Increasingly, historians & museum curators are using technological artifacts as expressions of human culture. Reflecting the broad scope of interaction between science, technology & society, they can help us see not just machines, but also imaginative worlds of the past. Building on this growing interest, three of the world's greatest depositories of material heritage in the history of technology - the Deutsches Museum in Munich, the Science Museum in London & the Smithsonian Institution in Washington - are cooperating in the new series of publications which explores the use of objects as resources in the study of the history of science, technology & medicine. Each volume will examine a wide range of uses of objects but will focus on a particular area of study. With its focus on modern technology, Manifesting Medicine is a history of medicine with a difference. The authors have striven to show that those who today encounter the artifacts of this book, in its pages & even perhaps "in the flesh," will be confronting big subjects: blood, life, danger, & conception. All those interested in how medicine affects the culture of the healthy well as the fate of the sick will find this volume of interest.

The German Revolution of November 1918 is nowadays largely forgotten outside Germany. It is generally regarded as a failure even by those who have heard of it, a missed opportunity which paved the way for the rise of the Nazis and the catastrophe to come. Robert Gerwarth argues here that to view the German Revolution in this way is a serious misjudgement. Not only did it bring down the authoritarian monarchy of the Hohenzollern, it also brought into being the first ever German democracy in an amazingly bloodless way. Focusing on the dramatic events between the last months of the First World War in 1918 and Hitler's Munich Putsch of 1923, Robert Gerwarth illuminates the fundamental and deep-seated ways in which the November Revolution changed Germany. In doing so, he reminds us that, while it is easy with the benefit of hindsight to write off the 1918 Revolution as a 'failure', this failure was not somehow pre-ordained. In 1918, the fate of the German Revolution remained very much an open book.

This collection explores different approaches to contextualizing and conceptualizing the history of Pietism, particularly Pietistic groups who migrated from central Europe to the British colonies in North America during the long eighteenth century. Emerging in German speaking lands during the seventeenth century, Pietism was closely related to Puritanism, sharing similar evangelical and heterogeneous characteristics. Dissatisfied with the established Lutheran and Reformed Churches, Pietists sought to revivify Christianity through godly living, biblical devotion, millennialism and the establishment of new forms of religious association. As Pietism represents a diverse set of impulses rather than a centrally organized movement, there were inevitably fundamental differences amongst Pietist groups, and these differences - and conflicts - were carried with those that emigrated to the New World. The importance of Pietism in shaping Protestant society and culture in Europe and North America has long been recognized, but as a topic of scholarly inquiry, it has until now received little interdisciplinary attention. Offering essays by leading scholars from a range of fields, this volume provides an interdisciplinary overview of the subject. Beginning with discussions about the definition of Pietism, the collection next looks at the social, political and cultural dimensions of Pietism in German-speaking Europe. This is then followed by a section investigating the attempts by German Pietists to establish new, religiously-based communities in North America. The collection concludes with discussions on new directions in Pietist research.	

Together these essays help situate Pietism in the broader Atlantic context, making an important contribution to understanding religious life in Europe and colonial North America during the eighteenth century.

Leading experts on German-American relations, German politics and German Studies from both sides of the Atlantic are contributing to this volume in honor of Gerry Kleinfeld, founder and executive director of the German Studies Association, founder and long-time editor of the German Studies Review. The essays cover a broad spectrum of German-American political, economic, and cultural relations, offering an up-to-date survey of recent developments in this highly topical field.

A Diary of the Nazi Years: 1942-1945 BRILL

Chikanga was one of Malawi's most powerful and successful healers who brought concepts and methods from indigenous tradition to his own Christian culture. During the fifties and sixties people having heard he had the power of divination to free them from the bondage of witchcraft and other evil practices, would make pilgrimages to him from the whole of eastern and southern Africa. His methods were, and are, popular and common, though always controversially opposed by the institutional Christian church. This book documents eye-witness accounts of pilgrims, and Chikanga's sessions and techniques, and includes interviews with his acquaintances. It describes his activities in the political context, which forced him to go into exile for seventeen years, and his final period in Malawi.

