"The first edition of The Ultimate School Counselor's Guide to Assessment and Data Collection has come to fruition out of the professional observations and experiences of the authors and those that they have supervised and trained. What is highlighted in the field and supported by research is that school counselors-in-training are not getting adequate knowledge and training in assessment and data collection relevant to their specialty area. While counselor preparation programs frequently require a course in counseling assessment, school counselors-in-training often report dissatisfaction in the relevance of what is covered, as the content is not focused on what school counselors actually see and use in practice. Further, practicing school counselors often express confusion in not knowing what assessments may be best suited to the work, which could be related to lack of knowledge or lack of accessibility of such instruments. Prior to this book, no resource existed that focuses on the concept of assessment specifically for school counselors and provides them with formal and informal assessments that provide opportunities for data collection that, in turn, informs one's data-driven, CSCP. Whether it be individual student data, school level data, school counseling program level data, or about the school counselors' practices or beliefs, this professional resource offers a unique opportunity to meet the call from school counseling professionals to have guidance and access to instruments that focus on multiple levels of data"--

The primary purpose of this revision remains identical to that of the first edition--to show how key personality, cognitive/behavioral, and vocational tests/assessment procedures can be used by counselors in their work with clients. Too often, assessment books only provide the reader with information about tests and assessment procedures. They do not, however, take the next step--showing readers how these tests/assessment procedures can be used and integrated into the actual work of counseling. This revision is designed to fill that void. Chapter authors, all of whom are experts in their respective topic areas, share the theoretical and research backgrounds about a particular test/assessment procedure and then provide a case example or examples to show how assessment data can be meaningfully incorporated into the counseling process.
