### GUNNER ASHTYN

**An Educator's Guide to Equity** Simon and Schuster

With economic winter facing many healthcare and health education budgets, the high costs of medical education are bringing it under close scrutiny. However, the costs of not providing high quality medical education - not least human costs in morbidity and mortality from medical error - are also high, presenting medical educators, funding managers, policy makers and economists with an unenviable dilemma. To add to their difficulties, remarkably little has been written on cost effectiveness in medical education, including how to calculate costs, how to get maximal value for money and even what constitutes value for money. In this book, the first of its kind, world leading experts comprehensively outline what is known about cost effectiveness in each of their fields. Undergraduate, postgraduate and continuing professional education are all explored, as are e-learning, simulation, cost benefit analysis and numerous other areas. Lecturers and researchers in medical education, clinical tutors and educational supervisors and appraisers, managers responsible for funding medical education and health economists and health policy makers and shapers will find this an invaluable resource.

*Research-Based Practice* Radcliffe Publishing

This book offers a remarkable range of research that emphasises the need to analyse the shaping of curricula under historical, social and political variables. Teachers' life stories, the Cold War as a contextual element that framed curricular transformations in the US and Europe, and the study of trends in education policy at transnational level are issues addressed throughout. The book presents new lines of work, offering multidisciplinary perspectives and provides an overview of how to move forwards. The book brings together the work of international specialists on Curriculum History and presents research that offers new perspectives and methodologies from which to approach the study of the History of Education and Educational Policy. It offers new debates which rethink the historical study of the curriculum and offers a strong interdisciplinary approach, with contributions across Education, History and the Social Sciences. This book will be of great interest for academics and researchers in the fields of education and curriculum studies. It will also appeal to educational professionals, teachers and policy makers.

*Observation Skills for Effective Teaching* SAGE

In a context of increased politicization led by state and federal policymakers, corporate reformers, and for-profit educational organizations, The Politics of Education Policy in an Era of Inequality explores a new vision for leading schools grounded in culturally relevant advocacy and social justice theories. This timely volume tackles the origins and implications of growing accountability for educational leaders and reconsiders the role that educational leaders should and can play in education policy and political processes. This book provides a critical perspective and analysis of today's education policy landscape and leadership practice; explores the challenges and opportunities associated with teaching in and leading schools; and examines the structural, political, and cultural interactions among school principals, district leaders, and state and federal policy actors. An important resource for practicing and aspiring leaders, The Politics of Education Policy in an Era of Inequality shares a theoretical framework and strategies for building bridges between education researchers, practitioners, and policymakers.

*Blended Coaching* Routledge

This book reflects the editors' concerns that too many public discussions of education are dominated by too few ideas, and is intended to serve as a kind of handbook for those who wish to enter the conversation about education. A work of impressive scholarship accessible to the general reader. A unique collection of essays written by internationally recognized and emerging thinkers from the field of education and related disciplines. Contributors, among others, include Anthony Appiah (Princeton); Seyla Benhabib (Yale); Eamonn Callan (Stanford); Joseph Dunne (St. Patrick's College, Ireland); Kieran Egan (Simon Fraser); Ursula Franklin (Toronto); Nel Noddings (Stanford); Martha Nussbaum (Chicago) and Diane Ravitch (New York)

*The TEACCH Approach to Autism Spectrum Disorders* Routledge

What type of practice makes a musician perfect? What sort of child is most likely to succeed on a musical instrument? What practice strategies yield the fastest improvement in skills such as sight-reading, memorization, and intonation? Scientific and psychological research can offer answers to these and other questions that musicians face every day. In *The Science and Psychology of Music Performance*, Richard Parncutt and Gary McPherson assemble relevant current research findings and make them accessible to musicians and music educators. This book describes new approaches to teaching music, learning music, and making music at all educational and skill levels. Each chapter represents the collaboration between a music researcher (usually a music psychologist) and a performer or music educator. This combination of expertise results in excellent practical advice. Readers will learn, for example, that they are in the majority (57%) if they experience rapid heartbeat before performances; the chapter devoted to performance anxiety will help them decide whether beta-blocker medication, hypnotherapy, or the Alexander Technique of relaxation might alleviate their stage fright. Another chapter outlines a step-by-step method for introducing children to musical notation, firmly based on research in cognitive development. Altogether, the 21 chapters cover the personal, environmental, and acoustical influences that shape the learning and performance of music.

