In this new view of the Citroen story, automotive/aviation writer and design specialist Lance Cole investigates not just the details of the cars of Citroen, but the aeronautical and cultural origins that lay behind Citroen's form and function. The book digs deep into the ethos of Automobiles Citroen to create a narrative on one of the greatest car manufacturers in history. Using interviews, translations, archive documents and specially-commissioned photographs, the Citroen journey is cast in a fresh perspective. It explains in detail the influences upon Citroen design: Voisin, Lefebvre, Bertoni, Boulanger, Mages, Opron and recent Citroen designers such as Coco, Blakeslee and Soubirou. As well as all the men of the great period of 1920s-1970s expansion, it also cites less well-known names of Citroen's French engineering, design, and influence such as Cayla, Gerin, Giret, Harmand, Dargent and others, to give a full picture of Citroen heritage. The book provides in-depth analysis of all major Citroen models with an engineering and design focus and profiles key individuals and cars up to the present day and Citroen's 'DS'-branded resurgence. It features many newly commissioned photographs, rare archive drawings and interviews with Citroen owners. Researched amongst leading Citroen experts and restorers, Lance Cole provides a fresh perspective on the Citroen car manufacturer, its design language and the legacy of its extraordinary engineering which will be of great interest to all Citroen and motoring enthusiasts. Superbly illustrated with 329 colour photographs, many newly commissioned along with rare archive drawings.

This book is designed for those scholars, students, policy-makers – or just curious readers– who are looking for heterodox thinking on the issue of environmental economics and policy. Contributions to this book draw on multiple streams of institutional and evolutionary economics and help build an approach to environmental policy that radically diverges from mainstream prescriptions. No 'silver bullet' solutions emerge from the analyses. Even market-based tools – such as green taxes or tradable pollution permits – are bound to fail if they are not incorporated into an integrated, multi-dimensional and multi-actor policy for structural change.

What makes playing a golf course a great experience? Kevin Markham travelled 6,800 miles in a 20-year-old camper van, walked 2,100 miles, lost countless balls, and wore out three pairs of golf shoes to find out. He played and rated every 18-hole course - all 350 of them. The result is the most comprehensive, best-researched guide to Irish golfs, from expensive, well-known courses to affordable little gems. Kevin assesses each course in a detailed review and from a novel perspective, rating the golfing experience using the same criteria for all courses. Courses are ranked out of 100, across 8 criteria, such as design, appeal and value for money. This concise, detailed book is for golfing tourists looking for great value courses; for golfing societies that want to go beyond their local area; and for Irish golfers searching for excellent but unsung courses in Ireland. Written from an amateur's perspective, reviews focus on the energy and excitement of playing each course to give a true representation of the golf experience, and provides all the information necessary to book your round.

The automotive industry is still one of the world's largest manufacturing sectors, but it suffers from being very technology-focused as well as being relatively short-term focused. There is little emphasis within the industry and its consultancy and analyst supply network on the broader social and economic impacts of automobility and of the sector that provides it. The Global Automotive Industry addresses this need and is a first port of call for any academic, official or consultant wanting an overview of the state of the industry. An international team of specialist researchers, both from academia and business, review and analyse the key issues that make vehicle manufacturing still the world's premier manufacturing sector, closely tied in with the fortunes of both established and newly emerging economies. In doing so, it covers issues related to manufacturing, both established practices as well as new developments; issues relating to distribution, marketing and retail, vehicle technologies and regulatory trends; and, crucially, labour practices and the people who build cars. In all this it explains both how the current situation arose and also likely future trajectories both in terms of social and regulatory trends, as the technological, marketing and labour practice responses to those, leading in many cases to the development of new business models. Key features Provides a global overview of the automotive industry, covering its current state and considering future challenges Contains contributions from international specialists in the automotive sector Presents current research and sets this in an historical and broader industry context Covers threats to the industry, including globalization, economic and environmental sustainability The Global Automotive Industry is a must-have reference for researchers and practitioners in the automotive industry and is an excellent source of information for business schools, governments, and graduate and undergraduate students in automotive engineering.

While war historians may disagree over whether Japan had plans to invade Australia in WW2, all will agree three Japanese midget submarines came into Sydney Harbour with serious intent in 1942. But little has surfaced [until now] of a fourth midget submarine and the story of survival of one of the Japanese crew. Alone and adrift, the youthful survivor was hauled aboard a coastal steamer only to be dumped on remote Lord Howe Island with another unwelcome passenger. The two survived in the wild for a while before an island woman came on the scene. Denied the pleasures of the island paradise, the Japanese submariner was inhumanely interned until an amorous liaison secured his passage to freedom. In 2006, 64 years later, bestselling Japanese novelist Hiraku Makimura lands in Sydney to speak at a writers' seminar. From the moment a young woman steps into his hotel room he is on an emotional rollercoaster, while driving a Subaru around Sydney turns into a fatal nightmare. The hotel receptionist is an added distraction, until a woman with her own agenda takes Makimura in hand, leading him surreally to an improbable rendezvous with the submerged past\_\_an encounter that rocks him to the core of his being.

Environmental sustainability creates both tremendous business opportunities and formidable threats to established companies across virtually all industry sectors. Yet many companies tackle the issue in a superficial or passive way, rather than considering fundamental changes to their existing business models. By ignoring the opportunities of Green Business Model Transformations, companies exclude themselves from a large variety of potential means to create economic value. In addition to ordinary product and process innovations, they can change "the rules of the game" within an industry towards environmental sustainability. Green Business Model Transformations, however, are challenging ventures: New, green business models with all their uncertainties and inherent complex systemic characteristics are difficult to design, assess, and implement successfully, particularly in the context of established companies that often entail complex structures and considerable inertia. As a result, there is a great need for guidance in management practice. This publication addresses this need with a general approach to Managing Green Business Model Transformations that is based on a broad theoretical foundation, illustrated by many real-world examples from various industry sectors.
