers be enhanced, given the power and dominance of large supermarkets within the global food chain? What role can civil society and multistakeholder initiatives play in ensuring the effectiveness of ethical sourcing? This book brings together a range of academics and practitioners working on issues of ethical sourcing in

the global food system. It critically explores the opportunities and challenges in the ethical sourcing of food by combining analysis and case studies that examine a range of approaches. It explores whether ethical sourcing is a cosmetic northern initiative, or can genuinely help to improve the conditions of small producers and workers in the current global food system.

<p>"This landmark volume brings together leading scholars in the field to investigate recent conceptual shifts, research findings and policy debates on the informal economy as well as future challenges and directions for research and policy. Well over half of the global workforce and the vast majority of the workforce in developing countries work in the informal economy, and</p>	<p>in countries around the world new forms of informal employment are emerging. Yet the informal workforce is not well understood, remains undervalued and is widely stigmatized. Divided into three sets of chapters, this book focuses on specific groups of informal workers - homeworkers, street vendors and waste pickers-to provide a grounded reality to the disciplinary</p>	<p>debates. It calls for a paradigm shift in how the informal economy is perceived to reflect the realities of informal work in the global South as well as the informal practices of the State and Capital, not just Labour. Contributors to the volume bridge a range of disciplinary perspectives including anthropology, development economics, law, political science, social policy, sociology, statistics,</p>

From the back cover: The papers in this ground breaking book constitute a unique collection of information about the underground economy and how it is manifested in a variety of countries. Section One attempts to measure Canada's underground economic activity and

provides a specific estimate of the impact that tax changes have on its size. It also looks at the problems of tax evasion and tax avoidance. Section Two deals with the size of the underground substance economy, the legal aspects of the underground economy in the United States, and an assessment of the economic activities of the Mafia. Section Three analyzes the underground economy

abroad, specifically in the United States, Britain, Mexico, Peru, Chile, Russia and China. The fourth section returns to Canada and examines some policy implications of the underground economy. A survey detailed in Section One shows that a majority of Canadians believe that they do not receive enough benefits for the taxation they pay. Section Four offers a

<p>Publishing Innovation Design presents an approach to designing shared value for businesses, non-profit organizations, end-users and society. The societal and economic challenges we are currently facing – such as the aging population, energy scarcity and environmental issues – are not just threats but are also great opportunities for organizations. Innovation Design shows</p>	<p>how organizations can contribute to the process of generating value for society by finding true solutions to these challenges. And at the same time it describes how they can capture value for themselves in business ecosystems that care for both people and planet. This book covers: creating meaningful innovations that improve quality of life, engage users and provide</p>	<p>value for organizations and other stakeholders, guiding the creation of shared value throughout the innovation process, with a practical and integrative approach towards value that connects ideas from economics, psychology, sociology and ecology, designing new business models and business ecosystems to deliver sustainable benefits for all the involved parties and stakeholders,</p>

addressing both tangible and intangible value.

Innovation Design gives numerous examples of projects and innovations to illustrate some of the challenges and solutions you may encounter in your journey of designing meaningful innovations and creating shared value. It also offers practical methods and tools that can be applied directly in your own projects. And in a fast-changing

world, it provides a context, a framework and the inspiration to create value at every level: for people, for organizations and for the society in which we live. *Economic and Social Rights after the Global Financial Crisis* World Bank Publications Accounting Disrupted: How Digitalization is changing Finance delivers a powerful analysis of the new technological

forces buffeting the accounting profession and identifies key pathways to responding to the challenges. Al Bhimani, distinguished accountant, academic, and author, shows readers how established business fundamentals are being eclipsed and that accounting has not been spared. You'll learn: How the new realities of digitalization, including big data and AI, are affecting audit work

and financial management practices How learning fast about and from more diverse data sources is essential to the new accounting environment Why accounting information must start to speak to what will take place rather than about financial activities that have occurred What finance must do in a world of changing risks, data growth, fast digitization, and increased regulation The author makes

a compelling case that accounting now faces a crunch: it needs to reshape itself from the core because conventional financial analysis is proving too cumbersome and slow for executives in digitalized organizations. In a straightforward and illustrated style packed with case studies and practical examples, he shows readers how big data, blockchain, robotic process

automation, and artificial intelligence, can help accountants adapt to new realities. Perfect for finance leaders in both the private and public sectors, Accounting Disrupted also belongs on the bookshelves of accounting students who wish to better prepare for the technological and professional environment in which they'll shortly find themselves. *OECD*