*Perspectives on Learning, 5th Edition* John Wiley & Sons

From the schools of ancient times to the present day, Gary Thomas explores how and why education has evolved as it has. Examining education worldwide, he explains the way schools work, noting how curricula are remarkably consistent around the world. Delving into some of the big questions, Thomas explores the history of education in this Very Short Introduction. Considering various styles such as progressive versus formal, he also explores the ideas of some of the big theorists, including Piaget and Vygotsky. Looking at different forms of education and styles of teaching, he considers the ways in which education is being improved by matching styles of learning to teaching, and ensuring that schools are more inclusive and meaningful for a broader range of students. He finishes by considering the ways in which education may develop over the coming century. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

The sixth edition of *Observation Skills for Effective Teaching* focuses on observing others and incorporating the right tools, knowledge, and skills into your own practice - key principal means by which you can become an effective and professional teacher. Using this text, you will learn to observe in the following eight areas: learning climate, classroom management, lesson clarity, instructional variety, task orientation, student engagement, student success, and higher thought processes. These eight areas have been found by researchers to be related to desirable cognitive, social, and emotional outcomes in learners. This book will also teach you how to decide what to observe, how to effectively and efficiently observe in the classroom, and how to apply what you have learned through observation to grow as a reflective teacher. In addition, the book provides methodological concepts, observation instruments, and dialogues designed to help you see and practice research-based patterns of effective teaching. Rather than simply outlining the classical and modern theories of learning, this widely adopted text brings the material to life through case studies that engage students in debates about what really happens in classrooms. Students are encouraged to test the strengths and weaknesses of each theory so that, ultimately, they will learn to formulate their own philosophies of teaching and learning. The new Fifth Edition of *Perspectives on Learning* features: A discussion of common sense and learning theories. A new chapter on Transfer of Learning. Consideration of recent developments in brain science. A thoroughly updated list of Recommendations for Further Reading. *Perspectives on Learning* is one of the five books in the highly regarded Teachers College Press *Thinking About Education* Series, now in its Fifth Edition. All of the books in this series are designed to help pre- and in-service teachers bridge the gap between theory and practice. D. C. Phillips is Professor of Education and Philosophy Emeritus, School of Education at

Stanford University. Jonas F. Soltis William Heard Kilpatrick Professor Emeritus of Philosophy and Education at Teachers College, Columbia University. "A great little book packed with conceptual contrasts and rich classroom vignettes. The best resource I've found for teaching about theories of learning in a liberal arts college." —Jack Dougherty, Trinity College, Hartford, CT "A well-written and readable book. Phillips and Soltis should be commended for bringing together these various perspectives on learning that can be used by both pre-service and in-service teachers. The case studies presented help illustrate the theories and should facilitate active class discussions." —The Professional Educator

#### **The Struggle for the History of Education** Routledge

Narrative Inquiry in Language Teaching and Learning Research provides an entry-level introduction to research methods using stories, as data or as a means of presenting findings, that is grounded in published empirical research within the field of language teaching and learning. It discusses basic definitions and concepts in narrative inquiry, explains how and why narrative methods have been used in language teaching and learning research, and outlines the different approaches and topics covered by this research. It also examines the different ways of eliciting, analyzing, and presenting narrative inquiry data. Narrative inquiry offers exciting prospects for language teaching and learning research and this book is the first focused and practical guide for readers who are interested in understanding or carrying out narrative studies.

#### **We Can't Lead where We Won't Go** Thinking about Education

Exploring Educational Research Literacy offers beginning classroom teachers a comprehensive introduction to the topic of educational research literacy—that is, the ability to read educational research articles in a systemic and critical way. Many beginning teacher education students are expected to be familiar with the latest research in their field, but are not necessarily researchers themselves. In fact, many new students have had little exposure to educational research. In this accessible text, Gary Shank and Launcelot Brown give students step-by-step guidance through the often baffling process of learning a new 'language' of research methods. Using clear and friendly language, and employing simple articles created to introduce students to important ideas in an engaging manner, Exploring Educational Research Literacy gives students the tools to shift from being passive consumers of research to active and critical readers capable of evaluating research and judging the usefulness of the findings for educational practice. Features include: CD-ROM including ten real research articles and eight "training" articles: Each lets students practice their research literacy skills and includes a list of questions to guide students in their reading" 'Practice Makes Perfect': end of the chapter reflection activities that prompt students to apply research skills described in each chapter Article Literacy Checklist: a guide to help students read research articles critically Glossary of key terms Clear and engaging style: Exploring Educational Research Literacy is written so that even students who are new to educational research can gain a clear understanding of and ability to apply the special skills needed to read research articles

