 Which are the world's best streets, and what are the physical, designable characteristics that make them great? To answer these questions, Allan Jacobs has surveyed street users and design professionals and has studied a wide array of street types and urban spaces around the world. With more than 200 illustrations, all prepared

by the author, along with analysis and statistics, Great Streets offers a wealth of information on street dimensions, plans, sections, and patterns of use, all systematically compared. It also reveals Jacobs's eye for the telling human and social details that bring streets and communities to life. An extensive introduction discusses the importance of streets in creating communities and criteria for identifying the best streets. The essays that follow examine 15 particularly fine streets, ranging from medieval streets in Rome and Copenhagen to Venice's Grand Canal, from Parisian boulevards to tree-lined residential streets in American cities. Jacobs also looks at several streets that were once very fine but are less successful today, such as Market Street in San Francisco, identifying the factors that figure in their decline. To broaden his coverage, Jacobs adds briefer treatments of more than 30 other streets arranged by street type, including streets from Australia, Japan, and classical antiquity in addition to European and North American examples. For each of these streets he has prepared plans,

sections, and maps, all drawn at the same scales to facilitate comparisons, along with perspective views and drawings of significant design details. Another remarkable feature of this book is a set of 50 one square-mile maps, each reproduced at the same scale, of the street plans of representative cities around the world. These reveal much about the texture of the cities' street patterns and hence of their urban life. Jacobs's analysis of the maps adds much original data derived from them, including changes of street patterns over time. Jacobs concludes by summarizing the practical design qualities and strategies that have contributed most to the making of great streets. This volume presents chapters by researchers, practitioners, and policymakers who study the impact of classroom portfolios in the assessment of writing achievement by elementary and middle grade students. The focus throughout the volume is on the tension between classroom assessment and externally mandated testing. It presents the efforts of researchers, practitioners, and policymakers to understand the impact of classroom portfolios for the assessment of writing achievement by elementary and middle grade students. Under the auspices of the Center for the Study of Writing, the editors conducted a national survey of exemplary portfolio projects, arranged for a series of "video visits," and held several working conferences. The result of this work is a broad-ranging tale: the aspirations of teachers

and administrators to move the machinery of schooling in the direction of more authentic and engaging tasks, the puzzlement of students when they realize that the assignments are real and that the teacher may not have a "right answer" in mind, and the tensions between ivory-tower ideas and everyday classroom practice. Divided into four sections, this research volume: * provides a historical perspective, develops the conceptual framework that serves as a background for many activities described throughout, and discusses numerous practical issues that confront today's researchers and practitioners; * views the phenomenon of writing portfolios through a variety of broadview lenses such as teacher enthusiasm, student reflection, assessment tension, the portfolio as metaphor, and the locus of control; * conveys important conceptual issues with a balance toward pragmatics; and * offers unique insights from the perspective of one individual who serves as scholar, researcher, and teacher.

This classic sociological examination of art as

collective action explores the cooperative network of suppliers, performers, dealers, critics, and consumers who—along with the artist—"produce" a work of art. Howard S. Becker looks at the conventions essential to this operation and, prospectively, at the extent to which art is shaped by this collective activity. The book is thoroughly illustrated and updated with a new dialogue between Becker and eminent French sociologist Alain Pessin about the extended social system in which art is created, and with a new preface in which the author talks about his own process in creating this influential work.