World Economic Forum Founder and Executive Chairman Klaus Schwab offers a practical companion and field guide to his previous book, The Fourth Industrial Revolution. Today, technology is changing everything—how we relate to one another, the way we work, how our economies and governments function, and even what it means to be human. One need not look hard to see how the incredible advances in artificial intelligence, cryptocurrencies, biotechnologies, and the internet of things are transforming society in unprecedented ways. But the Fourth Industrial Revolution is just beginning, says Schwab. And at a time of such tremendous uncertainty and such rapid change, he argues it's our actions as individuals and leaders that will determine the trajectory our future will take. We all have a responsibility - as citizens, businesses, and institutions - to work with the current of progress, not against it, to build a future that is ethical, inclusive, sustainable and prosperous. Drawing on contributions from 200 top experts in fields ranging from machine learning to geoen지니어ing to nanotechnology, to data ethics, Schwab equips readers with the practical tools to leverage the technologies of the future to leave the world better, safer, and more resilient than we found it.

A história do início do domínio nazista nas palavras da maior autoridade no assunto. Como tudo começou? Como os alemães puderam permanecer amando sua pátria sob o Nazismo e até mesmo contribuir para o seu extremismo? Foi atrás destas respostas que o historiador de Cambridge, Richard Evans, partiu e que resultou em um dos mais importantes trabalhos sobre o Terceiro Reich já feitos. A chegada do 3o Reich é o primeiro de três volumes do autor sobre o assunto e que serão publicados pela Planeta. Nesta primeira obra fundamental, Evans percorre o surgimento de uma cultura disseminada na Alemanha até a imposição do regime ditatorial, em 1933. Aclamado pela crítica internacional, o livro de Evans oferece um mergulho no pensamento nazista em uma linguagem acessível para leigos.

Winner of the National Jewish Book Award: "This valuable resource covers an aspect of the Holocaust rarely addressed and never in such detail." —Library Journal This is the first volume in a monumental seven-volume encyclopedia, reflecting years of work by the Jack, Joseph, and Morton

Mandel Center for Advanced Holocaust Studies at the United States Holocaust Memorial Museum, which will describe the universe of camps and ghettos—many thousands more than previously known—that the Nazis and their allies operated, from Norway to North Africa and from France to Russia. For the first time, a single reference work will provide detailed information on each individual site. This first volume covers three groups of camps: the early camps that the Nazis established in the first year of Hitler's rule, the major SS concentration camps with their constellations of subcamps, and the special camps for Polish and German children and adolescents. Overview essays provide context for each category, while each camp entry provides basic information about the site's purpose; prisoners; guards; working and living conditions; and key events in the camp's history. Material from personal testimonies helps convey the character of the site, while source citations provide a path to additional information.

In 1981, the Institute of Anesthesiology at the Ludwig Maximilian University of Munich organized a first international symposium on inhalation anesthetics. In 1982, the most important contributions were published in the series Anaesthesiology and Intensive Care Medicine. At that time, the interest of European anesthesiologists was focused on isoflurane, which had just been introduced for clinical purposes. Studies on this product had already been appearing for years in the American literature. This book deals once more with all three inhalation anesthetics, but places particular emphasis on isoflurane. In contrast to the situation in 1981, extensive experimental and clinical investigations on isoflurane have by now become available in the European literature. From its conception, the objective of this symposium was not to discuss the relative value of inhalation anesthesia (balanced anesthesia) as compared with intravenous anesthesia. On the contrary, the major effects and interactions of isoflurane were to be explored. The side effects and their relative significance in different patient groups were also of interest. Current knowledge concerning a range of topics related to inhalation anesthetics (especially isoflurane) was to be presented in a comprehensive and critical manner. The effects of isoflurane on the cardiovascular system were the focus of interest during the symposium and are accordingly dealt with extensively in this volume. The comparative effects on coronary perfusion of isoflurane, enflurane, and halothane are described in detail.

Destined to take its place alongside The Diary of Anne Frank and Elie Wiesel's Night as one of the great classics of the Holocaust, I Will Bear Witness is a timeless work of literature, the most eloquent and acute testament to have emerged from Hitler's Germany. Volume Two begins in 1942, the year the Final Solution was formally proposed, and carries us through to the Allied bombing of Dresden and Germany's defeat.

In July 2000 a conference was held to honour the 65th birthdays of four of the leading international figures in the field of quantum many-body theory. The joint research careers of John Clark, Alpo Kallio, Manfred Ristig and Sergio Rosati total some 150 years, and this festschrift celebrated their achievements. These cover a remarkably wide spectrum. The topics in this book reflect that diversity, ranging from formal aspects to real systems, including nuclear and subnuclear systems, quantum fluids and solids, quantum spin systems and strongly correlated electron systems. The book collects more than 30 invited contributions from eminent scientists, chosen both from among the participants at the conference and from colleagues who were unable to attend but nevertheless wished to contribute. To match the high standing of the honourees, the articles are of an exceptionally high quality. Together they provide a vivid overview of current work across the spectrum of quantum many-body theory. The book is based on documentary and biographical materials that have only recently become available. As the narrative follows the Institute for Social Research from Frankfurt am Main to Geneva, New York, and Los Angeles, and then back to Frankfurt, Wiggershaus continually ties the evolution of the school to the changing intellectual and political contexts in which it operated.

