Can innovations in business change society? Can innovations in society change business? These two questions have become critically urgent in recent years, but are rarely considered together.

'Business Models for Sustainability Transitions' therefore asks, can contemplating both concepts together result in a flourishing, sustainable future? Technology alone cannot save us. We cannot consciously consume our way out of trouble. This book represents a start at bridging the dynamic world of business model innovation with the constant and unprecedented transitions underway in the world around us. For researchers, practitioners, and policy makers, the coupling of the two questions has the potential to unlock answers to our grand global challenges with responses that are at the same time rapid and enduring. This work offers unique and considered glimpses into what it may take to harness wide-ranging innovations for the collective good.

One of the ways forward when working with those who have little or no speech, or limited comprehension of language, is to use music. In this book tried and tested approaches and activities devised to promote the development of communication and social interaction at a fundamental level are clearly set out. The ethos behind this manual is a person-centered approach, within a structured framework and allowing for differentiation and improvisation according to the learner's individual needs and developmental levels. This is a practical guide that contains lots of ideas and original activities for the specialist and non-specialist alike. It provides original songs and music scores, activities and games, and suggestions for group work for learners at a variety of levels. This book will be helpful to teachers, carers, therapists and parents who work or live with people with severe or profound and multiple learning difficulties. Music teachers and coordinators working in mainstream early years and primary education will also find the songs and activities useful.
