SAP is a powerful software that meets the requirement of business all over the world. This well-organised book comprising 34 chapters is useful for both beginners and professionals. Being a learning guide and a user manual, the book will be immensely valuable for all those who are training to be SAP consultant. If you are a material/production manager, a QM professional or a business executive, you will find that the book brings a lot of convenience in your work and minimises inventory losses. A New Approach to SAP Implementation Structured dialog :The dialog between the consultant and the users should be based on the structure of this book. The consultant would demonstrate a business transaction, e.g. goods receipt, in its simplest form. He would then explain the data items on the screens, their meaning and significance. He would enquire whether the data item is

relevant for the client company. The data items that are not relevant can be hidden in the implementation, and related configuration marked as not required. When the consultant would come to a section explaining IMG node, his questions to the user would be designed to collect the information required to configure that node. Prototyping :As the structured dialog continues, the consultant would go on doing the configuration. By the end of the dialog, the consultant would have built a company-specific prototype. Training and trials :The prototype would be a rough-cut implementation of SAP for the company. It would be used for training the users. After training, the users would try out the system. They would perform routine transactions several times using real-life data of their company. They would try different scenarios and record their observations. Refinement :After prototype trials, the consultant and the users would sit together to discuss what the users required to do, but could not do with the prototype. The consultant would use this input to refine the prototype and to build new functionality, if needed.

Configuration manual :The documentation of SAP implementation includes a configuration manual. This configuration manual should be structured on the lines of this book as explained in Chapter 34. Such a configuration manual will be easy to understand as it groups logically related elements together. User manual :This book will serve as a generic user manual. Company-specific user manual can also be structured on the lines of this book including only company-specific guidelines for the users.

This manual, written with the objective of providing detailed training to both, consultants and users goes deep into the subject from initial configurations to setting up the Income Statement and Balance Sheet of the company. The integration points of Finance with Purchasing/Inventory and Shipping/Billing are explained in detail and the chapters marked clearly if it is a Configuration (C) or Transaction (U) or both. Since most of the book has been written in standard SAP, once a company code is set up along with some basic configurations defined in the first few pages, a SAP user, if so desires, can stay only with the areas marked 'U' by passing the 'C' since not everything in standard SAP depends on configurations. Consultants or to-be consultants, of course, need to understand both sides of SAP. The effects of changes done in configuration are immediately followed by their effect on the transactions, thereby making the learning relational in real time for better understanding. From the user's perspective, not much from the subject has been left out in writing this manual and every effort has been taken to keep it relevant to the Corporate Finance functions of day to day working on SAP in an orderly flow. This manual is really a result of many years of training both consultants, and business users. The author appreciates your comments and suggestions on improving this book. If I can be of any assistance in helping you understand the subject better or any other way, please feel free to drop in a mail to ykalra@shefaria.com captioning the email with the Book Title.