A Festschrift in Honour of the 65th Birthdays of John W. Clark, Alpo J. Kallio, Manfred L. Rising, Sergio Rosati : UMIST, Manchester, UK, July 10-14, 2000 LIT Verlag Münster

Inhaltsangabe:Abstract: Despite crises and uncertainty in international capital markets, foreign direct investment (FDI) by multinational enterprises (MNE) is booming. The buzzword is globalization. The business world is expected to be moving closer together through more or less recent developments in communication technologies and transportation facilities. The political ideal of democracy along with a liberalization of national economies seems to have finally gained the recognition it deserves as the system that in the end allows for the best utilization of wealth creating endowments. Besides differences in economic development, cultural differences remain as a single important means of distinguishing between people from several nations. The critical issue is that this situation is being recognized and mankind restrains from emphasizing distinctions, and instead focuses on working out compatibility between cultures. Culture has been given the attribute of being responsible for economic performance by several scholars over the past decade. The original aim has been at explaining the continuous growth of the economies of Asian NICs which, however, came to an abrupt and widely unexpected end on 2 July 1997. Still the importance of culture seems to have been underestimated, otherwise the crisis might have been foreseeable. If cultural factors are of significant importance for overall economic performance, i.e. on the macro-economic level, they must be of at least the same importance for the performance of companies that work within the particular culture, i.e. on the micro-economic level. In this case, not only local but international investors in particular are affected by their respective cultural environment as two - or even more - different cultures have to be brought to work together. Obviously, a consensus has to be found between influences from home and host country culture. This situation often is expected to be a threat to the economic performance of the MNE. However,

no existing culture in the world today can be viewed as superior to others in all aspects. Moreover, each culture has positive as well as negative factors. A MNE then, if it is able to effectively bring together several cultures in order to achieve one common goal, should be able to make use of the positive sides of the cultures at its different locations. Dunning & Bansal analyze the effects of culture on multinational enterprises applying John H. Dunning's Eclectic [...]

Particularly in the humanities and social sciences, festschriften are a popular forum for discussion. The JIBF provides quick and easy general access to these important resources for scholars and students. The festschriften are located in state and regional libraries and their bibliographic details are recorded. Since 1983, more than 639,000 articles from more than 29,500 festschriften, published between 1977 and 2010, have been catalogued.

This book presents to all those who are interested in the history of Anaesthesiology historical details and information on the development of anaesthesiology in Germany and the remarkable growth of our Society. At the founding session of the German Society of Anaesthesia in Munich on 10 April 1953 42 persons had signed the founding documents. Today about 12,000 anaesthetists

are members of the German Society of Anaesthesiology and Intensive Care Medicine, making the DGAI the biggest national society within ESA. Well known are the pioneering contributions of German scientists and surgeons to the development of general, regional and local anaesthesia during the 19th and the beginning of the 20th centuries. But less known outside Germany are the reasons for the delayed evolution of anaesthesiology as a specialty of its own in German medicine, far later than in the UK, Scandinavia or the USA. In this book you will find answers to this question and detailed information on the successful evolution of anaesthesiology especially at the Faculties of Medicine at German universities.

Reflexionen des Holocaust, Antisemitismus und Nationalsozialismus Berghahn Books

George Bell was one of the most significant British church leaders of the mid-20th century and in many ways he came to define the involvement of British church people with the issues which arose from the Third Reich. Gerhard Leibholz, a brother-in-law of Dietrich Bonhoeffer, was one of the most senior German lawyers of the period, a refugee from Nazism who would become a founding father of the new constitution of the Federal Republic of Germany. The two figures first encountered each other in the context of dictatorship and exile and in a brilliant, sustained collaboration over many years they fashioned a vigorous moral response to the crises of Nazism, Soviet communism, total war and cold war. This volume contributes fundamentally to our understanding of the ethical, religious, legal and political debates which Hitler's regime provoked. It also brings to life a vivid picture of the realities of exile and the networks of support which were active internationally in the great refugee crisis of these momentous years. With its wealth of primary source material, previously unavailable in English, this book is an important contribution to the historiography of the Third Reich and will be of great value to scholars and students of Nazism and international history.
