This book reviews current immunotherapeutic strategies for gastrointestinal (GI) malignancies, including immune composition, immune checkpoint inhibitors, cell therapy, and peptide vaccines used to protect against esophageal, gastric, hepato-biliary, pancreatic and colorectal cancers. It also discusses the current challenges of using immunotherapy for the treatment of gastrointestinal malignancies. The book reviews highly sensitive and specific immunomarkers for the detection of GI malignancies, and examines therapeutic vaccines and the major cytokines involved in GI immunotherapy, as well as their basic biology and clinical applications. In closing, the book explores various aspects of computational biology for the detection and treatment of GI malignancies.

International Manual of Oncology Practice Academic Press

The field of immuno-oncology continues to rapidly evolve as new insights to fight and treat cancer emerge. The fourth edition of Immunotherapy provides the most current overview of immuno-oncology in different cancer types and toxicities associated with immunotherapy. While immunotherapy has revolutionized the treatment landscape of several solid malignancies, several challenges still exist. Only a subset of patients derive clinical benefits; some do not respond at all,

and others respond initially, only for their disease to progress later. Because these drugs can activate a broad range of immune cells, patients suffer from a unique set of side effects known as immune-related adverse events. As more immunotherapeutic agents are used in the clinic, it is important to provide updates about current and ongoing developments in the field to further research efforts and inform treatment decisions. The fourth edition will have a new focus on strategies to overcome the challenges associated with immunotherapy. Chapters will discuss topics such as biomarkers of response, resistance mechanisms, role of imaging in predicting immune-related adverse events, and management of immune-related adverse events. Written by leading experts conducting cutting-edge research, readers will gain up-to-date knowledge on the current state and future of immunotherapy.

This book describes and illustrates the reconstructive surgical techniques appropriate in patients with skin cancer and melanoma, according to anatomic region, with a view to enabling readers to perform these techniques optimally. An extensive introductory section discusses skin cancer and melanoma from the points of view of dermatology, oncology, pathology, radiotherapy, nuclear

medicine, and plastic and reconstructive surgery. The surgical treatment and reconstruction of localized skin cancer and melanoma in each anatomic region are then explained step by step with the aid of a wealth of color photos. The final section similarly presents the techniques and procedures appropriate for the surgical treatment and reconstruction of lymph node metastases, covering the sentinel node, lymphadenectomy, and lymphedema. This book will be immensely valuable for plastic and general surgeons, and also of interest for dermatologists, pathologists, oncologists, and nuclear medicine physicians.
