N.E.A. Bulletin Routledge

Human error is implicated in nearly all aviation accidents, yet most investigation and prevention programs are not designed around any theoretical framework of human error. Appropriate for all levels of expertise, the book provides the knowledge and tools required to conduct a human error analysis of accidents, regardless of operational setting (i.e. military, commercial, or general aviation). The book contains a complete description of the Human Factors Analysis and Classification System (HFACS), which incorporates James Reason's model of latent and active failures as a foundation. Widely disseminated among military and civilian organizations, HFACS encompasses all aspects of human error, including the conditions of operators and elements of supervisory and organizational failure. It attracts a very broad readership. Specifically, the book serves as the main textbook for a course in aviation accident investigation taught by one of the authors at the University of Illinois. This book will also be used in courses designed for military safety officers and flight surgeons in the U.S. Navy, Army and the Canadian Defense Force, who currently utilize the HFACS system during aviation accident investigations. Additionally, the book has been incorporated into the popular workshop on accident analysis and prevention provided by the authors at several professional conferences world-wide. The book is also targeted for students attending Embry-Riddle Aeronautical University which has satellite campuses throughout the world and offers a course in human factors accident investigation for many of its majors. In addition, the book will be incorporated into courses offered by Transportation Safety International and the Southern California Safety Institute. Finally, this book serves as an excellent reference guide for many safety professionals and investigators already in the field.

The GHG Protocol Corporate Accounting and Reporting Standard helps companies and other organizations to identify, calculate, and report GHG emissions. It is designed to set the standard for accurate, complete, consistent, relevant and transparent accounting and reporting of GHG emissions. Fiftieth anniversary yearbook and list of active members of the National Educational Association

Markets emerge in recent historical research as important spheres of economic interaction in ancient societies. In the case of ancient Egypt, traditional models imagined an all-encompassing centralized, bureaucratic economy that left practically no place for market transactions, as many surviving documents only described the activities of the royal palace and of huge institutions, mainly temples. Yet scattered references in the sources reveal that markets and traders were crucial actors in the economic life of ancient Egypt. In this perspective, this volume aims to discuss the role of markets, traders and economic interaction (not necessarily organized through markets) and the use of "money" (metals, valuable commodities) in pre-modern societies, based on archaeological, anthropological, and historical evidence. Furthermore, it intends to integrate different perspectives about the social organization of transactions and exchanges and the different forms taken by markets, from meeting places where exchanges operated under ritualized procedures and conventions, to markets in which profit-seeking activities were marginal in respect with other practices that stressed, on the contrary, community collaboration. The book also deals with social forms of pre-modern exchanges in which trust and ethnic solidarity guaranteed the validity of commercial operations in the absence of formal codes of laws or accepted authorities over long distances (trade diasporas, guilds, etc.). Finally, the volume analyzes a critical aspect of small-scale trade and markets, such as the commercialization of agricultural household production and its impact on the peasant economic strategies. In all, the book covers a diversity of topics in which recent research in the fields of economic sociology, archaeology, anthropology, economics, and history proves invaluable in order to analyze the role of Egyptian trade in a broader perspective, as well as to suggest new venues of comparative research, theoretical reflection, and dialogue between Egyptology and social sciences.
