European Supreme Courts Cambridge University Press
 In order to protect the built environment in earthquake-prone regions of the world It is important to retrofit and rehabilitate existing structures and infrastructure, as well as to ensure the optimal design and construction of new facilities. The high stakes in human life and property in urban densely populated urban areas has been driving research on advances in this field. These advances are presented biennially at a conference organized by the Wessex Institute of Technology. This book contains the papers from the latest conference in the series, which began in 1991. The papers cover Geographical and geotechnical engineering; Seismic hazard and vulnerability; Seismic isolation and energy dissipation; Structural dynamics; Building performance during earthquakes; Retrofitting; Lifelines; Material mechanics and characterisation; Nonlinear numerical analysis; Performance based design; Experimental studies; Safety and

security; and Innovative technologies.

A New Republic of Letters Springer

HEROM is a peer-reviewed online journal presenting innovative contributions to the study of material culture produced, exchanged, and consumed within the spheres of the Hellenistic kingdoms and the Roman world from the late fourth century BC to the seventh century AD. The journal publishes papers in the full range of the scholarly field and in all relevant academic disciplines within the arts, humanities, social sciences, and environmental sciences. HEROM creates a bridge between material culture specialists and the wider scientific community, with an interest in how humans interacted with and regarded artefacts. For a full table of contents, visit www.herom.be.

The Other Side of the Coin Springer

This volume, the first of a new series, deals with the basic aspects of anaesthesia, intensive care (IC) and pain in neonates and children. Internationally recognised guidelines aimed at standardising the most important procedures, such as the treatment of hypothermia, are also discussed. The book includes

contributions from anesthesiologists from The Hospital for Sick Children, which is affiliated with the University of Toronto and is Canada's most research-intensive hospital.

Mycotoxins in Fruits and Vegetables WIT Press

As in all periods of swift economic development and political upheaval, our era of globalization has brought corruption and conflicts of interest into the spotlight. This comprehensive study highlights the difficulties of devising global legislative an

Functional Food and Human Health Quodlibet

Computer vision is the science and technology of making machines that see. It is concerned with the theory, design and implementation of algorithms that can automatically process visual data to recognize objects, track and recover their shape and spatial layout. The International Computer Vision Summer School - ICVSS was established in 2007 to provide both an objective and clear overview and an in-depth analysis of the state-of-the-art research in Computer Vision. The courses are delivered by world renowned experts in the field, from both academia and industry, and cover both theoretical and practical aspects of real Computer Vision problems. The school is organized every year by University of Cambridge (Computer Vision and Robotics Group) and University of Catania (Image Processing Lab). Different topics are covered each year. A summary of the past Computer Vision Summer Schools can be found at: <http://www.dmi.unict.it/icvss> This edited volume contains a selection of articles covering some of the talks and tutorials held during the last editions of the school. The chapters provide an in-depth overview of challenging areas with key references to the existing literature.

Early Flowers and Angiosperm Evolution BoD – Books on Demand
The success, longevity, and survival of SMEs are deeply linked to the effectiveness of individual decision-making processes, and established firms need to develop an entrepreneurial and innovative decision-making processes to maintain competitive advantages in a continuously changing and increasingly turbulent environment.

Academic Entrepreneurship Edward Elgar Publishing

A Karger 'Publishing Highlights 1890-2015' title Algorithms provide a logical, concise and cost-effective approach to medical reasoning: utilizing a concise, step-by-step approach based upon clues from the history, physical examination and laboratory studies, algorithms help avoid excessive unnecessary procedures and testing. The 2nd, revised edition of Practical Algorithms in Pediatric Endocrinology deals with practical issues of child growth, puberty, diseases of the endocrine glands, sexual differentiation, as well as aberrations of water, electrolyte, mineral and carbohydrate metabolism. Fifty clinical issues are covered by an algorithmic approach, breaking down long lists and tables of differential diagnosis into smaller, more manageable ones. Common clinical symptoms, signs and laboratory abnormalities are classified as they present themselves at the patient's bedside. This book is aimed at general practitioners and pediatricians, in particular those who are not exposed to pediatric endocrine problems on a daily basis, and at trainees in endocrinology and pediatric endocrinology as they acquire familiarity with clinical problem solving to make rational choices when facing clinical dilemmas.

