 International phenomenon Angie Thomas revisits Garden Heights seventeen years before the events of The Hate U Give in this searing and poignant exploration of Black boyhood and manhood. A Printz Honor Book! If there's one thing seventeen-year-old Maverick Carter knows, it's that a real man takes care of his family. As the son of a former gang legend, Mav does that the only way he knows how: dealing for the King Lords. With this money he can help his mom, who works two jobs while his dad's in prison. Life's not perfect, but with a fly girlfriend and a cousin who always has his back, Mav's got everything under control. Until, that is, Maverick finds out he's a father. Suddenly he has a baby, Seven, who depends on him for everything. But it's not so easy to sling dope, finish school, and raise a child. So when he's offered the chance to go straight, he takes it. In a world where he's expected to amount to nothing, maybe Mav can prove he's different. When King Lord blood runs through your veins, though, you can't just walk away. Loyalty, revenge, and responsibility threaten to tear Mav apart, especially after the brutal murder of a loved one. He'll have to figure out for himself what it really means to be a man.

 The seventeen equations that form the basis for life as we know it. Most people are familiar with history's great equations: Newton's Law of Gravity, for instance, or Einstein's theory of relativity. But the way these mathematical breakthroughs have contributed to human progress is seldom appreciated. In In Pursuit of the Unknown, celebrated mathematician Ian Stewart untangles the roots of our most important mathematical statements to show that equations have long been a driving force behind nearly every aspect of our lives. Using seventeen of our most crucial equations -- including the Wave Equation that allowed engineers to measure a building's response to earthquakes, saving countless lives, and the Black-Scholes model, used by bankers to track the price of financial derivatives over time -- Stewart illustrates that many of the advances we now take for granted were made possible by mathematical discoveries. An approachable, lively, and informative guide to the mathematical building blocks of modern life, In Pursuit of the Unknown is a penetrating exploration of how we have also used equations to make sense of, and in turn influence, our world.

 Beschreibung I ask the indulgence of the children who may read this book for dedicating it to a grown-up. I have a serious reason: he is the best friend I have in the world. I have another reason: this grown-up understands everything, even books about children. I have a third reason: he lives in France where he is hungry and cold. He needs cheering up. If all these reasons are not enough, I will dedicate the book to the child from whom this grown-up grew. All grown-ups were once children-- although few of them remember it. And so I correct my dedication: To Leon Werth when he was a little boy Once when I was six years old I saw a magnificent picture in a book, called True

Stories from Nature, about the primeval forest. It was a picture of a boa constrictor in the act of swallowing an animal. Here is a copy of the drawing. In the book it said: "Boa constrictors swallow their prey whole, without chewing it. After that they are not able to move, and they sleep through the six months that they need for digestion."

In Pursuit of the Unknown HarperCollins UK
 Before he died at the age of twenty, shot in a mysterious early-morning duel at the end of May 1832, Evariste Galois created mathematics that changed the direction of algebra. This book contains English translations of almost all the Galois material. The translations are presented alongside a new transcription of the original French and are enhanced by three levels of commentary. An introduction explains the context of Galois' work, the various publications in which it appears, and the vagaries of his manuscripts. Then there is a chapter in which the five mathematical articles published in his lifetime are reprinted. After that come the testamentary letter and the first memoir (in which Galois expounded on the ideas that led to Galois Theory), which are the most famous of the manuscripts. These are followed by the second memoir and other lesser known manuscripts. This book makes available to a wide mathematical and historical readership some of the most exciting mathematics of the first half of the nineteenth century, presented in its original form. The primary aim is to establish a text of what Galois wrote. The details of what he did, the proper evidence of his genius, deserve to be well understood and appreciated by mathematicians as well as historians of mathematics.

A seventeen-year-old from Jerusalem, Tal Levine comes from a family that always believed peace would come to the Middle East. She cried tears of joy when President Clinton and Yitzhak Rabin shook hands with Yasser Arafat in 1993-a moment of hope that would stay with her forever. But when a terrorist explosion kills a young woman at a café in Jerusalem, something changes for Tal. One day she writes a letter, puts it in a bottle, and sends it to Gaza-to the other side-beginning a correspondence with a young Palestinian man that will ultimately open their eyes to each other's lives and hearts.

 The book provides a broad overview of the challenges and recent developments in the field of smart mobility and transportation, including technical, algorithmic and social aspects of smart mobility and transportation. It reviews new ideas for services and platforms for future mobility. New concepts of artificial intelligence and the implementation in new hardware architecture are discussed. In the context of artificial intelligence, new challenges of machine learning for autonomous vehicles and fleets are investigated. The book also investigates human factors and social questions of future mobility concepts. The goal of this book is to provide a holistic approach towards smart transportation. The book reviews new technologies such as the cloud, machine learning and communication for fully atomatized transport, catering to the needs of citizens. This will lead to complete change of concepts in transportion.

The Immortals BoD - Books on Demand
 An old man walks along deserted railway tracks, long since unused and overgrown; beside him a young, feral boy helps him along. It has been 60 years since the great Red Death wiped out mankind, and the handful of survivors from all walks of life have established their own civilization and their own hierarchy in a savage world. Art, science, and all learning has been lost, and the young descendants of the healthy know nothing of the world that was—nothing but myths and make-believe. The old man is the only one who can convey the wonders of that bygone age, and the horrors of the plague that brought about its end. What future lies in store for the remnants of mankind can only be surmised—their ignorance, barbarity, and ruthlessness the only hopes they have. This cataclysmic tale remains a terrifying prophecy of the perils of globalization, which are

all too pertinent today.
