Provides international perspectives on how problem-based learning (PBL) practices can enhance thinking. Captures the art and science of PBL from the perspectives of pedagogy, psychology and technology. Electronic Commerce ASCD

This book examines the challenges faced by seven multinational companies - Intel, Lenovo, Samsung Electronics, ZTE, BMW Hyundai Motor Company, Mahindra and Mahindra - in their endeavour to contribute to the economic, environmental and social development of Asia. The lessons learned from the examination of these business practices may directly contribute to an increase in the practice of sustainable management and may as such contribute to positive economic, environmental and social impact of companies in this region. The cases are highly relevant for management theoreticians seeking to deepen our understanding of corporate sustainability in an area where scholars, practitioners and policy-makers can expect new questions, problems and challenges in the years ahead. The book is also of high interest to policy review agencies, policy makers and welfare economists seeking to support the development of a comprehensive sustainability framework for managing social and environmental issues in the context of Asia.

**Absolute Fear** McGraw-Hill Incorporated This important and original book places the case study in international business research in its historical context, critically evaluates current case study practices in the field and proposes a more pluralistic future for case research within international business and international management research. While the case study is the most popular qualitative research strategy in the field, only a narrow selection of possible approaches is

currently used. IB and IM researchers typically rely on a case study approach that could be characterized as 'qualitative positivism'. The editors and contributors look beyond this disciplinary convention and encourage greater pluralism in IB and IM case research. Their key argument is that increased awareness of prevailing disciplinary conventions - and their limitations - increases the potential for methodological innovation and versatility in case research. The contributions provide critical, novel and innovative perspectives on the case study in IB and IM research. The book offers inspiration to case authors and an authoritative methodological reference for those publishing and reviewing case research. It will also be highly regarded by postgraduate and doctoral students in IB and IM as well as both qualitative and quantitative researchers in the field.

Valuation, Risk Assessment, and EVA Strategies John Wiley & Sons Incorporated Western perceptions of Islam in Indonesia are often dominated by images of radical minorities seeking a shari'ah state. In reality, however, mainstream Islamic institutions have played an important part in the post-Soeharto process of democratization and institutional reform.

Among them are Indonesia's Islamic courts, the Pengadilan Agama or Religious Courts. In a ground-breaking new Lowy Institute Paper Cate Sumner and Tim Lindsey explore how the Islamic courts have embraced reform within a judicial system notorious for corruption and incompetence, taking the lead in efforts to deliver decisions that are more accessible, transparent and fair, especially for women and the poor.

In Epistemology, Laurence Bonjour introduces the serious philosophy student to the history and concepts of epistemology, while simultaneously challenging them to take an active part in its ongoing debates. The text reflects Bonjour's conviction that the place to start any discussion of the theories of knowledge is with the classical problems, beginning with and centered around Descartes. Only after the groundwork for understanding epistemology is laid does Bonjour move on to the more contemporary revolutions against the classical approach. A versatile text that can be used in introductory-level epistemology courses, it can also be used by an upper-level epistemology class when supplemented by appropriate readings. This book is not, however, a simple reader of the different theories of knowledge. Epistemology prods students to think independently about the various epistemological approaches presented in the text, and form their own conclusions, thus becoming active participants in the ongoing debate.

Counter This text focuses on the risks faced by managers of financial institutions

and the methods and markets through which these risks are managed. Pertinent information regarding non-bank financial institutions, such as insurance companies and credit unions, provides a more holistic view of the challenges raised by factors such as interest rates, market risk, credit risk, and liquidity risk, among others. The highly regarded text continues to take the same innovative approach as the first, and second editions, focusing on managing return and risk in modern financial institutions. The book's central theme is that the risks faced by financial institution managers, and the methods and markets, through which these risks are managed, are becoming increasingly similar. It has become less of an issue whether the institution is chartered as a commercial bank, a savings bank, investment bank, or an insurance company. This edition includes even more coverage of non-bank institutions by adding more examples relating to credit unions and insurance companies.

Since the early 1980s it has been recognized that a firm's resources, capabilities and competencies help it gain a competitive advantage, that in turn produces higher performance. This resource-based view of the firm has been an important development in the field of strategic management. It explains why some organizations perform better than others and shows that leveraging, both tangible and intangible, resources is necessary to gain a sustainable competitive advantage. Bringing together contributions from multiple perspectives this book examines the management of strategic resources. First, the book discusses resource strategy and firm performance - how resources lead to competitive advantage and how firm resources interplay with the firm strategy to produce specific outcomes. Second, it addresses the development, commitment and governance of firm resources - how

firms develop critical resources, including the especially difficult development of intangible resources such as tacit knowledge, internal networks and the creation of new intellectual capital. Finally, attention is focused on the problems involved in the transfer of resources and skills in cooperative strategies such as strategic alliances, and the allocation of resources to produce innovation. The resource-based view of the firm is a valuable way of analyzing and understanding firm strategies and performance. The contributions in this book provide an important in-depth view of how strategic resources can be developed and leveraged to create value in organizations.

*Essentials of Business Statistics* presents basic statistic concepts, including descriptive statistics, probability, and elementary inferential statistics in a student oriented style. All concepts are developed with support of unique three part examples: problem, solution, and interpretation, which give students the full picture. Applications are drawn from all areas of business and economics. This book is a refocused and shortened version of *APPLIED STATISTICS FOR BUSINESS AND ECONOMICS 2/e* by Webster. This briefer book concentrates on the core topics in business statistics. It is important to retain 2/e Webster users by presenting this 1/e as a "shortened" book. It is also very important to present it as a "new" alternative to the Mason level market, to replace any brief text, e.g. Mason, Levin/Rubin, Mann, Trioloa/Franklin and Anderson/Sweeney/Williams *Essentials*.

The complete guide for how to design and conduct theory-testing and other case studies... *Case Study Methodology in Business Research* sets out structures and guidelines that assist students and researchers from a wide range of disciplines to develop their case study research in a consistent and rigorous manner. It clarifies the differences between practice-oriented and theory-oriented research and, within the latter category, between theory-testing and theory-building. It describes in detail how to design and conduct different types of case study research, providing students and researchers with everything they need for their project. The main aims are to: \* present a broad spectrum of types of case study research (including practice-oriented case studies, theory-building case studies and theory-testing case studies) in one consistent methodological framework. \* emphasize and clearly illustrate that the case study is the preferred research strategy for testing deterministic propositions such as those expressing a necessary condition case by case and that the survey is the preferred research strategy for testing probabilistic propositions. \* stress the role of replication in all theory-testing research, irrespective of which research strategy is chosen for a specific test. \* give more weight to the

importance of theory-testing relative to theory-building. *Case Study Methodology in Business Research* is a clear, concise and comprehensive text for case study methodology. Templates are supplied for case study protocol and how to report a case study.
