The flying public, airlines, and governments will all agree on one date that changed commercial flying: that was September 11, 2001. The first edition of *Aviation Law: Cases, Laws and Related Sources*, described early consequences of that event, particularly compensation of

victims and early tightening of aviation security. Subsequently laws and regulations affecting all aspects of aviation changed so rapidly that it became difficult to set a cut-off date for the second edition. The rapid flow of events made an update urgent. Several gaps in the materials of the first edition became evident as the book was used. The authors filled those gaps, pruned old materials and added much new material describing not only the later developments, but also evolving economics and flight technology. The objective of the case book is to offer a basic handbook for air law practitioners providing them with a starting point for almost any subject they may encounter.

Informed consent - the process of communication between a patient or research subject and a physician or researcher that results in the explicit agreement to undergo a specific medical intervention - is an ethical concept based on the principle that all patients and research subjects should understand and agree to the potential consequences of the clinical care they receive. Regulations that govern the attainment of informed consent for treatment and research are crucial to ensuring that medical care and research are conducted in an ethical manner and with the utmost respect for individual preferences and dignity. These

regulations, however, often require - or are perceived to require - that informed consent documents and related materials contain language that is beyond the comprehension level of most patients and study participants. To explore what actions can be taken to help close the gap between what is required in the informed consent process and communicating it in a health-literate and meaningful manner to individuals, the Institute of Medicine's Roundtable on Health Literacy convened a one-day public workshop featuring presentations and discussions that examine the implications of health literacy for informed consent for both research involving human subjects and treatment of patients. Topics covered in this workshop included an overview of the ethical imperative to gain informed consent from patients and research participants, a review of the current state and best practices for informed consent in research and treatment, the connection between poor informed consent processes and minority underrepresentation in research, new approaches to informed consent that reflect principles of health literacy, and the future of informed consent in the

treatment and research settings. Informed Consent and Health Literacy is the summary of the presentations and discussion of the workshop. *Eli Lilly and Beyond* Martinus Nijhoff Publishers
International investment arbitration remains one of the most controversial areas of globalisation and international law. This book provides a fresh contribution to the debate by adopting a thoroughly empirical approach. Based on new datasets and a range of quantitative, qualitative and computational methods, the contributors interrogate claims and counter-claims about the regime's legitimacy. The result is a nuanced picture about many of the critiques lodged against the regime, whether they be bias in arbitral decision-making, close relationships between law firms and arbitrators, absence of arbitral diversity, and excessive compensation. The book comes at a time when several national and international initiatives are under way to reform international investment arbitration. The authors discuss and analyse how the regime can be reformed and how a process of legitimation might

occur. *Blaming the Brain* Cambridge University Press

Knowledge management (KM) is probably the first major management trend to identify information and its management as a crucial element in the success of an organization. In order for information professionals to participate fully in KM initiatives, or to be able to take advantage of the concept to improve the effective application of their skills, both the professionals and management need a good understanding of the KM approach and the information related roles within that framework. This book focuses on the potential role of the information professional in the KM environment and, using plenty of case studies, considers: the knowledge context - creating

knowledge based environments in a range of sectors powering information: the role of information skills in KM. Readership: This book will make topical reading not only for those seeking career development through KM but for all information professionals wondering exactly what it is and how it will affect their work. LIS graduates and postgraduates will also be potential readers. Published in association with TFPL Ltd TFPL Ltd have been researching KM since 1996 and have monitored developments in Europe and the USA. The Role of International Intellectual Property Treaties in Establishing Legitimate Expectations in Investor-State Dispute Settlement McGraw-Hill/Irwin

This incisive book explores the ways in which the major notions of fairness, morality and ordre public can be used both to justify and to limit intellectual property rights. Written by an international team of experts in the field, it provides varied and sometimes divergent perspectives on how

these notions are applied to different rights and in different contexts. *Text and Cases in Cross-Border Management* Bloomsbury Publishing