Advanced Materials for the Conservation of Stone Cambridge University Press

This book features a selection of the best papers presented at two SIEV seminars held in Venice, Italy, in September 2017 and 2018, in the context of the Urbanpromo Green events. Bringing together experts from a diverse range of fields – economics, appraisal, architecture, energy, urban planning, sociology, and the decision sciences – and government representatives, the seminars encouraged reflections on the role of future cities in terms of sustainable development, with a particular focus on

improving collective and individual well-being. The book provides a multidisciplinary approach to contemporary green urban agendas and urban sustainability, and addresses the demand for policies and strategies to strengthen resilience through concrete measures to reduce energy consumption, mitigate pollution, promote social inclusion and create urban identity.

Lower Urinary Tract Symptoms and Benign Prostatic Hyperplasia Springer

This is the first book to analyse the food industry from a Marxist perspective. Respected economist Robert Albritton argues that the capitalist system, far from delivering on the promise of cheap, nutritious food for all, has created a world where 25% of the world population are over-fed and 25% are hungry. This malnourishment of 50% of the world's population is explained systematically, a refreshing change from accounts that focus on cultural factors and individual greed. Albritton details the economic relations and connections that have put us in a situation of simultaneous oversupply and undersupply of food. This explosive book provides yet more evidence that the human cost of capitalism is much bigger than those in power will admit.

Herom Nova Science Publishers

In recent years, the topic of environmental responsibility has been affecting policymakers and markets, and it has become a relevant issue in the multidisciplinary discussion between scientists and practitioners. Most countries have adopted new regulations and economic instruments to support environmental sustainability; at the same time, many organisations have adopted environmental policies and management tools such as

the Environmental Management System (EMS). This book reviews the past, present and future of environmental management. It combines a review of differential game models of the ecological-economic systems and respective analytical techniques with original results in game theoretic modelling of the sustainable environmental management; summarises the results derived from four surveys conducted in Italy from 2008 to 2015, that involved the Italian ISO 14001 certified organisations in exploring their interest on the adoption of other environmental tools and labels; presents a holistic framework for analysing, assessing and improvement of environmental management in agriculture, and assesses the forms, factors and efficiency of agro-eco-management in Bulgaria during post-communist transition, European integration, and EU CAP implementation; and finally, presents key environmental and climate change challenges and opportunities in the Balkan Peninsula and in relation to alignment to the European Union (EU).

Ruolo di anzianità della magistratura Oxford University Press
Global health and the increasing incidence of various diseases are a cause for concern, and doctors and scientists reason that the diet, food habits and lifestyle are contributing factors. Processed food has reduced the nutritional value of our diet, and although supplementing foods with various additives is considered an alternative, the long-term impact of this is not known. Many laboratories around the world are working to identify various nutritional components in our daily food and their effect on human health. These have been classified as Nutraceuticals or functional food, and they may have preventive and therapeutic effects in a number of pathologies associated

with modern dietary habits and lifestyles. This book addresses various aspects of this issue, revitalizing the discussion and consolidating the latest research on nutritional and functional food and their effects in in-vitro, in-vivo and human clinical studies.

