Example: What is a Custodian Bank? A custodian bank is a special financial institution that carries the responsibility for protecting the financial assets of individuals or companies. These institutions can also be called simply custodians. Such outfits serve as a third party check that protects the assets they are guarding against the fund managers and any illegal activities they may pursue. Congress established these custodian banks with the Investment Company Act of 1940 in order to protect investors. Thanks to this particular legislation, investment companies must adhere to specific stringent listing requirements and must be registered with the Securities and Exchange Commission. The custodian bank performs a number of activities in their primary function of watching over the financial assets of businesses and individuals. They settle sales and purchases of bonds and equities and physically protect the certificates of these assets. These institutions also gather information about and income from such assets. When the assets are stocks this means dividends. When the instruments are bonds, they collect the interest from the coupons. The custodians also disperse information they gather, pertaining to yearly general meetings and shareholder voting. They handle any foreign exchange transfers as necessary and manage all cash transactions. Finally, custodians deliver routine reports on their various activities to the customers. Custodians banks provide reports on every trade or deal which they transact on behalf of the clients. They must be consistently delivered. Along with these reports they furnish information on the companies whose assets they hold besides information on general meetings. When a custodian is holding foreign shares or bonds, they will also have to change currencies as necessary. This is the case when the fund manager buys or sells foreign currency assets. It is also necessary when companies pay out dividends or bonds receive interest with these overseas financial instruments. Custodian banks are a critical component of the modern investment environment. Without them to carry out these functions, all of the important financial record keeping and housekeeping items would be neglected. Not all custodian banks are national operations in the United States. A number of the major international financial institutions offer these services around the globe. Note: This example description is shorted due to publish restrictions. Each term is explained with 600 words and more.

Selected issues of the various non-discrimination concepts Non-discrimination plays an important, if not crucial, role in many areas of law, such as constitutional law, human rights law, world trade law, EU law and tax treaty law. Both direct and indirect taxation are affected by the various types of non-discrimination provisions. From a practical point of view, the non-discrimination provisions within the EU legal framework and the non-discrimination concept under Article 24 of the OECD Model are important examples in this respect. In both areas of non-discrimination law, there are many open issues which have been debated for a long time and have evolved as evergreens of non-discrimination in the area of taxation; examples are the meaning of the ECJ's case law on the "finality" of losses or the compatibility of group regimes with Article 24 of the OECD Model. Other problems have emerged only recently, because of current developments at the OECD level, notably the BEPS project. Therefore, non-discrimination suggested itself as a general topic for the master theses of the full-time LL.M. program in 2014/2015. This book takes up and deals with selected issues in depth. Although the relevant non-discrimination provisions are different in wording and context, often the same issues can be analyzed under both the EU fundamental freedoms and Article 24 of the OECD Model. The results under these non-discrimination provisions may differ. However, similar policy considerations and arguments often influence the final decisions. With this book, the authors and editors contribute to the discussion on selected issues of the various non-discrimination concepts and the challenges they present.

Mandated standards used for vehicle airbags, International Organization for Standards (ISO) standards adopted for photographic film, de facto standards for computer software--however they arise, standards play a fundamental role in the global marketplace. Standards, Conformity Assessment, and Trade provides a comprehensive, up-to-date analysis of the link between standards, product testing and certification, and U.S. economic performance. The book includes recommendations for streamlining standards development, increasing the efficiency of product testing and certification, and promoting the success of U.S. exports in world markets. The volume offers a critical examination of organizations involved in standards and identifies the urgent improvements needed in the U.S. system for conformity assessment, in which adherence to standards is assessed and certified. Among other key issues, the book explores the role of government regulation, laboratory accreditation, and the overlapping of multiple

quality standards in product development and manufacturing. In one of the first treatments of this subject, Standards, Conformity Assessment, and Trade offers a unique and highly valuable analysis of the impact of standards and conformity assessment on global trade.