European Intellectual Property Law offers a full account of the main areas of substantive European IP law and a discussion of their wider context and effect. The amount and reach of European law, and decision-making in the field of intellectual property has grown exponentially since the 1960s, making it increasingly difficult to treat European law as an adjunct to domestic intellectual property regimes. European Intellectual Property Law responds to this reality by presenting a clear and detailed account of each of the main areas of substantive EU intellectual property law, situated in the context of both the EU legal system and international IP law, including EU constitutional law, the law of the European Patent Convention 1973/2000, and private international law. It draws selectively on examples from domestic IP regimes to illustrate substantive differences between those regimes and to demonstrate the impact of European law, and decision-making on EU Member States. This unique,

thoroughly modern approach goes beyond a discussion of the provisions of European legal instruments to consider their wider context and effect. European Intellectual Property Law is the ideal guide for any student wishing to gain a full and critical understanding of the substantive European law of intellectual property. *A Review of Selected Federal Vaccine and Immunization Policies* DIANE Publishing

Group litigation has been recognised by political scientists in the States as a useful method of gaining ground and attracting publicity for pressure groups since the turn of the century. In Britain however, recognition that the courts fill such a role has come more slowly. Despite this lack of recognition, pressure through law is far from a modern phenomenon. As the authors show, such cases can be identified in Britain as early as 1749 when abolitionists used the court to test conflicting views of slavery in common law. This book looks at the extent to which pressure groups in Britain use litigation, presenting a view of the courts as a target for campaigners and a vehicle for

campaigning. It begins with a description of the tradition of pressure through law in Britain, tracing the development of a parallel tradition in the United States, which has been influential in shaping current British attitudes. The authors analyse the significance of the political environment in Britain in test-case strategy. In contrast with America, Britain has no written constitution and no Bill of Rights and its lack of Freedom of Information legislation makes both litigation and the monitoring of its effects very difficult. However, the centralised character of the British government means that the effects of lobbying are rather more visible in the corridors of power. The authors examine a large number of case studies in order to analyse current practice, and they look at the rapidly changing European and international scene, discussing transnational law, the European community and the Council of Europe. They also look at the campaign tactics of global organisations such as Amnesty and Greenpeace. Carol Harlow and Richard Rawlings are experienced in public law and familiar with political science literature. They are therefore able

to relate legal systems to the political process, in a book designed to be accessible and important to lawyers, to political scientists and to lobby group activists.

In June 1993 a clinical trial of fialuridine (FIAU), a promising new medication for hepatitis B, was abruptly terminated when one of the 15 out-patients participating in the National Institutes of Health (NIH) study was suddenly hospitalized with liver failure. Although all the remaining patients were contacted and told to stop taking their medication, six more subsequently developed severe toxicity. Five patients died, and two others were probably saved from death only by having liver transplants. In response to a request from the Secretary of the Department of Health and Human Services, the IOM committee has analyzed the FIAU clinical trials, making recommendations for additional safeguards for the conduct of future clinical trials. This evaluation included the review of documents pertaining to investigational new drug submissions, protocols and consent forms from other

clinical trials, as well as information available from other clinical and preclinical experience with compounds related to FIAU and its parent drug, fiacitibine (FIAC), which is metabolized to FIAU. The committee does not seek to affix responsibility for the adverse outcome of this NIH trial, but instead focuses on whether any rules or procedures governing the clinical trials process itself need to be changed, and if so, what burdens or costs such changes might place on future clinical trials.

This volume explores the nature of intellectual property law by looking at particular disputes. All the cases gathered here aim to show the versatile and unstable character of a discipline still searching for landmarks. Each contribution offers an opportunity to raise questions about the narratives that have shaped the discipline throughout its short but profound history. The volume begins by revisiting patent litigation to consider the impact of the Statute of Monopolies (1624). It continues looking at different controversies to describe how the

existence of an author's right in literary property was a plausible basis for legal argument, even though no statute expressly mentioned authors' rights before the Statute of Anne (1710). The collection also explores different moments of historical significance for intellectual property law: the first trade mark injunctions; the difficulties the law faced when protecting maps; and the origins of originality in copyright law. Similarly, it considers the different ways of interpreting patent claims in the late nineteenth and twentieth century; the impact of seminal cases on passing off and the law of confidentiality; and more generally, the construction of intellectual property law and its branches in their interaction with new technologies and marketing developments. It is essential reading for anyone interested in the development of intellectual property law. G006565, Appellant's Opening National Academies Press
TRANSNATIONAL MANAGEMENT focuses on the management challenges associated with developing strategies and managing the operations of companies whose activities stretch across national

boundaries. The purpose of this book is to provide a conceptual framework of the interplay between the multinational corporation, the countries in which it does business, and the competitive environment in which it operates. Through text narrative, cases, and readings, the authors skillfully examine the development of strategy, organizational capabilities, and management challenges for operating in the global economy.

