This book moves scholarly debates beyond the old question of whether or not international institutions matter in order to examine how they matter, even in a world of power politics. Power politics and international institutions are often studied as two separate domains, but this is in need of rethinking because today most states strategically use institutions to further their interests. Anders Wivel, T.V. Paul, and the international group of contributing authors update our understanding of how institutions are viewed among the major theoretical paradigms in international relations, and they seek to bridge the divides. Empirical chapters examine specific institutions in practice, including the United Nations, International Atomic Energy Agency, and the European Union. The book also points the way to future research. International Institutions and Power Politics provides insights for both international relations theory and practical matters of foreign affairs, and it will be essential reading for all international relations scholars and advanced students.

One of the myths surrounding Arabic is that the script is impossible to learn. This is not true. Writing Arabic is much easier than you would imagine. Arabic uses an alphabet, not hieroglyphs or pictograms. And there are far fewer shapes to master in Arabic than in the European languages. In Arabic there is really only one basic shape for each of the 28 letters of the alphabet. There are no capital letters and there is no real distinction between print and handwriting. Furthermore, writing from right to left is not as difficult as many people would imagine. In many ways it is a more natural movement to be pushing the pen rather than pulling it, certainly for someone who is right handed. This guide will take you through the Arabic alphabet, letter by letter, explain how to write each letter, how to combine the letters, and it will provide plenty of opportunities for practise. This guide is also a great first introduction to the Arabic language.
