Draw Fifty Cars, Trucks, and Motorcycles Broadway

Draw In Order to See is the first book to survey the history of architectural design using the latest research in cognitive science and embodied cognition. Beginning with a primer on visual perception, cognitive science, design thinking, and modes of conception used by groups of architects in their practices, Mark Alan Hewitt surveys a 12,000-year

period for specific information about the cognitive schemata used by Homo sapiens to make their buildings and habitats. The resulting history divides these modes of thinking into three large cognitive arcs: crafting, depicting, and assembling, within specific temporal frames. His analysis borrows from Merlin Donald's thesis about mimetic and symbolic cognition as critical to the emergence of the modern mind, and further employs theories of enactment and embodiment to clarify their relationship to architecture. Individual chapters treat the emergence of depiction during the Renaissance, the education of architects in the modern era, Baroque illusionism and scenography, the breakdown of artisanal literacy during the Enlightenment, and modern experiments with models, montage, and illusions of movement. The author concludes with a critique of contemporary design and education, and promotes design with embodiment as a tonic for a profession in crisis, facing the challenges of climate change, energy shortages, inequality, and housing a population of over seven billion in the coming decades. This groundbreaking and valuable study presents a clear view of current research in two related fields that have not heretofore been compared, and outlines a strategy for future research. An extensive bibliography offers readers an up-to-date reference to both the science and the architectural history behind the text.

The Step-by-Step Way to Draw Cavemen, Queens, Aztecs, Vikings, Clowns, Minutemen, and Many More Watson-Guption

Alien fever is running high: the Alien movies and reissue of the Star Wars trilogy have made outer space fascinating to a whole new generation of children. And who better to help budding artists master their drawings of the friendly folk from the final frontier than Lee Ames--creator of the phenomenally successful Draw 50 series? An ideal tool for young artists or the parent or teacher seeking to help a child master their artistic skills, Draw 50 Aliens includes creatures from every walk of the galaxy: Ames gives instructions for drawing UFOs, Nebula Nomads, Milky Way Marauders, and every other type of extraterrestrial. And, in the tradition of the Draw 50 series, all of these characters are humorous, lovable, and very accessible for children. With over two million copies in print, the Draw 50 series has successfully shown children how to create everything from a robin to a spaceship, Tyrannosaurus rex to John the Baptist. But with Draw 50 Aliens, Ames has--perhaps as never before--hit upon a deeply appealing subject, one that taps into children's sense of wonder and will keep them endlessly entertained and forever sketching away.

Even the youngest artists can make these mythical beasts look great. It's easy when you do it the Draw 50 way. www.draw50.com

Draw 50 Endangered Animals Watson-Guption Publications

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, *What We Think About When We Try Not To Think About Global Warming* "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, *Vox* "This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook." —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable,

and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.
