"Frightening and fun!"
-Neil Patrick Harris, New
York Times bestselling
author of The Magic
Misfits Readers will be
scared silly in this spooky
and hilarious middle*

grade series starter about a town chock-full of monsters and the kids who must unravel centuries of secrets to save it. Will Hunter thought his life couldn't get any worse: His parents just got divorced, His best (and only) friend now is his dog, Fitz, And his mom moved them from New York City to the middle-of-nowhere town called East Emerson. But Will was wrong—things

are about to get way worse. Because East Emerson is filled with a whole lot of monsters, and he's the only person who can see them. When all the town pets (including Fitz) go missing, Will suspects there's something sinister going on. So he joins forces with outcast Ivy and super-smart Linus to uncover the ancient secrets of East Emerson. Besides, nothing bad could happen

when three sixth graders team up against monsters, magic, myths, and mad science . . . right?

Essentials of Financial Management is a paperback edition of an Open Access e-textbook suitable for students with limited knowledge of finance and financial markets. It answers the main questions of a corporate entity, such as how businesses finance their activities, how they

select projects to invest in, the distribution of net cash flow and, of increasing importance, how businesses manage price risk relating to cost of goods sold or a decline in revenue. In providing invaluable guidance to finance, management and business students, Essentials of Financial Management employs two main philosophies: that finance is a real-life subject and that finance is a numerical subject, which is why this brilliant e-textbook contains real world examples as well as

numerous Excel spreadsheet solutions for students to download and use.

Taking Refuge: the Art of Staying Young Forever American Psychological Association (APA) Illustrating the scope of this fascinating and wide-reaching subject to the student, this clear and concise text gives a broad introduction to international human rights law. Coverage includes regional systems of protection, the role of the UN, and a variety of substantive rights. The

author skilfully guides students through the complexities of the subject, and then prepares them for further study and research. Key cases and areas of debate are highlighted throughout, and a wealth of references to cases and further readings are provided at the end of each chapter.

Independently Published Flourishing in Emerging Adulthood highlights the third decade of life as a time in which individuals

have diverse opportunities for positive development. There is mounting evidence that this time period, at least for a significant majority, is a unique developmental period in which positive development is fostered. Dr. Lene Arnett Jensen highlights the importance of this work in an engaging foreword, and chapters are written by leading scholars in diverse disciplines who address various aspects of flourishing. They discuss multiple aspects of positive development

including how young people flourish in key areas of emerging adulthood (e.g., identity, love, work, worldviews), the various unique opportunities afforded to young people to flourish, how flourishing might look different around the world, and how flourishing can occur in the face of challenge. Most chapters are accompanied by first-person essays written by a range of emerging adults who exemplify the aspect of flourishing denoted in that chapter and make note of how

choices and experiences have helped them transition to adulthood. Taken together, this innovative collection provides rich evidence and examples of how young people are flourishing as a group and as individuals in a variety of settings and circumstances. This unique resource will be useful to students, faculty, professionals, clinicians, and university personnel who work with young adults or who study development during emerging adulthood.

In this book Grundmann argues that Marx's theory of human nature and his evolutionary thinking are cogent tools for understanding basic traits of industrial countries and the ecological problems they produce. He challenges the widespread belief that the development of productive forces is by itself a threat to the environment, arguing that only specific technologies, not technology as such, lead to environmental

degradation. He concludes that the pursuit of productivity and the development of a healthy environment need not be mutually exclusive.

This book is an indispensable guide to how to write articles, choose journals, and deal with revisions or rejection. Each chapter is written by a highly experienced journal editor - people who have actually made decisions on manuscripts and publication, as well as being eminent in their

respective scientific field and written many articles themselves. It showcases parts of articles, discusses journal submission, outlines the resubmission process, and highlights systemic issues. Clear instructions are given on writing an empirical article, literature reviews, titles and abstracts, introductions, theories, hypotheses, methods and data analysis. Each part of the process is laid out from presenting results, to mapping-out a discussion and writing for referees. The integral

skills of revising papers and ensuring a high impact are taught in 'article writing 101'. Whilst less intuitive knowledge is provided concerning publishing strategies, references, online submission, review systems, open access and ethical considerations. *12 Rules for Life* AMACOM/American Management Association "The most shocking fiction I have read in years. book, which has been

called "one of the

outstanding contributions to psychological thought"

by Carl Rogers and “one of the great books of our time” by Harold Kushner, has been translated into more than fifty languages and sold over sixteen million copies. “An enduring work of survival literature,” according to the New York Times, Viktor Frankl’s riveting account of his time in the Nazi concentration camps, and his insightful exploration of the human will to find meaning in spite of the worst adversity, has offered solace and guidance to generations of readers