AIRC is an annual case law reporter that provides the full text of U.S. court opinions involving international law issues. The courts covered include all U.S. federal district courts, federal appellate courts, and the U.S. Supreme Court, as well as some state courts, the U.S. Court of Claims, the U.S. Court of International

Trade, and the U.S. Tax Court. The series seeks to provide not every single case in which a court refers to international law but rather all cases that analyze at least one international law issue in depth. The list of subjects addressed by these volumes is vast and changes from year to year, with the inclusion and prominence of most topics turning on their prevalence in a given year's jurisprudence. Some consistently prominent topics are personal jurisdiction over foreign defendants, deportation procedure, and double taxation. Over the last three editions (2006, 2007, and 2008), many topics have developed rapidly and constitute a correspondingly larger portion of the volumes, particularly Terrorism, the Foreign Sovereign Immunities Act, Forum Non Conveniens, and an entirely new, added topic: the National Security Exception (to deportation eligibility). The 2008 edition of AILC also features expanded sections on family law and on the detention of terrorist suspects. The U.S. war on terror and the crisis at Guantanamo have made that last topic a significant and dynamic component of AILC. Each edition of AILC also comes

framed with two practical resources for students and scholars. The first is an introductory editor's note that both reviews international law's major developments for the given year and explains to readers how to use the volumes. The second is a subject index to allow for targeted research. Volume Nine of AILC concerns topics in international trade, such as agency, employment, and labor, and transportation carriers. The volume also includes issues in customs law, environmental law, human rights, and criminal law. In *World Fuel Corporation v. Geithner*, the issue was whether the Office of Foreign Assets Control, United States Department of the Treasury properly denied World Fuel Corporation a license to access the blocked assets of one of WFC's debtors. The district court remanded the matter to the OFAC for de novo consideration. The circuit court dismissed for lack of jurisdiction. In *United States v. Rodriguez*, the principal issue was whether the Hostage Act has been validly applied to defendants who perpetrated an extortion scheme that used brief confinement of a taxi passenger to obtain a somewhat above average taxi

fare. The court concluded that the Hostage Act does not apply to the facts of the case.

The pulling out of the Trans-Pacific Partnership (TPP) by the US marks a new era for trade deals and potentially for intellectual property (IP). The TPP has evolved to become the Comprehensive and Progressive Agreement for TPP (CPTPP) with the remaining 11 members suspending some of its provisions, over half of which are IP-related. While the TPP excludes the two Asian giants – India and the People's Republic of China (PRC) – the ongoing Regional Comprehensive Economic Partnership (RCEP) negotiations include both of them. The first part of this edited collection sets out to re-examine some basic principles of trade negotiation, such as choosing the right representatives to negotiate and enhancing transparency as a cure to the public's distrust against trade talks; moreover, it analyses how

CPTPP might impact on RCEP's IP chapter and examines the possible norm setters of Asian IP. It then focuses on the PRC's trade and IP strategy against the backdrop of the power games between the PRC, India and the US. The second part of the book reflects on issues related to investor-state dispute settlement and its relationship with IP, such as how to re-calibrate the balance in international investment arbitration, and whether compulsory license of IP constitutes expropriation in India, the PRC and select ASEAN countries. The third part of the book questions and strives to improve some of the proposed IP provisions of CPTPP and RCEP and to redefine some aspects of international IP norms, such as: pre-grant patent opposition and experimental use exception; patent term extension; patent linkage and data exclusivity for the pharmaceutical sector; plant variety protection; pre-established damages for copyright infringement; and the

restructuring of copyright limitations in the public interest.

Although many firms label themselves

'global', very few can back this up with truly global sales and operations. In *The Regional Multinationals* Alan Rugman examines first-hand data from multinationals and finds that most multinationals are strongly regional, with international operations in their home regions of North America, the US or Asia. Only a tiny proportion of the world's top 500 companies actually sell the same product and deliver the same services around the world. Rugman exposes the facts behind the popular myths of doing business globally, explores a variety of regional models and offers an authoritative agenda for future business strategy. *The Regional Multinationals* is the essential resource for all academics and students in International Business, Organization and Strategic Management, as well as those with an interest in finding out how multinationals really work in practice and how future strategy must respond.
