Marine algae are the supreme eco-engineers of life: they oxygenate the waters, create habitat for countless other organisms, and form the base of a food chain that keeps our planet unique in the universe as we know it. In this beautiful volume Josie Iselin explores both the artistic and the biological presence of sixteen seaweeds and kelps that live in the thin region where the Pacific Ocean converges with the North American continent--a place of incomparable richness. Each species receives a detailed description of its structure, ecological importance, and humans' scientific inquiry into it, told in scientifically illuminating yet deeply reverent and inspired prose. Throughout the writings are historical botanical illustrations and Iselin's signature, Marimekko-like portraits of each specimen that reveal their vibrant colors--whether rosy, "olivaceous," or grass-green--and whimsical shapes. Iselin posits that we can learn not only about the seaweeds but also from them: their resilience, their resourcefulness, their poetry and magic.

Lebbeus Woods, Architect brings together drawings from the past 40 years by one of the most influential designers working in architecture. Beyond architects, Woods (1940-2012) has been hailed by designers, filmmakers, writers and artists as a significant voice in recent history; his works resonate across many disciplines for their conceptual depth, imaginative breadth and ethical potency. Woods worked cyclically, returning often to themes of architecture's ability to transform, resist and free the collective and the individual. As an architect whose work lies almost solely in the realm of the proposed and the unbuilt, his contributions to the field opened up new avenues for exploring and inscribing space. The publication centers on transformation as a recurring theme. The organization of the images of works is thematic rather than chronological.