Machine Learning for Computer Vision Karger Medical and Scientific Publishers

Einleitung Achim Walter und Michael Auer Unternehmerische Chancen jenseits der Trends erkennen und nutzen Notwendigkeit des Unternehmertums in der Forschung Allgemein werden in der Literatur unter dem Thema "Academic Entrepreneurship" Aktivitäten, Personen, Programme und Organisationen betrachtet, die der wirtschaftlichen Verwertung von wissenschaftlichen Erkenntnissen dienen. Im vorliegenden Buch geht es hierbei vornehmlich um die Frage, wie und unter welchen Bedingungen aus Forschungsergebnissen in Form "roher" Technologien wertschaffende Unternehmen entstehen. Angesichts drohender Wohlstandsverluste wird dieses Thema von Vertretern der Wirtschaft, Wissenschaft und Politik gerade in klassischen Industrienationen zunehmend diskutiert. Im Zuge der Globalisierung von Wertschöpfungsketten hat in diesen Ländern der Druck, innovationsfähige Unternehmen hervorbringen, besonders zugenommen. Die gute Nachricht lautet: Aus Universitäten und anderen öffentlichen Forschungseinrichtungen lassen sich Unternehmen ausgründen, die in Industrienationen Wachstum fördern und Wohlstand sichern können. Deren Bedeutung für die Entwicklung von Spitzentechnologien für Hightech-Produkte wird voraussichtlich weiter steigen. So genannte akademische Spin-offs sind wirtschaftlich selbständige

Organisationen, die unter Beteiligung von Wissenschaftlern aus öffentlichen Forschungseinrichtungen mit dem Ziel der wirtschaftlichen Verwertung dort entstandener Technologien - gründet wurden. Diese Unternehmen sind für uns unter mehreren Gesichtspunkten hochinteressant.

Research Handbook on Global Administrative Law Springer Long a major element of classical studies, the examination of the laws of the ancient Romans has gained momentum in recent years as interdisciplinary work in legal studies has spread. Two resulting issues have arisen, on one hand concerning Roman laws as intellectual achievements and historical artifacts, and on the other about how we should consequently conceptualize Roman law. Drawn from a conference convened by the volume's editor at the American Academy in Rome addressing these concerns and others, this volume investigates in detail the Roman law of obligations—a subset of private law—together with its subordinate fields, contracts and delicts (torts). A centuries-old and highly influential discipline, Roman law has traditionally been studied in the context of law schools, rather than humanities faculties. This book opens a window on that world. Roman law, despite intense interest in the United States and elsewhere in the English-speaking world, remains largely a continental European enterprise in terms of scholarly publications and access to such publications. This volume offers a collection of specialist essays by leading scholars Nikolaus Benke, Cosimo Cascione, Maria Floriana Cursi, Paul du Plessis, Roberto Fiori, Dennis Kehoe, Carla Masi Doria, Ernest Metzger, Federico Procchi, J. Michael Rainer, Salvo Randazzo, and Bernard Stolte, many of whom have not published before in English, as well as opening and concluding

chapters by editor Thomas A. J. McGinn.

The Palaeozoic Herom

Developments in Petrology, 6: Trondhjemites, Dacites, and Related Rocks focuses on the geology, geochemistry, and petrology of several kinds of trondhjemites, dacites, and genetically related rocks. The selection first elaborates on the definition, environment, and hypotheses of origin of trondhjemite; a review of the mineralogy and chemistry of tertiary-recent dacitic, latitic, rhyolitic, and related salic volcanic rocks; and some trace elements in trondhjemites and their implications to magma genesis and paleotectonic setting. Discussions focus on tectonic environments and trace element patterns, selection and reliability of trace elements, interrelationships between mineralogy and chemistry, and regional variations of dacitic and rhyolitic magmas. The publication then tackles strontium isotope geochemistry of late Archean to late Cretaceous tonalites and trondhjemites; Archean gray gneisses and the origin of the continental crust in West Greenland; and metamorphic development of early Archean tonalitic and trondhjemitic gneisses in Saglek Area, Labrador. The book examines the petrology, geochemistry, and origin of the Sparta quartz dioritetrondhjemite complex; reconnaissance geochemistry of Devonian island-arc volcanic and intrusive rocks in West Shasta District, California; and origin of the Twillingate trondhjemite in North-Central Newfoundland. The selection is highly recommended for geologists and geochemists wanting to explore trondhjemites, dacites, and genetically related rocks.

