Environmental  
educators face a  
formidable challenge  
when they approach  
climate change due to  
the complexity of the  
science and of the  
political and cultural  
contexts in which

people live. There is a  
clear consensus among  
climate scientists that  
climate change is  
already occurring as a  
result of human  
activities, but high  
levels of climate  
change awareness and  
growing levels of  
concern have not  
translated into  
meaningful action.  
Communicating  
Climate Change  
provides  
environmental  
educators with an  
understanding of how  
their audiences engage  
with climate change  
information as well as  
with concrete,  
empirically tested  
communication tools  
they can use to  
enhance their climate  
change program.  
Starting with the basics  
of climate science and  
climate change public  
opinion, Armstrong,

Krasny, and Schuldt synthesize research from environmental psychology and climate change communication, weaving in examples of environmental education applications throughout this practical book. Each chapter covers a separate topic, from how environmental psychology explains the complex ways in which people interact with climate change information to communication strategies with a focus on framing, metaphors, and messengers. This broad set of topics will aid educators in formulating program language for their classrooms at all levels. *Communicating Climate Change* uses fictional vignettes of climate change

education programs and true stories from climate change educators working in the field to illustrate the possibilities of applying research to practice. Armstrong et al, ably demonstrate that environmental education is an important player in fostering positive climate change dialogue and subsequent climate change action. Thanks to generous funding from Cornell University, the ebook editions of this book are available as Open Access from Cornell Open ([cornellpress.cornell.edu/cornell-open](http://cornellpress.cornell.edu/cornell-open)) and other Open Access repositories. *General Climatology* Prentice Hall *Climate Change and Cities* bridges science-to-action for climate

change adaptation and mitigation efforts in cities around the world. *Climate Change and Cities* Springer Nature This open access book not only describes the challenges of climate disruption, but also presents solutions. The challenges described include air pollution, climate change, extreme weather, and related health impacts that range from heat stress, vector-borne diseases, food and water insecurity and chronic diseases to malnutrition and mental well-being. The influence of humans on climate change has been established through extensive published evidence and reports. However, the connections between climate change, the health of the planet and the

impact on human health have not received the same level of attention. Therefore, the global focus on the public health impacts of climate change is a relatively recent area of interest. This focus is timely since scientists have concluded that changes in climate have led to new weather extremes such as floods, storms, heat waves, droughts and fires, in turn leading to more than 600,000 deaths and the displacement of nearly 4 billion people in the last 20 years. Previous work on the health impacts of climate change was limited mostly to epidemiologic approaches and outcomes and focused less on

multidisciplinary, multi-faceted collaborations between physical scientists, public health researchers and policy makers. Further, there was little attention paid to faith-based and ethical approaches to the problem. The solutions and actions we explore in this book engage diverse sectors of civil society, faith leadership, and political leadership, all oriented by ethics, advocacy, and policy with a special focus on poor and vulnerable populations. The book highlights areas we think will resonate broadly with the public, faith leaders, researchers and students across disciplines including the humanities, and policy makers.

 The need for effective  
 communication, public  
 outreach and  
 education to increase

support for policy,  
 collective action and  
 behaviour change is  
 ever present, and is  
 perhaps most pressing  
 in the context of  
 anthropogenic climate  
 change. This book is  
 the first to take a  
 comprehensive look at  
 communication and  
 social change  
 specifically targeted to  
 climate change. It is a  
 unique collection of  
 ideas examining the  
 challenges associated  
 with communicating  
 climate change in  
 order to facilitate  
 societal response. It  
 offers well-founded,  
 practical suggestions  
 on how to  
 communicate climate  
 change and how to  
 approach related social  
 change more  
 effectively. The  
 contributors of this  
 book come from a  
 diverse range of

backgrounds, from government and academia to non-governmental and civic sectors of society. The book is accessibly written, and any specialized terminology is explained. It will be of great interest to academic researchers and professionals in climate change, environmental policy, science communication, psychology, sociology and geography.
