This publication considers how cinema, as a major modern art form, has covered topics relating to the Holocaust in documentaries and fiction, historical reconstructions and more symbolic films, focusing on the question of realism in ethical and artistic terms. It explores a range of issues, including whether cinema is an appropriate method for informing people about the Holocaust compared to other media such as CD-ROMs, video or archive collections; whether it is possible to inform and appeal to the emotions without being explicit; and how the medium can nurture greater sensitivity among increasingly younger audiences which have been inured by the many images of violence conveyed in the media. Films discussed include Schindler's List, Life is Beautiful, The Pianist, Sophie's Choice, Shoah, Au revoir les enfants, The Great Dictator and To Be or Not to Be.

This book introduces the Zynq MPSoC (Multi-Processor System-on-Chip), an embedded device from Xilinx. The Zynq MPSoC combines a sophisticated processing system that includes ARM Cortex-A53 applications and ARM Cortex-R5 real-time processors, with FPGA programmable logic. As well as guiding the reader through the architecture of the device, design tools and methods are also covered in detail: both the conventional hardware/software co-design approach, and the newer software-defined methodology using Xilinx's SDx development environment. Featured aspects of Zynq MPSoC design include hardware and software development, multiprocessing, safety, security and platform management, and system booting. There are also special features on PYNQ, the Python-based framework for Zynq devices, and machine learning applications. This book should serve as a useful guide for those working with Zynq MPSoC, and equally as a reference for technical managers wishing to gain familiarity with the device and its associated design methodologies.

From Vogue contributor and Guardian columnist Hadley Freeman, a personalized guide to eighties movies that describes why they changed movie-making forever—featuring exclusive interviews with the producers, directors, writers and stars of the best cult classics. For Hadley Freeman, movies of the 1980s have simply got it all. Comedy in Three Men and a Baby, Hannah and Her Sisters, Ghostbusters, and Back to the Future; all a teenager needs to know in Pretty in Pink, Ferris Bueller's Day Off, Say Anything, The Breakfast Club, and Mystic Pizza; the ultimate in action from Top Gun, Die Hard, Beverly Hills Cop, and Indiana

Jones and the Temple of Doom; love and sex in 9 1/2 Weeks, Splash, About Last Night, The Big Chill, and Bull Durham; and family fun in The Little Mermaid, ET, Big, Parenthood, and Lean On Me. In Life Moves Pretty Fast, Hadley puts her obsessive movie geekery to good use, detailing the decade's key players, genres, and tropes. She looks back on a cinematic world in which bankers are invariably evil, where children are always wiser than adults, where science is embraced with an intense enthusiasm, and the future viewed with giddy excitement. And, she considers how the changes between movies then and movies today say so much about society's changing expectations of women, young people, and art—and explains why Pretty in Pink should be put on school syllabuses immediately. From how John Hughes discovered Molly Ringwald, to how the friendship between Dan Aykroyd and John Belushi influenced the evolution of comedy, and how Eddie Murphy made America believe that race can be transcended, this is a "highly personal, witty love letter to eighties movies, but also an intellectually vigorous, well-researched take on the changing times of the film industry" (The Guardian).

Sustainability covers environmental, social and economic dimensions, and requires a multi-disciplinary approach in order to examine, explore and critically engage with issues and advances in its related areas. As we are aware, climate change is a certainty and it affects many economic sectors, including agriculture, particularly production of crop and livestock enterprises. Vast regional differences in these impacts are expected for various parts of the world, culminating in changes in trade patterns, and perhaps eventually even threatening the food security in certain parts of the world. Agricultural sustainability may be especially threatened by climate extremes, such as heat waves, droughts, and floods. However, not all changes induced by climate change would be negative; some may even be positive. Undoubtedly, there would be winners and losers within a nation, as well as among countries. Achieving sustainability would require changes in the way we manage agriculture. Equally important in this discourse is to find solutions to achieve sustainability in the wake of climate change, one of the major threats to sustainability. This book is devoted to various aspect of sustainable agriculture and climate change and their interplay.

The proliferation of Internet of Things (IoT) has enabled rapid enhancements for applications, not only in home and environment scenarios, but also in factory automation. Now, Industrial Internet of Things (IIoT) offers all the advantages of IoT to industry, with applications ranging from remote sensing and actuating, to de-centralization and autonomy. In this book, the editor presents the IIoT and its place during the new industrial revolution (Industry 4.0) as it takes us to a better, sustainable, automated, and safer world. The book covers the cross relations and implications of IIoT with existing wired/wireless communication/networking and safety technologies of the Industrial Networks. Moreover, the book includes practical use-case scenarios from the industry for the application of IIoT on smart factories, smart cities, and smart grids. IoT-driven advances in commercial and industrial building lighting and in street lighting are presented as an example to shed light on the application domain of IIoT. The state of the art in Industrial Automation is also presented to give a better understanding of the enabling technologies, potential advantages, and challenges of the Industry 4.0 and IIoT. Finally, yet importantly, the security section of the book covers the cyber-security related needs of the IIoT users and the services that might address these needs. User privacy, data ownership, and proprietary information handling related to IIoT networks are all investigated. Intrusion prevention, detection, and mitigation are all covered at the conclusion of the book.

WHAT IS THE STORY GRID? The Story Grid is a tool developed by editor Shawn Coyne to analyze stories and provide helpful editorial comments. It's like a CT Scan that takes a photo of the global story and tells the editor or writer what is working, what is not, and what must be done to make what works better and fix what's not. The Story Grid breaks down the component parts of stories to identify the problems. And finding the problems in a story is almost as difficult as the writing of the story itself (maybe even more difficult). The Story Grid is a tool with many applications: 1. It will tell a writer if a Story ?works? or ?doesn't work. 2. It pinpoints story problems but does not emotionally abuse the writer, revealing exactly where a Story (not the person creating the Story'the Story) has failed. 3. It will tell the writer the specific work necessary to fix that Story's problems. 4. It is a tool to re-envision and resuscitate a seemingly irredeemable pile of paper stuck in an attic drawer. 5. It is a tool that can inspire an original creation.
