This book contains the first systematic and detailed exposition of the linear theory of the stationary electron transport phenomena in semiconductors. Arbitrary isotropic and anisotropic nonparabolic bands as well as p-Ge-type bands are considered. Phonon drag effect are taken account of in an arbitrary nonquantizing magnetic field. Scattering theory is discussed in detail with account taken of the Bloch wave functions effect. Transport phenomena in the quantizing magnetic field are studied as well as the size effects in thin films. Band structures of the semiconductors and semiconductor compounds of interest are also considered.The main part of the book deals with the three important problems: charge carrier statistics in a semiconductor, classical and quantum theory of the electron transport phenomena. All the theoretical results considered as well as the validity conditions are presented in the form which may be directly used to interpret experimental data. <i>The Western Question in Greece and Turkey</i> Woodhead Publishing		This publication draws conclusions from IIEP's research into ethics and corruption in education. It defines the key concepts of corruption, transparency, accountability and ethics and identifies the main opportunities for corruption in education. It then looks at tools that can be used to assess corruption problems such as perception and tracking surveys. Lessons are drawn from strategies used worldwide to improve transparency and accountability in educational management. Siyavush of Our Century UNESCO		Studies in Islamic Civilization draws upon the works of Western scholars to make the case that without the tremendous contribution of the Muslim world there would have been no Renaissance in Europe. For almost a thousand years Islam was arguably one of the leading civilizations of the world spanning a geographic area greater than any other. It eliminated social distinctions between classes and races, made clear that people should enjoy the bounties of the earth provided they did not ignore morals and ethics, and rescued knowledge that would have been lost, if not forever, then at least for centuries. The genius of its scholars triggered the intellectual tradition of Europe and for over seven hundred years its language, Arabic, was the international language of science. Strange then that its legacy lies largely ignored and buried in time. In the words of Aldous Huxley, “Great is truth, but still greater, from a practical point of view, is silence about truth. By simply not mentioning certain subjects... propagandists have influenced opinion much more effectively than they could have by the most eloquent denunciations.” Studies in Islamic Civilization is a compelling attempt to redress this wrong and restore the historical truths of a “golden age” that ushered in the Islamic renaissance, and as a by-product that of the West. In doing so it gives a bird’s eye view of the achievements of a culture that at its height was considered the model of human progress and development. (2010). "Siyavush of Our Century" was written by political visionary Mammad Amin Rasulzadeh (1884-1955) who headed the Musavat Party and helped set up the Azerbaijan parliamentary democratic republic in 1918, the first such republic of Turks and Muslims in the eastern world. The turmoil of the times, however, proved too much for Rasulzadeh's young government. On April 25, 1920, Bolshevik troops crossed into Azerbaijan and entered Baku on April 28. They demanded the resignation of Azerbaijan's Parliament and set up their own government. The fledgling democracy, in only its 23rd month, collapsed immediately. Azerbaijan remained under communist rule until the collapse of the Soviet Union in 1991. "Siyavush of Our Century" is a unique work of politics & history, philosophy & literature founded upon the ancient myths and legends of the Turkik peoples. It was written in July		

of chalcogenide glasses, including the thermal properties, structure, and optical properties, before going on to discuss mean coordination and topological constraints in chalcogenide network glasses, and the photo-induced phenomena in chalcogenide glasses. Astronomy is one of the oldest sciences, and one which has repeatedly led to fundamental changes in our view of the world. This book covers the history of our study of the cosmos from prehistory through to a survey of modern astronomy and astrophysics (sure to be of interest to future historians of twentieth-century astronomy). It does not attempt to cover everything, but deliberately concentrates on the important themes and topics. These include stellar astronomy in the seventeenth and eighteenth centuries, at the time subordinate to the study of the solar system, but the source of many important concepts in modern astronomy, and the Copernican revolution, which led to the challenge of ancient authorities in many areas, not just astronomy. This is an essential text for students of the history of science and for students of astronomy who require a historical background to their studies.
