Our Mother Ocean tells

the story of the Global  
Fishermen's Movement  
from its beginnings in  
Southern India to its  
crucial role in the global  
movement against  
neoliberal capitalism. In a  
time of profound  
economic and ecological

crisis, Mariarosa Dalla  
Costa and Monica Chilese  
offer a long-overdue  
reminder that the ocean is  
an integral terrain of  
struggle for the  
preservation of dignity  
and life. The authors draw  
attention to the

polyvalent functions of the ocean as a source of food, medicine, raw materials, biodiversity and culture; and also as a site of human labour, livelihood, and culture threatened by industrial fishing and tourism that distorts landscapes, depletes fish stocks, and destroys natural barriers for the protection against climate disaster. Their perspective is both practical and theoretical, exploring the related issues of globalization, development, work, and food, and illuminates

strategic connections between those struggling for social justice in the global North and South. For humanity and against capital, Dalla Costa and Chilesse remind us, it is time for love and respect for our mother Ocean. Primary Documents Palgrave Macmillan This book, translated from Italian, discusses the influence of Galileo on Hobbes' natural philosophy. In his *De motu, loco et tempore* or *Anti-White* (~ 1643), Thomas Hobbes describes Galileo as "the greatest

philosopher of all times", and in *De Corpore* (1655), the Italian scientist is presented as the one who "opened the door of all physics, that is, the nature of motion." The book gives a detailed analysis of Galileo's legacy in Hobbes's philosophy, exploring four main issues: a comparison between Hobbes' and Mersenne's natural philosophies, the Galilean Principles of Hobbes' philosophical system, a comparison between Galileo's momentum and Hobbes's *conatus*, and

Hobbes' and Galileo's theories of matter. The book also analyses the role played by Marin Mersenne, in spreading Galileo's ideas in France, and as a discussant of Hobbes. It highlights the many aspects of Hobbes' relationship with Galileo: the methodological and epistemological elements, but also the conceptual and the lexical analogies in the field of physics, to arrive, finally, at a close comparison on the subject of the matter. From this analysis emerges a shared mechanical

conception of the universe open and infinite, that replaces the Aristotelian cosmos, and which is populated by two elements only: matter and motion.

Georges Perec, novelist, filmmaker and essayist, was one of the most inventive and original writers of the twentieth century. A fascinating aspect of his work is its intrinsically geographical nature. With major projects on space and place, Perec's writing

speaks to a variety of geographical, urban and architectural concerns, both in a substantive way, including a focus on cities, streets, homes and apartments, and in a methodological way, experimenting with methods of urban exploration and observation, classification, enumeration and taxonomy.

This text presents documents drawn from the artistic archives of Eastern and Central

Europe during the second half of the 20th century. Collection of Essays by Legal Advisers of States, Legal Advisers of International Organizations and Practitioners in the Field of International Law McGill-Queen's Press - MQUP

For several decades David Bethea has written authoritatively on the “mythopoetic thinking” that lies at the heart of classical Russian literature, especially Russian poetry. His theoretically informed

essays and books have made a point of turning back to issues of intentionality and biography at a time when authorial agency seems under threat of erasure and the question of how writers, and poets in particular, live their lives through their art is increasingly moot. Pushkin's Evgeny can be one incarnation of the poet himself and an everyman rising up to challenge Peter's new world order; Brodsky can be, all at once, Dante and Mandelstam and himself,

the exile paying an Orphic visit to Florence (and, by ghostly association, Leningrad). This collection contains a liberal sampling of Bethea's most memorable previously published essays along with new studies.

**Mad Cows and Mother's Milk, Second Edition** Springer Nature Storming Heave in Steve Wright's unsurpassed study of Italian autonomist Marxism. This new edition remains the only book to examine Italian workerist theory and practice, from its

origins in the anti-Stalinist left of the 1950s to its heyday twenty years later. First developed by Antonio Negri, Mario Tronti, Sergio Bologna and others, workerism, or 'operaismo', includes the refusal of work, class self-organisation, mass illegality and the extension of revolutionary agency, all of which are still practised today by workers across the world. This edition includes a new chapter looking at the debates around operaismo and Autonomia since the book originally

appeared in 2002. The Ideal Element in Law Springer Science & Business Media  
The Renault 5, now at the end of its life, achieved, like the Mini, a huge cult status. In this book the car's history is chronicled from the original machines through many of the more exotic versions to the latest models. *States of Emergency* Palgrave Macmillan  
The first case study deals with the mad cow fiasco of 1996, one of the most expensive and tragic

examples of poor risk management in the last twenty-five years. For ten years the British government failed to acknowledge the possibility of a link between mad cow disease and Creutzfeldt-Jakob disease, the human equivalent, until increased scientific evidence and public pressure forced them to take action, resulting in the slaughter of more than one million cattle. The second study looks at what is commonly known as hamburger disease, caused by a

virulent form of the E. coli bacterium, which has struck thousands and killed over thirty people in the last few years. Despite its widespread effects, it is unclear whether scientific knowledge on preventing the disease is reaching the public. Other case studies include the use of a genetically engineered hormone to increase milk production in cows, health risks associated with silicone breast implants, public controversies surrounding dioxins and PCBs, and the introduction

of agricultural biotechnology. These case studies show that institutions routinely fail to communicate the scientific basis of various high-profile risks. These failures to inform the public make it difficult for governments, industry, and society to manage risk controversies sensibly and often result in massive costs. With its detailed analyses of specific risk management controversies, *Mad Cows and Mother's Milk* will help us avoid future mistakes.