since it was first published in 1946. At the heart of Frankl’s theory of logotherapy (from the Greek word for “meaning”) is a conviction that the primary human drive is not pleasure, as Freud maintained, but rather the discovery and pursuit of what the individual finds meaningful. Today, as new generations face new challenges and an ever more complex and uncertain world, Frankl’s classic work continues to inspire us all to find significance in the very

act of living, in spite of all obstacles. This gift edition come with endpapers, supplementary photographs, and several of Frankl’s previously unpublished letters, speeches, and essays. This book was published with two different covers. Customers will be shipped one of the two at random. Article Reporting Standards for Quantitative Research (JARS-Quant) and Meta-Analysis Reporting Standards (MARS). These standards lay out the essential pieces information researchers need to report, including detailed accounts of the methods they followed, data results and analysis, interpretations of their findings, and implications for future research. The book reflects updates to the original JARS and the MARS that meet researchers' developing

needs in the behavioral, social, educational, and medical sciences. It analyzes examples from APA journals, offering readers easy-to-read advice for implementing these revised standards in their own writing while also conforming with the APA Style guidelines laid out in the sixth edition of the Publication Manual. New and expanded chapters offer more detailed guidelines for reporting statistical analyses and unique elements of different types of research,

including replication studies, clinical trials, and observational studies. This book is essential reading for experienced and early career researchers alike, as well as undergraduate and graduate students in research methods classes. It presents what JARS recommends for information to include in all reports on new quantitative data collections, and addresses the material that appears first in a research manuscript. It also describes the Method

section, presents the JARS standards for reporting basic research designs and covers the general reporting requirements for the statistical results of studies with multiple participants in each condition."--Preface. Power, Politics, and the Planetary Costs of Artificial Intelligence Cosimo, Inc. The hidden costs of artificial intelligence, from natural resources and labor to privacy and freedom What happens when artificial intelligence

saturates political life and depletes the planet? How is AI shaping our understanding of ourselves and our societies? In this book Kate Crawford reveals how this planetary network is fueling a shift toward undemocratic governance and increased inequality. Drawing on more than a decade of research, award-winning science, and technology, Crawford reveals how AI is a technology of extraction: from the energy and minerals needed to build and

sustain its infrastructure, to the exploited workers behind "automated" services, to the data AI collects from us. Rather than taking a narrow focus on code and algorithms, Crawford offers us a political and a material perspective on what it takes to make artificial intelligence and where it goes wrong. While technical systems present a veneer of objectivity, they are always systems of power. This is an urgent account of what is at stake as technology companies

use artificial intelligence to reshape the world. *A Guide to Scientific Writing for Students and Researchers* American Psychological Association (APA) "Entertainers and trainers have a lot in common. Careers in astronomy for women (as in other sciences) were a rarity in Britain and Ireland until well into the twentieth century. The book investigates the place of women in astronomy before that era, recounted in the form of biographies of about 25 women born between 1650 and 1900 who in varying capacities contributed to its progress during the eighteenth, nineteenth and early twentieth centuries. There are some famous names among them whose

biographies have been written before now, there are others who have received less than their due recognition while many more occupied inconspicuous and sometimes thankless places as assistants to male family members. All deserve to be remembered as interesting individuals in an earlier opportunity-poor age. Placed in roughly chronological order, their lives constitute a sample thread in the story of female entry into the

male world of science.

The book is aimed at astronomers, amateur astronomers, historians of science, and promoters of women in science, but being written in non-technical language it is intended to be of interest also to educated readers generally.

This book is a guide to scientific communication for students and researchers in psychology and related subjects. It is unique in that it combines

under one cover practically everything the reader needs to know to communicate effectively in articles, books, grant proposals, prospectuses, talks, and lectures. The emphasis is on tips and practical advice that social scientists can actually use to improve communication. Robert Sternberg reviews rules for effective prose in a

variety of formats, debunks common misconceptions about writing, highlights commonly misused words and gives instruction on the preparation of tables, figures, and bibliographies. For the third edition, the author has added entirely new chapters on 'How to Win Acceptances from Psychology Journals:

Twenty-One Tips for Better Writing', 'Writing a Grant or Contract Proposal', 'Writing Book Proposals' and 'Writing a Lecture', and has expanded the chapter on 'References for the Psychology Paper'. He has also updated the volume's references. This book is an essential purchase for all psychologists and aspiring psychologists.
