The Summer of Our Discontent : Hearing Before the Subcommittee on Aviation of the Committee on Transportation and Infrastructure, House of Representatives, One Hundred Sixth Congress, Second Session, September 28, 2000 CRC Press

The U.S. Air Force is grappling with the challenge of aging fleets and when it might be optimal to replace those fleets. This monograph examines commercial aviation data with the goal of drawing

inferences and lessons about aging aircraft that may be relevant to the Air Force. It focuses on "aging effects" - i.e., how commercial aircraft maintenance costs change as aircraft grow older. Although commercial aircraft clearly differ from military aircraft, commercial aviation aging-effect estimates might help the Air Force to project how its maintenance costs will change over time and how those costs might evolve for new commercially analogous aircraft not yet in its inventory. This study found that commercial-airline inflation-adjusted total aircraft maintenance costs, per flight hour, rise substantially as aircraft come off the manufacturer's warranty after a few years of operation, and then rise at about a 3.5 percent annual rate for aircraft six to 12 years old, but are nearly unchanged for aircraft 12 to 25 years old.

When we board a modern twenty-first century aircraft, we are all confident of, hopefully, a smooth flight, and delivery, to our destination of choice. This was not the case of Malaysia Airlines Flight no. MH-370. It never landed at its destination, nor any other airport. This chronology of the facts of its final flight is written to help soothe the nerves of the international flying public. Because MH-370 vanished mysteriously, its story

was written beginning as an unsolved mystery disappearance. Later, when arriving at the conclusion of a tale of a mysteriously missing aircraft, with 239 souls aboard, I realized I had composed a history of the facts and human stories, chronicled within the saga of The Mysterious Final Flight of MH-370. Therefore, the inclusion of the safety of today's human flight is annotated, but also the future of human air flight safety, by describing new safety measures designed to replace outdated twentieth century "black box" invention, with twenty-first century digitized data recording innovative technologies. Cost seems to be the inhibition of installing, then implementing, the now preexisting twenty-first century technologies on all aircraft worldwide, hopefully sooner rather than later. The good news is the United States Air Force has it already implemented and utilized daily today. One day, MH-370 may be located, certainly providing solace and closure for the 239 families missing their loved ones, who comprised the flight manifest of the 239 missing souls aboard MH-370. Plus, both "black boxes" may provide answers to what transpired during "The Mysterious Final Flight of MH-370." Additionally, it is said and felt "Hope springs daily, living eternally."

Master's Thesis from the year 2012 in the subject Communications - Public Relations, Advertising, Marketing, Social Media, University of Žilina, language: English, abstract: The purpose of the thesis is to compare and explain processes related to aircraft sales in aircraft manufacturers´ marketing departments

of large and small aircraft producers in practice and on examples. Due to complexity of marketing processes which are performed by large manufacturers it was decided to dedicate to this processes the practical part of the thesis, and because of that the case study is focused on these processes. The reason for this research is the fact that there are no other theses, literature or materials for students that comprehensively describe and compare processes inside marketing departments. It was decided to study processes used by small and large aircraft manufacturers´ marketing departments. Detailed search of the literature available did not yield desired results in terms of needed information and before it was decided to contact professionals from the aircraft manufacturer marketing field and use personal experience of the author in the subject under study. To be able handle the subject properly and sufficiently it was necessary to use different kinds of information resources and cooperate with senior analysts from the industry. After data gathering and comparison it had been found that there are extraordinary differences between large and small aircraft manufacturers´ marketing departments. The results of this thesis, and comparisons,

should serve as an overall overview of the studied subject and as an information source not only for students of aviation subjects. The conclusions arrived at here can serve as a basis for further research of this wide topic.

On March 8, 2014, Malaysia Airlines Flight 370 loaded 239 people on board and took off for what should have been a six-hour flight. It never made it—and it's still missing. It's been a year since Malaysia Airlines Flight 370 vanished, and there's still no sign of the aircraft, its passengers, or its crew—nor confirmation of what happened or where the aircraft resides. In this gripping investigation of the events that led to the plane's disappearance—and why they could happen again—CNN aviation analyst David Soucie exposes the flaws in the aviation industry, shares what needs to be done so a plane doesn't go missing again, and uses a Bayesian analysis model to reveal what most likely happened on board the plane that led to its downfall. Comprehensive in scope, personal and empathetic in voice, Soucie draws on his thirty years of experience as an accident investigator working with the Federal Aviation Administration. He allows you to put the wild speculation about the plane's disappearance aside and assess the facts

through the eyes of an experienced accident investigator.
