In this updated edition of *Substance Abuse and the Family*, Michael D. Reiter examines addiction through a family systems lens which considers a range of interconnected contexts, such as biology and genetics, family relationships, and larger systems. Chapters are organized around two sections: Assessment and Treatment. Examining how the family system organizes around substance use and abuse, the first section includes contributions on the neurobiology and genetics of addiction, as well as chapters on family diversity, issues in substance-using families, and working in a culturally sensitive way. The second half of the book explores various treatment options for individuals and families presenting with substance abuse issues, providing an overview of the major family therapy theories, and chapters on self-help groups and the process of family recovery. The second edition has many useful additions including a revision of the family diversity chapter to consider sexual and gender minorities, brand new chapters on behavioral addictions such as sex and gambling, and a chapter on ethical implications in substance abuse work with families. Additional sections include information on Multisystemic Therapy, Behavioral Couples Therapy, Motivational Interviewing, and Twelve-Step Facilitation. Each chapter now contains a case application to help demonstrate treatment strategies in practice. Intended for undergraduate and graduate students, as well as beginning practitioners, *Substance Abuse and the Family*, 2nd Ed. remains one of the most penetrating and in-depth examinations on the topic available.

Using a multidisciplinary framework, authors Russil Durrant and Jo Thakker explore the cultural and historical variables that contribute to drug use. Substance Abuse and the Family demonstrates what it means to view addiction through a systems lens by considering biology and genetics, family relationships, and larger systems. Throughout the text, Michael D. Reiter shows how to examine a person's predilection to become addicted, his or her social environment around substance use, the functionality of his or her family, and various treatment options. Chapters are organized around two sections: Assessment and Treatment. The first section pays attention to how the family system organizes around substance use and abuse. Here family roles, culture, and other issues such as family violence and resilience are covered. Two chapters are also included on the neuroscience and genetics of addiction, with contributions from Jaime L. Tartar and Christina Gobin. There are also chapters on working with partial systems, using genograms, and working in a culturally-sensitive way (with contributions from Dalis Arismendi), with culture-specific consideration paid to African American, Hispanic and Latin American, Asian American, and Native American families. The second half of the book explores what a systems orientation means in practice and goes over self-help groups for individuals and families. An overview of the major family therapy theories is included, which examines intergenerational, experiential, communication approaches, strategic, systemic, and post-modern models. A separate chapter examines issues faced by both youth and adult children of

alcoholics. Intended for undergraduate and graduate students, as well as beginning practitioners, this text is one of the most penetrating and in-depth examinations on the topic available. .

Alcohol and nicotine addiction mostly occur together. Over the last ten years therapeutic aspects and motivational strategies have been considerably improved. Hence, groups and subgroups have been defined and can be treated with specific medication and tailor-made psychotherapies, leading in the long term to considerably better and more effective results than the once broadly applied, rigorous abstinence-based therapies. However,

alcohol and nicotine addiction still represent major medical and social problems. In this book, new therapeutic approaches are comprehensively described, outlining the different interactions between personality, environment and the effects of the substance. In addition to prevention-based therapies and diagnosis, essential psychological and sociological strategies, as well as medication-based therapies, are also presented in detail. All of these therapies have realistic aims and are of global validity. In addition, the book provides a broad overview of the American and European epidemiology of alcohol and nicotine addictions. The book is written for all those who care for and offer professional therapy for alcohol and nicotine-addicted patients.

Problems stemming from the misuse and abuse of alcohol and other drugs are by no means a new phenomenon, although the face of the issues has changed in recent years. National trends indicate substantial increases in the abuse of prescription medications. These increases are particularly prominent within the military, a population that also continues to experience long-

standing issues with alcohol abuse. The problem of substance abuse within the military has come under new scrutiny in the context of the two concurrent wars in which the United States has been engaged during the past decade--in Afghanistan (Operation Enduring Freedom) and Iraq (Operation Iraqi Freedom and Operation New Dawn). Increasing rates of alcohol and other drug misuse adversely affect military readiness, family readiness, and safety, thereby posing a significant public health problem for the Department of Defense (DoD). To better understand this problem, DoD requested that the Institute of Medicine (IOM) assess the adequacy of current protocols in place across DoD and the different branches of the military pertaining to the prevention, screening, diagnosis, and treatment of substance use disorders (SUDs). Substance Use Disorders in the U.S. Armed Forces reviews the IOM's task of assessing access to SUD care for service members, members of the National Guard and Reserves, and military dependents, as well as the education and credentialing of SUD care providers, and offers specific recommendations to DoD on where and how improvements in these areas could be made.