 "... an important intervention in the conversation around social and ecological sustainability that draws on both micromarketing and macromarketing scholarship to help the reader understand the challenges with illustrations from insightful cases both from emerging and developed economies. This compilation should be essential

reading for the discerning student of sustainable consumption and production." -- Professor Pierre McDonagh, Associate Editor, Journal of Macromarketing (USA); Professor of Critical Marketing & Society, University of Bath, UK
 Experts in the field of economics, management science, and particularly in the marketing domain have always been interested in and

<p>acknowledged the importance of sustaining profitable businesses while incorporating societal and environmental concerns; however, the level of existing literature and availability of teaching cases reflect a dearth of real case studies, especially those focused on marketing for social good. This book of actual case studies will address that need. In addition, this book is important and</p>	<p>timely in providing a case book for instructors (those in both industry and academia) to help them in teaching and training the next generation of leaders through corporate training and universities. Currently, marketing for social good is increasingly becoming a part of most curriculums under the umbrella of different titles, such as social marketing, green marketing, and</p>	<p>sustainability marketing. The relevance of these studies is increasing across the globe. This book is composed of long and short real cases with varying complexity in different sectors. This case book will also cover some review articles for an overview of the recent developments in the study area. With these case studies, collections of questions, teaching materials, and real-life</p>

marketing scenarios, this book offers a unique source of knowledge to marketing professionals, students, and educators across the world. The main objective of this case book is to understand the applicability of marketing science (marketing for social good context, such as social marketing and sustainability marketing) in internet marketing related to e-buying behavior and e-WOM. In

addition, it illustrates the various types of existing marketing practices that are relevant from both theoretical and practical points of view in this electronic era, as well as discussing other non-electronic marketing practices and focusing on consumer buying behavior. As a result, marketing managers can treat their customers according to their desired value. This book

particularly explores the possibilities and advantages created by social marketing and sustainability marketing through the presentation of thorough review articles and case studies. This case book helps corporate training centers and universities with compact teaching reference materials in their relevant courses.

<p>Times are changing and the labor markets are under immense burden from the collective effects of various megatrends. Technological growth and grander incorporation of economies along with global supply chains have been an advantage for several workers armed with high skills and in growing occupations. However, it is a challenge for workers with low or obsolete skills</p>	<p>in diminishing zones of employment. Business models that are digitalized hire workers as self-employed instead of standard employees. People seem to be working and living longer, but they experience many job changes and the peril of skills desuetude. Inequalities in both quality of job and earnings have increased in several countries. The depth and pace of digital</p>	<p>transformation will probably be shocking. Industrial robots have already stepped in and artificial intelligence is making its advance too. Globalization and technological change predict the great potential for additional developments in labor market performance. But people should be ready for change. A progression of creative annihilation is probably under way, where some</p>

chores are either offshored or given to robots. A better world of for jobs cannot be warranted – a lot will be contingent on devising the right policies and institutes in place.

This compilation of 22 firm-specific case studies is an important contribution to the discussion of 'servicification' trends in manufacturing . 'Services

have increased in importance and value in many manufacturing value chains, making companies that produce physical products look more like service enterprises.

What services do global value chains use in their operations, how important are they and how do economic policies shape firms' configurations , operations, and location of global value chains? This book

addresses these questions and more. The interviewed firms, based in 12 APEC economies, come from different sectors ranging from multinational automotive, construction equipment, and electrical appliance manufacturers to small and medium manufacturers of watches or chemical for water treatment. The book analyses what specific services are important in different

stages of the value chain, and whether they are typically provided in-house or outsourced.