The WTO dispute settlement process has evolved in recent years into one of the most successful, yet complex, systems of international arbitration. In this extensively revised new edition of Palmetier, Mavroidis, and Meagher's authoritative book on WTO dispute settlement, the authors provide a comprehensive overview of each step of the WTO dispute settlement process, examining both the history of the system, the governing legal rules, and the more informal procedural aspects of the process in detail. This edition takes into account the jurisprudence of panels and the Appellate Body up to the end of 2020 and includes an analysis of the current crisis in the WTO Appellate Body. This volume is an essential tool for practitioners, diplomats, government lawyers, and students of WTO law and should equally be of interest to students of other forms of international arbitration.

The charter of the World Trade Organization (WTO) sets the tone that sustainable trade and economic development dominates multilateral trade negotiation and specific working agreements. This book examines the novel challenge for developing countries to upgrade and optimize their industrial structure and trade composition by stimulating genuinely innovative and competitive industrial strength. The book specifically explores the issue of infant industry promotion under the legal framework of the WTO treaties and case law. Taking the regulatory measures and incentives China has used to build up a large civil aircraft supplier, the book evaluates the key trade agreements relevant to infant industry promotional policies and practices, such as product regulations and standards under the 'Agreement on Technical Barriers to Trade', and export promotion policies under the 'Agreement on Subsidies and Countervailing Measures'. Juan He argues that the regulatory room prescribed by the multilateral trade rules of the WTO does not allow adequate space for developing countries to encourage new and technologically advanced areas of production and trade. The author concludes by suggesting ways in which WTO rules could be modified to help enable developing countries' industrialization. In doing so, the book highlights a need to investigate how localized and international policy trends can be reconciled and enhanced towards the common goal of development. The book will be of great interest to scholars and students of international trade law, Chinese studies, international political economy, and of great use to government agencies responsible for internal trade and industrial policy decisions.

The Oxford Handbook of the Political Economy of International Trade surveys the literature on the politics of international trade and highlights the most exciting recent scholarly developments. The Handbook is focused on work by political scientists that draws extensively on work in economics, but is distinctive in its applications and attention to political features; that is, it takes politics seriously. The Handbook's framework is organized in part along the traditional lines of domestic society-domestic institutions - international interaction, but elaborates this basic framework to showcase the most important new developments in our understanding of the political economy of trade. Within the field of international political economy, international trade has long been and continues to be one of the most vibrant areas of study. Drawing on models of economic interests and integrating them with political models of institutions and society, political scientists have made great strides in understanding the sources of trade policy preferences and outcomes. The 27 chapters in the Handbook include contributions from prominent scholars around the globe, and from multiple theoretical and methodological traditions. The Handbook considers the development of concepts and policies about international trade; the influence of individuals, firms, and societies; the role of domestic and international institutions; and the interaction of trade and other issues, such as monetary policy, environmental challenges, and human rights. Showcasing both established theories and findings and cutting-edge new research, the Handbook is a valuable reference for scholars of political economy.

This book examines the evolution and application of participatory trade politics in West Africa and discusses the theoretical implications for political economy and global governance approaches to trade policy-making. The author traces the involvement of a network of West African global justice Non-Governmental Organizations (NGO), local NGO and movement platforms, and trade unions in the negotiations for an Economic Partnership Agreement with the European Union. Building on this empirical analysis, she develops a theoretical framework of trade policy formation that is not limited to conceptualizing trade as a policy field aimed exclusively at regulating exporting and importing activities in the global economy. Instead, she analyzes how material and ideational spheres interact in the way in which communities set the rules that enable them to trade across long distances. Attempting to reconcile demands for inclusivity with current economic policy-making, the author reframes the way in which we theoretically pose questions of who makes trade policy decisions, through which mechanisms and why trade policy-making practices change, or resist change. Transformations in Trade Politics will be of interest to students and scholars of International Political Economy, Global Governance, Social Movement Studies, International Economic Relations, International Trade Relations, African Politics, The Politics of African/International Development, EU politics and EU-African Relations.
