The syllabus for the FRCS (ORL-HNS) is vast, and a sound preparation for the exams has traditionally involved assimilating knowledge from a wide range of sources. This book provides a focussed guide for exam candidates. More than a question and answer book, this book is a coaching manual. Each section features a combination of model answers, pearls of wisdom, checklists and pointers for further reading. Detailed advice is provided for both Part 1 and Part 2 of the examination. Viva topics that have featured in the exam in recent years have been included. and have then been supplemented by invaluable editorial contributions from leaders in each of the subspecialties. Trainees frequently comment that exam preparation is an enlightening process and the knowledge gained would have served them well during their time as an ENT registrar or Otorhinolaryngology resident. This book will also serve as a valuable learning tool for trainees as early as ST3 and facilitate their development of effective and safe clinical practice.

Logan Turner's Diseases of the Nose, Throat and Ear, Volume 10 is intended to serve as a preparatory volume for senior students, general practitioners, and trainees in otolaryngology preparing for a fellowship examination in otolaryngology. The authors of this volume tried not to confine their presentations to pathology in Northern Europe given differences in the presentation of pathology in developed and the developing countries and the popularity of this book in Middle East, the Indian Subcontinent, and South East Asia. This book is organized into four main sections. The first three sections cover the anatomy, physiology, and diseases of the nose, head and neck, and the ear. The final section deals with pediatric otolaryngology. Several changes were made in this tenth volume. These include the presentation of otology, audiology, and otoneurology as an integrated whole; the rewriting of the section of rhinology; addition of a section on pediatric otolaryngology; and modification and expansion of the section on head and neck surgery. This book will be of

interest to senior students, general practitioners, and trainees in otolaryngology.

It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations. Jean Drèze has a rare and distinctive understanding of the Indian economy and its relationship with the social life of ordinary people. He has travelled widely in rural India and done fieldwork of a kind that few economists have attempted. In Sense and Solidarity Drèze offers unique insight on issues of hunger, inequality, conflict, and the evolution of social policy in India over roughly the past two decades. Historic legislations and initiatives of the period, relating for instance to the right to food and the right to work, are all scrutinised and explained, as are the fierce debates that often accompanied them. "Jholawala" has become a disparaging term for activists in the Indian business media. This book affirms the learning value of collective action combined with sound economic analysis. In his detailed introduction, the author argues for an approach to development economics where research and action are complementary and interconnected. Sense and Solidarity spans the gamut of critical social policies, from education and health to poverty, nutrition, child care, corruption, employment, and social security. There are also less predictable topics such as the caste system, corporate power, nuclear disarmament, the Gujarat model, the Kashmir conflict, and universal basic income. Sense and Solidarity enlarges the boundaries of social development towards a broad concern with the sort of society we want to create.

This textbook has been conceptualized to provide a detailed description of the various aspects of Systems and Synthetic Biology, keeping the requirements of M.Sc. and Ph.D. students in mind. Also, it is hoped that this book will mentor young scientists who are willing to contribute to this area but do not know from where to begin. The book has been divided into two sections. The first section will deal with systems biology - in terms of the foundational understanding, highlighting issues in biological complexity, methods of analysis and various aspects of modelling. The second section deals with the engineering concepts, design strategies of the biological systems ranging from simple DNA/RNA fragments, switches and oscillators, molecular pathways to a complete synthetic cell will be described. Finally, the book will offer expert opinions in legal, safety, security and social issues to present a well-balanced information both for students and scientists.
