This book introduces the vast topic of Indian philosophy. It begins with a study of the major Upanishads, and then surveys the philosophical ideas contained in the Bhagavadgita. After a short excursion into Buddhism, it summarizes the salient ideas of the six systems of Indian philosophy: Nyaya, Vaisheshika, Samkhya, Yoga, Purva Mimamsa, and Vedanta. It concludes with an introduction to contemporary Indian thought.

A coloring book to familiarize the user with the Primary elements in the Periodic Table. The Periodic Table Coloring Book (PTCB) was received worldwide with acclaim. It is based on solid, proven concepts. By creating a foundation that is applicable to all science ("Oh yes, Hydrogen, I remember coloring it, part of water, it is also used as a fuel; I wonder how I could apply this to the vehicle engine I am studying...") and creating enjoyable memories associated with the elements science becomes accepted. These students will be interested in chemistry, engineering and other technical areas and will understand why those are important because they have colored those elements and what those elements do in a non-threatening environment earlier in life.

Chemical word scrambles are an exciting new form of word puzzles. You don't need to know any chemistry! These chemical word scrambles will appeal to all word puzzle lovers, whether or not they also enjoy science. Each word is composed of symbols from the periodic table, instead of letters; but you don't need to be familiar with the periodic table to solve the word scrambles. Here is an example: The words BRaIn PoWEr are composed of the following symbols for chemical elements: B for boron, Ra for radium, In for indium, Po for polonium, W for tungsten, and Er for erbium. In chemical word scrambles, the words have been scrambled by rearranging the symbols - not the letters. Symbols that have two letters - like He for helium and Nd for neodymium - can't be split or have their letters reordered. This creates a significant distinction between ordinary word scrambles and chemical word scrambles. For example, the symbols Er, V, S, and Es may be combined to form the word SErVEs, but not the word SEVERs because symbols would have to be split to form SEVERs. One neat difference between ordinary word scrambles and chemical word scrambles is that

chemical word scrambles allow us to make use of a vocabulary of longer words without effectively increasing the difficulty of the puzzle. For example, the word VErBAI is a 6-letter word, but only a 4-symbol word. When trying to rearrange the symbols Al, Er, B, and V to form the word VErBAI, there are fewer permutations to consider compared to rearranging the 6 letters A, l, e, r, b, and v to form the word verbal. We saw this as an excellent opportunity to make word scramble puzzles that involve a vocabulary of longer words. The level of difficulty of this Chemical Word Scrambles puzzle book is MEDIUM. This book involves words that mostly have 5 to 6 symbols, and therefore 5 to 12 letters; all of the challenge words of this MEDIUM book have 6 symbols. (There is also an EASY book with 4 to 5 symbol words, and a HARD book with 7 to 9 symbols. Puzzlers who can solve harder word scrambles may want to begin with the EASY volume to get the hang of unscrambling words in terms of chemical symbols before moving onto MEDIUM or HARD.) Each puzzle features a challenge word made by rearranging the first symbol of each word. A unique feature of this book is that there is a Hints section at the back separate from the Answers section, for puzzlers who may be stuck and want to check just the first letter of the solution.

VErBAI ReAcTiONS are a new form of word scrambles with a chemical flavor. You don't need to know any science to be able to solve VErBAI ReAcTiONS puzzles, but the puzzles bear a resemblance to chemical reactions. EXAMPLE: Here is a sample: $\text{Es} + 2\text{S} + \text{P} + \text{Si} + 2\text{O} + \text{N} \rightarrow \underline{\hspace{1cm}}$. This VErBAI ReAcTiON is a word scramble consisting of one Es, two S's, one P, one Si, two O's, and one N. That is, the word scramble contains the elements Es, S, S, P, Si, O, O, and N. Unscramble these elements to form an 8-symbol word (that's why there are 8 blanks in the puzzle). ANSWER: For this puzzle, the answer is P O S S Es Si O N (possession). These VErBAI ReAcTiONS resemble chemical reactions in two ways. First, the scrambled elements appear added together on the left of the reaction with coefficients (like the number 2 in the puzzle above) telling you how many of each element the solution contains, and you fill in the result of the VErBAI ReAcTiON by rearranging the elements and writing them on the blanks on the right side of the reaction. Secondly, all of the solutions are chemical words. A chemical word is a word that can be made using symbols from the periodic table. For example, the chemical word POSSEsSiON is made using the symbols for phosphorus (P), oxygen (O), sulfur (S), Einsteinium (Es), silicon (Si), and nitrogen (N). You don't need to be familiar with the periodic table to solve these problems; nor do you need to know any

chemistry. You just need to be able to count and unscramble elements to make words. This 'Easy' volume consists of words with 4 to 5 symbols, which involves familiarity with common 4 to 10 letter words. Other 'Medium' and 'Hard' volumes consist of longer words. A unique feature of this book is that there is a Hints section at the back separate from the Answers section, for puzzlers who may be stuck and want to check just the first letter of the solution. MORE EXAMPLES: (1) $\text{S} + \text{Ni} + \text{Ge} + \text{U} \rightarrow \underline{\hspace{1cm}}$. (2) $2\text{C} + \text{N} + 2\text{I} + \text{P} \rightarrow \underline{\hspace{1cm}}$. (3) $\text{Ti} + \text{C} + \text{Cr} + \text{P} + \text{Y} \rightarrow \underline{\hspace{1cm}}$. (4) $2\text{C} + \text{U} + 2\text{S} + \text{Es} \rightarrow \underline{\hspace{1cm}}$. You can find the answers below. Note that this easy volume consists of chemical words with 4 to 5 symbols. We recommend starting with our easy puzzles before tackling the medium or hard puzzles (available in separate volumes). ANSWERS: (1) GeNiUS (2) PICNIC (3) CrYPTiC (4) SUCCEsS.

From New York Times bestselling author Sam Kean comes incredible stories of science, history, finance, mythology, the arts, medicine, and more, as told by the Periodic Table. Why did Gandhi hate iodine (I, 53)? How did radium (Ra, 88) nearly ruin Marie Curie's reputation? And why is gallium (Ga, 31) the go-to element for laboratory pranksters?* The Periodic Table is a crowning scientific achievement, but it's also a treasure trove of adventure, betrayal, and obsession. These fascinating

tales follow every element on the table as they play out their parts in human history, and in the lives of the (frequently) mad scientists who discovered them. *THE DISAPPEARING SPOON* masterfully fuses science with the classic lore of invention, investigation, and discovery--from the Big Bang through the end of time. *Though solid at room temperature, gallium is a moldable metal that melts at 84 degrees Fahrenheit. A classic science prank is to mold gallium spoons, serve them with tea, and watch guests recoil as their utensils disappear.

BANNED: *The Golden Book of Chemistry Experiments* was a children's chemistry book written in the 1960s by Robert Brent and illustrated by Harry Lazarus, showing how to set up your own home laboratory and conduct over 200 experiments. The book is controversial, as many of the experiments contained in the book are now considered too dangerous for the general public. There are apparently only 126 copies of this book in libraries worldwide. Despite this, it's known as one of the best DIY chemistry books ever published. The book was a source of inspiration to David Hahn, nicknamed "the Radioactive Boy Scout" by the media, who tried to collect a sample of every chemical element and also built a model nuclear reactor (nuclear reactions however are not covered in this book), which led to the involvement of the authorities. On the other hand, it has also been the inspiration for many children who went on to get advanced degrees and productive chemical careers in industry or academia.
