With this fourth edition, accountants will acquire a practical set of tools and the confidence they need to use them effectively in making business decisions. It better reflects a more conceptual and decision-making approach to the material. The authors follow a "macro- to micro-" strategy by starting with a discussion of real financial statements first, rather than starting with the Accounting Cycle. The objective is to establish how a financial statement communicates the financing, investing, and operating activities of a business to users of accounting information. This motivates accountants by grounding the discussion in the real world, showing them the relevance of the topics covered to their careers.

It further highlights the benefits of forensic accounting audits for corporate benefits and evidence acceptability. Covering topics such as credit card fraud, blockchain technology, and developing countries, this book is an excellent resource for accounting professionals, external auditors, students and faculty of higher education, auditors, researchers, and academicians.

Without succumbing to utopian fantasies or realistic pessimism, Riemer and his contributors call for strengthening the key institutions of a global human rights regime, developing an effective policy of prudent prevention of genocide, working out a sagacious strategy of keenly targeted sanctions—political, economic, military, judicial—and adopting a guiding philosophy of just humanitarian intervention. They underscore significant changes in the international system—the end of the Cold War, economic globalization, the communications revolution— that hold open the opportunity for significant, if modest, movement toward strengthening key institutions. The essays explore key

problems in working toward prevention of genocide. They highlight the existence of considerable early warning of genocide and emphasize that the real problem is a lack of political will in key global institutions. Sanctions, especially economic sanctions may punish a genocidal regime, but at the expense of innocent civilians. Thus, more clearly targeted sanctions are seen as essential. The argument on behalf of a standing police force to deal with the crime of genocide, as they show, is powerful and controversial: powerful because the need is persuasive, controversial because political realists question its cost and political feasibility. Implementing a philosophy of just humanitarian intervention requires an appreciation of the difficulties of interpreting those principles in difficult concrete situations. A permanent international criminal tribunal to deter and punish genocide, they argue, will put into place a much needed component of a global human rights regime. A thoughtful analysis for scholars and students of international politics and law, and human rights in general.
