The Sixties is a stimulating account of a turbulent age in America. Terry Anderson examines why the nation experienced a full decade of tumult and change, and he explores why most Americans felt social, political and cultural changes were not only necessary but mandatory in the 1960s. The book examines the dramatic era chronologically and thematically and demonstrates that what made the era so unique were the various social "movements" that eventually merged with the counterculture to form a "sixties culture," the legacies of which are still felt today. The new edition has added more material on women and the GLBTQ community, as well as on Hispanic or Latino/a community, the fastest-growing minority in the United States.

There is currently great interest in the process of diffusion bonding. The main thrust has been in the joining of advanced materials such as superplastic alloys, metal matrix composites and ceramics and, most importantly, to introduce the process into mass-production operations. Diffusion bonding has also led to reduced manufacturing costs and weight savings in conventional materials and developments in hot isostatic pressing have allowed greater design flexibility. Since the first conference on Diffusion Bonding, held at Cranfield in 1987, considerable advances have been made and it was therefore considered appropriate to organise the Second International Conference on Diffusion Bonding which was held at Cranfield Institute of Technology on 28 and 29 March 1990. The meeting provided a forum for the presentation and discussion of recent developments in Diffusion Bonding and was divided into four main subject areas: steel bonding and quality control, diffusion bonding of aluminium alloys, bonding of high temperature materials and general applications. This structure is retained in the proceedings. DAVID STEPHENSON vii CONTENTS v Preface

Critics often charge that the major revision of U.S. military strategy which took place after the collapse of the Soviet Union was budget-driven rather than strategydriven. Partially in response to this, the current strategic review, led by Secretary of Defense Rumsfeld, is intended to be "strategy-driven." Even so, the defense budget remains one of the central shaping features of U.S. national security and national military strategy. To understand what is possible in terms of defense transformation, one must first have a firm grasp of the budgetary context of strategic decisions. In the monograph that follows, Dr. Dennis Ippolito, one of the leading experts on the American defense budget, assesses this context. He shows that defense will continue to compete with domestic programs for that portion of the budget allocated to discretionary spending, and argues that this is a competition in which defense needs have not fared especially well in the past and may not in the future.

This book is open access under a CC BY 4.0 license. Rethinking the ways global history is envisioned and conceptualized in diverse countries such as China, Japan, Mexico or Spain, this collections considers how global issues are connected with our local and national communities. It examines how the discipline had evolved in various historiographies, from Anglo Saxon to southern European, and its emergence in Asia with the rapid development of the Chinese economy motivation to legitimate the current uniqueness of the history and economy of the nation. It contributes to the revitalization of the field of global history in Chinese historiography, which have been dominated by national narratives and promotes a debate to open new venues in which important features such as scholarly mobility, diversity and internationalization are firmly rooted, putting aside national specificities. Dealing with new approaches on the use of empirical data by framing the proper questions and hypotheses and connecting western and eastern sources, this text opens a new forum of discussion on how global history has penetrated in western and eastern historiographies, moving the pivotal axis of analysis from national perspectives to open new venues of global history.

"I found solace in nothing. Because everything was temporary. And days flew by like heavy cigarette smoke floating above the dancing heads in the city's most notorious club, like speech bubbles written in a language you cannot understand, like a dragon's breath you keep chasing, like pills that move from your hand to your red lips." Gratiagusti Chananya Rompas' personal essays are troves of memories she can always turn back to. They started off as day-to-day accounts of events from her younger years and the now. But Anya, as she is often called, is obsessed with how things people do — often in haste — quickly fossilize into memories, and how these memories, in turn, shape their lives.

How difficult it can be to forgive others or to accept forgiveness or to accept that someone who had offended the community has been reconciled and accepted back into it. For two millennia Christians have pondered the scope of the forgiveness Jesus taught and lived. They have celebrated practices and rites that have enabled the faithful to forgive, to be forgiven, and to accept that God brings reconciliation even when we find it almost impossible to forgive. This book traces that history to the present, offering a sense not only of how the rites of reconciliation matter to Catholics but how our struggles with forgiveness are a real contribution to reconciliation in our world.

Diffusion Beading of Materials is an attempt to pool the experience in vacuum diffusion bonding accumulated by a number of mechanical engineering works, research establishments, and colleges. The book discusses the principal bonding variables and recommended procedures for diffusion bonding in vacuum; the equipment for diffusion bonding and production rate; and the mechanization and automation of equipment. The text also describes the diffusion bonding of steels; the bonding of cast iron and cast iron to steel; and the bonding of dissimilar metals and alloys. The bonding of refractory and active metals and their alloys; the bonding of high-temperature alloys, nickel and nickel alloys; and the bonding of cemented carbides and of a cemented carbide to steel are also considered. The book further tackles the repair and reconditioning by diffusion bonding; the bonding of porous materials; and diffusion metallurgy. The text also encompasses nonmetals and their joining to metals; quality control of diffusion-bonded joints; accident prevention; and cleanliness in vacuum diffusion bonding.

Book Excerpt: ... But she said nothing of the sort of mystery connected with the powder; some instinct prevented her doing so. Nor did she tell that but a little of it remained, or that their stock of rose-leaves would soon be exhausted."Who knows what may happen before that?" she reflected, and the words of Linde's dream-visitor recurred to her, "Three times, and then ask the robin." Dame Barbara was quite satisfied and greatly delighted."Here," she said, fumbling for her substantial purse, "a groat for two ounces of it, did you say? No, a half-groat only? My dear, you'll have to raise your prices if the perfume is so excellent! Well to begin with, give me the four ounces straight away, and here's a half-groat over and above what it all comes to--dried leaves and fresh ones and flowers, all together--just the tiny silver piece for luck, you know."...
