Your Strategy Needs a Strategy Createspace Independent Publishing Platform  
Research Paper (postgraduate) from the year 2020 in the subject Business economics - Business Management, Corporate Governance, , course: Management, language: English, abstract: The study examined the impact of strategic management on economic development in Nigeria: a study of the oil sector. It further probed into how this has impacted on the management efficiency and effectiveness as strategic planning is essential in corporate organisations. Primary and secondary data were used for the study. The study made use of questionnaire to elicit information from employees in the oil sector. Data collected were analysed using descriptive and inferential statistics. The hypotheses were tested using the Pearson's Product Moment Correlation Coefficient to establish the significance of relationship between the various variables used in measuring performance. The results of the hypotheses revealed that there is a significant and positive correlation between strategic management and economic development in Nigeria. The study therefore, concludes that strategic planning is beneficial to organisations in achieving set goals and recommends that oil companies and other corporate organisations alike, should engage in strategic management in order to enhance economic development in Nigeria.

This paper analyzes the continuing threat of a serious oil supply disruption and readiness of the U.S. to cope with such a development. Chapter One examines current perceptions of the likelihood of another oil crisis. It argues that these perceptions are critically flawed by an inadequate conceptual understanding of the nature of vulnerability. Chapter Two traces the U.S. response to the 1973-74 and 1978-79 oil crises and surveys the prospects for a future oil crisis. Chapter Three evaluates the present oil glut in relation to the U.S. long-term programs to reduce oil vulnerability. It examines the effect that a new complacency attitude arising from the appearance of surplus may have on efforts to promote policies to avert a future crisis. Chapter Four examines the different contingencies that the U.S. could possibly face as a result of oil dependence. Chapter Five examines U.S. national goals and the linkage between goals and policy. Chapter Six proposes a strategy of attainment to reduce U.S. vulnerability to future oil disruptions. Such a strategy would address both the short and long-term problems that face American strategic planners concerned with the oil issue.

In all the industries in which I do management consulting, each manager considers his own industry to be truly "unique. " Of course, each is different in some respects, and each has its own

quirks and features. However, the similarities among in dustries far outweigh the differences. The critical dynamics and the management issues have a great deal in common. However, there are, I believe, two industries (or segments of industries) that have an important critical uniqueness that does distinguish them from the rest. One of these is the exploration for undiscovered natural resources, notably for oil and gas; the other is research. In these two in dustry segments, the competition is not nearly so much one firm against another as it is each firm against "nature," or-if you prefer-against the unknown. This uniqueness not only sets these two industry segments apart from the rest, it also helps us to see what they have in common with each other: - Pure scientific talent, ability, and genius have direct commercial value. - We do not have the zero sum game of competition in the market place. A discovery by one firm does not usually perceptably lessen the opportunity of a "competitor" for a discovery. On the contrary, a discovery by one firm usually increases the knowledge of the whole industry, increasing com petitors' opportunity for discovery. - We see the source of continuing life for the rest of the firm.

You think you have a winning strategy. But do you? Executives are bombarded with bestselling ideas and best practices for achieving competitive advantage, but many of these ideas and practices contradict each other. Should you aim to be big or fast? Should you create a blue ocean, be adaptive, play to win—or forget about a sustainable competitive advantage altogether? In a business environment that is changing faster and becoming more uncertain and complex almost by the day, it's never been more important—or more difficult—to choose the right approach to strategy. In this book, The Boston Consulting Group's Martin Reeves, Knut Haanaes, and Janmejaya Sinha offer a proven method to determine the strategy approach that is best for your company. They start by helping you assess your business environment—how unpredictable it is, how much power you have to change it, and how harsh it is—a critical component of getting strategy right. They show how existing strategy approaches sort into five categories—Be Big, Be Fast, Be First, Be the Orchestrator, or simply Be Viable—depending on the extent of predictability, malleability, and harshness. In-depth explanations of each of these approaches will provide critical insight to help you match your approach to strategy to your environment, determine when and how to execute each one, and avoid a potentially fatal mismatch. Addressing your most pressing strategic challenges, you'll be able to answer questions such as:

- What replaces planning when the annual cycle is obsolete? •

When can we—and when should we—shape the game to our advantage? • How do we simultaneously implement different strategic approaches for different business units? • How do we manage the inherent contradictions in formulating and executing different strategies across multiple businesses and geographies? Until now, no book brings it all together and offers a practical tool for understanding which strategic approach to apply. Get started today.

Turnaround Management for the Oil, Gas, and Process Industries: A Project Management Approach helps readers understand the phases of development in preparation for a turnaround, with each relevant phase easily identified. Specific to the process industry, especially oil and gas, petrochemical and power plants, this reference simplifies the entire lifecycle of a turnaround and provides specific examples of both successful and unsuccessful turnaround projects. By identifying the most significant performance indicators and strategies to ensure that targets are met, this book will help plant managers keep plants safe, efficient and running successfully. Aligns turnaround project management with ISO guidance and ANSI/PMI standards Utilizes the best tools for long-term planning, including instructional videos and training material Helps users gain practical knowledge through both good and bad turnaround management case studies Presents real-world issues and challenges encountered

#### **A Guide to Strategic Planning for the Inland Barge and Towing Industry** GRIN Verlag

This publication describes the major components of the research and development programs of the Department of Energy's Office of Natural Gas and Petroleum Technology. These programs are

commonly referred to collectively as the 'Oil and Gas Program.' This document provides customers with a single source of information describing the details of the individual technology program components. This document reflects the results of a planning cycle that began in early 1996 with the development of a scenario analysis for the programs, followed by the development of the coordinated strategic plan. The technology program plans, which are the most recent products of the planning cycle, expand on the program descriptions presented in the coordinated strategic plan, and represent an initial effort to coordinate the Oil and Gas Program exploration and production programs and budgets. Each technology program plan includes a 'roadmap' that summarizes the progress of the program to the present and indicates its future direction. The roadmaps describe the program drivers, vision, mission, strategies, and measures of success. Both the individual technology program plans and the strategic plan are dynamic and are intended to be updated regularly.

Northern Oil and Gas Action Programs (NOGAP) exist within the government because the impacts of oil and gas development on the environment of the northern Mackenzie Region must satisfy federal government objectives for sustainable development. The program has focused research on those areas of scientific inquiry that deal specifically and directly with hydrocarbon development, thus creating difficulty for researchers accustomed to dealing with long-term goals designed to address major gaps in knowledge common to remote, northern areas. This paper addresses the need for a program vision or strategy for NOGAP work from which future research in various disciplines can flow. It provides background information on the program and describes the Inland Waters Directorate's environmental philosophy and its Mackenzie Delta flow and sediment studies. Detailed information is given on the hydrodynamic, one-dimensional model developed, including the relevance of the model to NOGAP. The paper concludes with a discussion of the present status of IWD research related to NOGAP, future directions for IWD NOGAP programs, and future NOGAP work proposals for IWD.

Since 2003, the United States has provided several billion dollars in reconstruction funds to help rebuild Iraq oil and electricity sectors, which are crucial to rebuilding Iraq's economy. For example, oil export revenues account for over half of Iraq's gross domestic product and over 90 percent of government revenues. The U.S. rebuilding program was predicated on three key assumptions: a permissive security environment, the ability to restore Iraq's essential services to prewar levels, and funding from Iraq and international donors. This report addresses (1) the funding made available to rebuild Iraq's oil and electricity sectors, (2) the U.S. goals for these sectors and progress in achieving these goals, and (3) the key challenges the U.S. government faces in these efforts.
