The third edition of *Research Methods for Political Science* retains its effective approach to helping students learn what to research, why to research and how to research. The text integrates both quantitative and qualitative approaches to research in one volume and covers such important topics as research design, specifying research problems, designing questionnaires and writing questions, designing and carrying out qualitative research and analyzing both quantitative and qualitative research data. Heavily illustrated, classroom tested, exceptionally readable and engaging, the text presents statistical methods in a conversational tone to help students surmount "math phobia." Updates to this new edition include: Research topics chapters have been upgraded and expanded. Two mixed methods design chapters have been added. A new chapter on hermeneutic analysis designs and research with large data sets. The chapter on multivariate statistics has been expanded, with an expanded discussion on logistic regression. Tools on how to prepare and present research findings are now featured in the appendix, allowing instructors more flexibility when teaching their courses. *Research Methods for Political Science* will give students the confidence and knowledge they need to understand the methods and basics skills for data collection, presentation and analysis.

*Scattering, Natural Surfaces, and Fractals* provides a comprehensive overview of electromagnetic scattering from natural surfaces, ranging from the classical to the more recent (fractal) approach. As remote sensing applications become increasingly important, this text provides readers with a solid background in interpretation, classification and thematization of microwave images. The "scattering problem is discussed in detail with emphasis on its application to electromagnetic wave propagation, remote sensing, radar detection, and electromagnetic diagnostics. Natural surface and fractals complete this treatise focusing on how the fractal model represents our natural environment and other planets in our solar system, most recently as used to research the planet Venus and Titan, one of the moons of Saturn. An example of how scattering, fractals, and natural surfaces are of great importance is the following: Natural oil slicks in the ocean have been found to be fractal while man-made ones (generated by illegal washing of oil carrying ships) are not. Processing of an ocean image from space may detect the latter by means of a fractal analysis. An elegant and clear treatment of a rigorous topic with informative prose and realistic illustrations of scattering Provides readers with a solid background in interpretation, classification, and thematization of microwave images The only book available on fractal models and their application to scattering

As a teenager Tich Palliser became hooked on this flying game and aspired to take to the skies. The Royal Air Force Volunteer Reserve provided the opportunity and a few months before the Second World War broke out the Yorkshire-born novice was called-up to learn and develop his skills as a combat fighter pilot. In August 1940 the young sergeant aviator, at the controls of a Hawker Hurricane, entered the ferocious aerial melees of the Battle of Britain, fighting for his life, and his colleagues lives, as he became one of Churchills Few in the defense of his homeland. Tich met with some combat success but also witnessed the attrition of war at a personal level, losing many squadron friends. Indeed in December 1940 Tich fell victim to enemy fighters. Tich was commissioned in April 1941 and arrived in Malta a month later to play his part in the defense of the beleaguered island. Steadily his score of combat kills rose. He passed the ace status and early in 1942 was awarded the Distinguished Flying Cross. Soon after he took up instructing duties, and for the remainder of the war, despite the continual threat of sabotage, Tich passed on his hard-won experience to novice pilots in South Africa.

By presenting the conditions, methods and techniques of monetisation of business models in the digital economy, this book combines implementation of the theoretical aspects of monetisation with the presentation of practical business solutions in this field. The scope of the book includes the relationship between the monetisation and scalability degree of business models. The book describes the place and role of the digital business ecosystem in the process of digital transformation. It demonstrates ideological and functional conditions for the use of the concept of sharing to design innovative business models while also presenting a multi-dimensional approach to the use of Big Data and their monetisation in the context of business models. Digital Business Models shows the place and role of ecological and social factors in building digital business models that are part of the concept of the circular economy and presents the contemporary conditions of a sustainability concept that meets the ethical challenges of doing digital business. It demonstrates how important the social factors of business model design and the creation of social value are in modern business and demonstrates. The book explores the servitisation of digital business models using digital technologies and features case studies on the effective solutions of business models that use servitisation as a factor supporting the monetisation of business models. Written for scholars exploring the efficiency and effectiveness of business models related to contemporary concepts - Sharing Economy, Circular Economy, Network Economy, Big Data, so on - and those designing business models taking into account social aspects, it will also be of direct interest to entrepreneurship courses.

**Dialogues with Nathan Gill** UNEP/Earthprint

The term Sustainable Development was brought into common use by the world commission on Environment & Development in its 1987 report Our Common Future . The idea of sustaining the earth has proved a powerful metaphor in raising public awareness and focusing on the need for better environmental stewardship. The Brundtland Commission's definition of the term meeting the needs of the present generation without compromising the needs of future generation -is strongly endorsed by this report. We also believe with the Brundtland Commission, that meeting the needs of the poor in this generation is an essential aspect of sustainably meeting the needs of subsequent generations. There is no difference between the goals of development policy and appropriate environmental protection. Both must be designed to improve welfare.
