Assessment and Diagnosis of Personality Disorders SAP Press  
This manual, written with the objective of providing detailed training to both, consultants and users goes deep into the subject from initial configurations to covering the entire Order to Cash and logistics cycle. The integration points of SD-LE with Purchasing/Inventory and Accounting are explained in detail and the chapters marked clearly if it is a Configuration (C) or Transaction (U) or both. Since most of the book has been written in standard SAP, once a company code is set up along with some basic configurations defined in the first few pages, a SAP user, if so desires, can stay only with the areas marked 'U' by passing the 'C' since not everything in standard SAP depends on configurations. Consultants or to-be consultants, of course, need to understand both sides of SAP. The effects of changes done in configuration are immediately followed by their effect on the transactions, thereby making the learning relational in real time for better understanding. From the user's perspective, not much from the subject has been left out in writing this manual and every effort has been taken to keep it relevant to the execution of order processing and logistics functions of day to day working on SAP in an orderly flow. This manual is really a result of many years of training both consultants, and business users. The author appreciates your comments and suggestions on improving this book. If I can be of any assistance in helping you understand the subject better or obtaining access to the system on which it was written for easier understanding, please feel free to drop in a mail to shefariaentinc@gmail.com

SAP ABAP (Advanced Business Application Programming) offers a detailed tutorial on the numerous features of the core programming platform, used for development for the entire SAP software suite. SAP ABAP uses hands on business oriented use cases and a valuable dedicated e-resource to demonstrate the underlying advanced concepts of the OO ABAP environment and the SAP UI. SAP ABAP covers the latest version (NetWeaver 7.3 and SAP application programming release 6.0) of the platform for demonstrating the customization and implementation phases of the SAP software implementation. Void of theoretical treatments and preoccupation with language syntax, SAP ABAP is a comprehensive, practical one stop solution, which demonstrates and conveys the language's commands and features through

hands on examples. The accompanying e-resource is a take off point to the book. SAP ABAP works in tandem with the accompanying e-resource to create an interactive learning environment where the book provides a brief description and an overview of a specified feature/command, showing and discussing the corresponding code. At the reader's option, the user can utilize the accompanying e-resource, where a step-by-step guide to creating and running the feature's object is available. The presentation of the features is scenario oriented, i.e. most of the features are demonstrated in terms of small business scenarios. The e-resource contains the scenario descriptions, screen shots, detailed screen cams and ABAP program source to enable the reader to create all objects related to the scenario and run/execute them. The underlying concepts of a feature/command are conveyed through execution of these hands-on programs. Further exercises to be performed independently by the reader are also proposed. The demonstration/illustration objects including the programs rely on some of the SAP application tables being populated, for example an IDES system which is now a de facto system for all SAP training related activities.