Corruption and Conflicts of Interest University of Michigan Press Ocean closure involves a variety of converging tectonic processes

that reshape shrinking basins, their adjacent margins and the entire earth underneath. Following continental breakup, margin formation and sediment accumulation, tectonics normally relaxes and the margins become passive for millions of years. However, when final convergence is at the gate, the passive days of any ocean and its margins are over or soon will be. The fate of the Mediterranean and Persian Gulf is seemingly known beforehand, as they are nestled in the midst of Africa-Arabia plate convergence with Eurasia. Over millions of years through the Cenozoic era they progressively shrank, leaving only a glimpse of the Tethys Ocean. Eventually, the basins will adhere to the Alpine-Himalaya orogen and dissipate. This book focuses on a unique stage in the ocean closure process, when significant convergence already induced major deformations, yet the inter-plate basins and margins still record the geological history.

Registration and Recognition in Images and Videos Springer

This Handbook explores the main themes and topics of the emerging field of Global Administrative Law with contributions by leading scholars and experts from universities and organizations around the world. The variety of the subjects addressed and the internationality of the Handbook's perspectives make for a truly global and multi-dimensional view of the field. The book first examines the growth of global administrations, their interactions within global networks, the emergence of a global administrative process, and the development of the rule of law and democratic principles at a global level. It goes on to illustrate the relationship between global law and other legal orders, with particular attention to regional systems and national orders. The final section, devoted to the emergence of a global legal culture,

brings the book full circle by identifying the growth of a global epistemic community. The Research Handbook on Global Administrative Law provides a contemporary overview of the nascent field in detailed yet accessible terms, making it a valuable book for university courses. Academics and scholars with an interest in international law, administrative law, public law, and comparative law will find value in this book, as well as legal professionals involved with international and supranational organizations and national civil servants dealing with supranational organizations.

Discipline Filosofiche (2008-1) Edward Elgar Publishing
Hardbound. This first volume in The Phanerozoic Geology of the World series devoted to the Palaeozoic is an assemblage of contributions dealing mainly with fragments of the former Gondwana. Data is included which is not readily available elsewhere. Each chapter contains a comprehensive bibliography to serve as a resource base for more detailed study.

Basics Emerald Group Publishing

The recent discovery of diverse fossil flowers and floral organs in Cretaceous strata has revealed astonishing details about the structural and systematic diversity of early angiosperms. Exploring the rich fossil record that has accumulated over the last three decades, this is a unique study of the evolutionary history of flowering plants from their earliest phases in obscurity to their dominance in modern vegetation. The discussion provides comprehensive biological and geological background information, before moving on to summarise the fossil record in detail. Including previously unpublished results based on research into Early and Late Cretaceous fossil floras from Europe and North

America, the authors draw on direct palaeontological evidence of the pattern of angiosperm evolution through time. Synthesising palaeobotanical data with information from living plants, this unique book explores the latest research in the field, highlighting connections with phylogenetic systematics, structure and the biology of extant angiosperms.

Obligations in Roman Law Pluto Press

Global Administrative Law has recently emerged as one of the most important contemporary fields in public law scholarship. Concerned with developing fuller understandings of patterns in global governance, it represents one of the most insightful ways of viewing the multifarious forms of public power that now exist

beyond the State. The present collection brings together some of the leading scholars working in the field of global administrative law to address past and future challenges related to global governance. Each of the contributions picks up on the more general theme of the values that do or should inform global administrative law, and the book in this way provides a novel and thought-provoking commentary on this most engaging area of debate. Values in Global Administrative Law will be of interest to public lawyers, social and political scientists and scholars of international relations. It will also be an invaluable resource for undergraduate and postgraduate courses that touch partly or exclusively on the challenges of global governance.