This new edition deepens the discussion of race and social justice in education with many updates, including a new section entitled The Whiteness of School Reform. Widely used for teacher preparation and in-service professional development, it speaks to what good teachers know, what they do, and how they embrace culturally responsive teaching.

#### **The Science and Psychology of Music Performance** Longman Publishing Group

Discovering the Scientist Within is the only book on the market that teaches students about research methods using a case study approach. All the design-focused chapters present students with a single study described from start to finish. The chapter starts by asking students to consider a scenario and then walks them through the steps of the study: formulating a research question, performing a literature review, constructing a data collection method, considering ethics, refining the method, gathering data, understanding the statistical results, and reporting the results in APA style. Students come away with a practical understanding of the research process and useful practice in the basic steps that comprise all studies. The book also has excellent pedagogy, starting with clear Learning Outcomes at the beginning of each chapter, "Your Turn" assessments as the end of each section, and end-of-chapter Review Questions and Applying What You've Learned activities. As part of their class projects, students are often asked to run some statistics and write in APA style. This text has ample support for both, including Appendices on both topics, as well as in-chapter material modeling writing and reporting in APA style. Best of all, the book comes integrated with new Research in Action activities from the same author team. These activities extend the core mission of the book by putting students in the role of a researcher and simulating the kinds of decisions they would face in conceptualizing and executing a study. Each chapter includes an activity (a few chapters have more than one), and the activities are called out in the chapter. The new edition features coverage of "fake news," as well as "Our Research Plan at a Glance," a summary of the study featured in each chapter. The book is also available in a LaunchPad course for the first time. Students will have access to the full eBook, the LearningCurve adaptive quizzing system, the Research in Action activities, and other resources. This book also comes with an unprecedented set of instructor supplements, many of them prepared by the authors themselves. These include a full instructor's manual, including supplemental examples for each chapter, suggestions for in-class activities and demonstrations, lab/group project ideas, a feature designed to enhance psychological/information literacy, and suggestions for using end of chapter materials. Instructors also get access to unique PowerPoint slide decks that incorporate the same active learning and hands-on approach as the textbook. Chapter PowerPoint slides include additional examples, discussion questions, demonstrations and activities built right into the presentation to help bring the material to life. For design chapters, they provide two sets of PowerPoint slides: one set that incorporates the chapter's research question and a more traditional set that focuses on key concepts.

Winner of the American Bridge Teachers' Association Book of the Year award in its original self-published edition, this book takes an entirely new approach to teaching bridge. It is intended to be a short first course on bridge for newcomers to the game. No prior experience with any card game is necessary, and the ideas are developed in short, easy steps. Gary Brown is a Canadian who now lives in Melbourne, where he runs the Brown School of Bridge. A successful tournament player, he is also an experienced high school teacher, and ideal background for his current profession. A regular columnist for two bridge magazines, he is already working on his next book.

#### Learning and teaching across the 11-16 age range Routledge

In his writings, lifelong educator Gary Millen reveals how helping others became a richly rewarding aspect of his life. His teaching, mentoring and civic involvement exposed him to all ages and backgrounds throughout his education career. Starting at an early age and continuing throughout his life, his stories provide inspiring and relevant lessons for parents, students, fellow educators, and just about anyone else who cares about their own or others' success. Writing this book is but one example of how he still finds time to follow his passion for helping others. Seeing our collective need to do so much more to prepare today's youth and tomorrow's leaders was the principal motivation for this book. Providing the lacking but vital life skills could prevent many from making the wrong choices that haunt so many for their entire lives. The secrets of success need not and should not be secrets! The author hopes to show how proactivity on his part and on the part of others was always the right approach.
