This book teaches
Facilities Management
(FM) practitioners the
steps that can help
them take decisive
steps towards creating
clarity and direction in
FM. There is something
in this book for both
seasoned and new FM
practitioners as both
face the same problem
- their function is
viewed as non-
strategic, a support
role, and a cost centre.
As a result of that,
many FM practitioners
are out of synch with
the core business
activities of their
different organizations
and are not fulfilled in
their roles. To help
them out of their

misery, the author
shares professional
pieces of timely advice
to help FM
practitioners to not just
practice FM the right
way, but to also be
knowledgeable enough
to position their
functions as a strategic
one. The book bridges
the gap between what
is desired in FM and
what the reader
already knows in a
deliberate attempt at
offering solutions that
cut across the industry.
"What is Facilities
Management All
About?" tackles the
challenges facing FM in
a ground-up approach.
First, the book seeks to
get readers to be
aligned with FM
identity and proceeds
to outline ways in
which practitioners can
make FM a value
centre instead of a cost
centre or a profit

centre. At the end of the book, readers will be more informed about the identity of FM, the mission of FM, and the core responsibilities of FM. With this knowledge, they can be in a better position to relate their function to top executives in their organization so as to elevate it to a strategic one. Hence, the book is a must-read for both new and seasoned FM practitioners.

This book adopts a multidimensional approach to explain

current practices and trends in facility management. Presenting both research and practical insights from around the globe and providing definitions, examples and case studies, it allows readers to gain an understanding of corporate real estate, as well as asset, property, and facility management in the context of digital transformation, sustainability practice and process optimisation. The authors also discuss the latest trends in workplace management, the use of emerging technologies to optimise provision of facility services, and change management to implement new processes and

reporting. A good mix of theory and practice, including a diverse set of examples, provide a constructive learning experience to the reader.

sectors including offices, retail and manufacturing. It explains the facilities manager's role in incorporating sustainability into the whole life-cycle of a building - from initial briefing to final disposal. The book takes a structured approach:

- masterplanning and real estate (acquisitions and disposals)
- design
- construction and commissioning
- refurbishment, fit-out and project management
- maintenance

operation • occupant satisfaction.
Sustainable Practice for the Facilities Manager fills a the gap between the policy-level sustainability books and the detailed technical documents by focusing on the 'what' and 'how' of planning and implementing sound environmental management practices in the context of FM operations. It covers policy and trends on global, European and UK levels affecting businesses; compliance requirements for organisations - including some sector-specific areas; and best practice, with good and bad case studies showing the business benefits of incorporating sustainable practice into day-to-

day activities. The book is for:

- facilities management professionals
- public and private organisations owning properties
- property companies
- institutional investors
- building services or supplier organisations

and will help you deliver an improved operationally performing facility.

Loaded with procedures, checklists, guidelines, samples, and templates, The Facilitator's Fieldbook covers all the key areas of successful team management, including establishing ground rules, planning meetings and agendas, brainstorming, resolving conflict, making decisions, and helping groups optimize their time.

The completely revised third edition of this

longtime go-to resource for novice and experienced facilitators provides new team-building exercises as well as updated information on virtual meetings, mediation, strategic planning, and much more. You'll also gain tips on maintaining the tone and flow of meetings, and will learn to determine when to delegate projects to individuals rather than assembling a group. Collaborative projects have become an increasingly prevalent feature of modern business strategies and workplace dynamics. But intentional, strategic facilitation is essential to making sure these groups and teams are effective. The Facilitator's Fieldbook provides readers the

comprehensive tools and knowledge they need to help their teams--and, ultimately, their organizations--succeed.

Strategic Facility Planning AMACOM

A comprehensive look at the impact of technology on facility managers. Facility managers are tasked with operating and maintaining the built environment. Technology plays a big role in this function, and often facility managers are asked to install, implement, and work with a variety of technologies without any prior experience in information technology. *Technology for Facility Managers* presents the cutting-edge technology that facility managers will come

across in their careers. Each chapter covers a different technology and includes an overview and basic primer about the technology—the current use of the technology, how it's evolving, and how it will impact the practice of facility management in the future—and is complemented with case studies that address how the technology was implemented and the effect it had on the organization. Technologies covered include: Building information modeling (BIM) Building automation systems (BAS) FM automation (CAFM/IWMS) Condition assessment/life cycle analysis Radio frequency identification (RFID) Geographic information

systems (GIS) Social networking Sustainability and energy analysis Information and communications technology (ICT) Workflow technology that supports standards such as Business Process Modeling Notation (BPMN) and those developed by the Workflow Management Coalition (WfMC) Technology for Facility Managers is appropriate as a textbook for IFMA Accredited Degree Programs and as a resource for professionals studying for certification through IFMA.

Proceedings from IFMA '90 Createspace Independent Publishing Platform Facilities management

is a diverse field that demands a lot from its practitioners. Despite this, the fact that senior management of organizations still sees facilities management as a cost center is upsetting. As a result of this misconception, facilities management budget is often subjected to countless reviews, which usually ends in the budget being cut. The eventual lack of fund caused by these budget cuts has a significant effect on FM in delivering its duties. Even with so little, so much is expected of the FM department. If FM doesn't show signs of being a good steward with the funds entrusted in their care, winning next budget proposals becomes nearly impossible and such an event would

further reduce the performance rating of FM. With a low-performance rating, the already below-par image of FM in the eyes of senior management will take further hits. And FM will continually struggle before it wins funds for the execution of the facilities services workplan and facilities improvement initiatives. To help both new and seasoned FM practitioners to be good financial stewards, this author has penned an experience-based book on how FM practitioners can become pros at the game of financial numbers articulate the value of facilities services and initiatives in financial language that is understood by the senior

management. This book not only teaches you how to prepare the different types of FM budget and financial feasibility analysis, but it also walks you through the entire process of negotiating budget and allocating funds to carefully crafted FM workplan.

The tools of the CAFM are called CAFM software, CAFM applications or CAFM systems. The International Facility Management

Association (IFMA) defines facility management as the practice of coordinating the physical workplace with the people and work of the organization. It integrates the principles of business administration, architecture and the behavioral and engineering sciences. As such, facility management has been practiced, whether specifically identified as its own discipline or not, since the inception of the business organization. It has evolved over the years through the development and codification of processes into a clearly defined field of expertise. The IFMA classifies facility management

responsibilities into several major functional areas: CAFM evolved in the late 1980s leveraging the PC to automate the collection and maintenance of facilities management information. Typically, they track and maintain the following core facilities items: While CAFM systems have...