Architecture and the Novel under the Italian Fascist Regime discusses the relationship between the novel and architecture during the Fascist period in Italy (1922-1943). By looking at two profoundly diverse aesthetic phenomena within the context of the creation of a Fascist State art, Billiani and Pennacchietti argue that an effort of construction, or reconstruction, was the main driving force behind both projects: the advocated "revolution" of

the novel form (realism) and that of architecture (rationalism). The book is divided into seven chapters, which in turn analyze the interconnections between the novel and architecture in theory and in practice. The first six chapters cover debates on State art, on the novel and on architecture, as well as their historical development and their unfolding in key journals of the period. The last chapter offers a detailed analysis of some important novels and

buildings, which have in practice realized some of the key principles articulated in the theoretical disputes. Architecture and the Novel under the Italian Fascist Regime Haynes Service and Repair Manuals  
The world has changed radically since 1989, when the General Assembly declared the period from 1990 to 1999 as the United Nations Decade of International Law. During that time, the international community claimed some major

achievements as reflected by the adoption of conventions and treaties. This publication presents a collection of essays from legal advisers of States and international organizations, all of whom are among those committed to promoting respect for international law. Their contribution provides a practical perspective on international law, viewed from the standpoint of those involved in its formation, application and administration.

The automobile sector is one of the most archetypal global industries and is seen by many as one of the main drivers behind the homogenisation of world markets due to firms' internationalization strategies and the social practices that firms impose. This book argues that this is not entirely the case due to the heterogeneity of firms and the diversity of strategies pursued. It highlights the diversity

and forms of internationalization and the preference for regionalization rather than globalization that has occurred over the past decade. This book looks specifically at the American and Asian car industry.

The Jamaican writer and cultural theorist Sylvia Wynter is best known for her diverse writings that pull together insights from theories in history, literature, science, and

black studies, to explore race, the legacy of colonialism, and representations of humanness. Sylvia Wynter: *On Being Human as Praxis* is a critical genealogy of Wynter's work, highlighting her insights on how race, location, and time together inform what it means to be human. The contributors explore Wynter's stunning reconceptualization of the human in relation to concepts of blackness, modernity, urban space, the Caribbean, science

studies, migratory politics, and the interconnectedness of creative and theoretical resistances. The collection includes an extensive conversation between Sylvia Wynter and Katherine McKittrick that delineates Wynter's engagement with writers such as Frantz Fanon, W. E. B. DuBois, and Aimé Césaire, among others; the interview also reveals the ever-extending range and power of Wynter's intellectual project, and elucidates her attempts to rehistoricize humanness

as praxis. *Sephardim in the Americas* Pluto Press (UK) A crucial question throughout the Middle Ages, the relationship between body and spirit cannot be understood without an interdisciplinary approach - combining literature, philosophy and medicine. Gathering contributions by leading international scholars from these disciplines, the collected volume explores themes such as lovesickness, the five senses, the role of memory and passions, in

order to shed new light on the complex nature of the medieval Self.

Capital Springer Nature A History of Architectural Conservation expands knowledge about the conservation of ancient monuments, works of art and historic buildings. It includes the origins of the interest in conservation within the European context, and the development of the concepts from Antiquity and the Renaissance to the present day. Jokilehto illustrates how this development has

influenced international collaboration in the protection and conservation of cultural heritage, and how it has formed the principal concepts and approach to conservation and restoration in today's multi-cultural society. This book is based on archival research of original documents and the study of key restoration examples in countries that have influenced the international conservation movement. Accessible and of great interest to students and the general

public it includes conservation trends in Europe, the USA, India, Iran and Japan.

The studies collected in this volume deal with the interpretation of opera. In most cases the results are based on structural analysis, a concept which may require some clarification in this context. During the past decade 'structure' and 'structural' have become particularly fashionable

terms lacking exact denotation and used for the most divergent purposes. As employed here, structural analysis is concerned with such concepts as 'relationship', 'coherence' and 'continuity', more or less in contrast to formal analysis which deals with measurable material. In other words, I have analysed the structure of an opera by seeking and examining factors in the musico-dramatic process, whereas analysts of form are generally preoccupied with the study of

elements contained in the musical object. Though admittedly artificial, the dichotomy of form and structure may elucidate the present situation with regard to the study of opera. Today, nearly one hundred years after the death of Wagner, the proclaimed anti thesis of Oper und Drama is generally taken for what it really was: a means to propagate the philosophy of its inventor. The conception of opera (whether 'continuous' or composed of 'numbers') as a special form of

drama is no longer contested. Nevertheless musical scholarship has failed to draw the consequences from this view and few scholars realize the need to study general theory of drama and more specifically the dramatic experience. *Georges Perec's Geographies* University of Pittsburgh Press  
Roscoe Pound, former dean of Harvard Law School, delivered a series of lectures at the University of Calcutta in 1948. In these lectures, he criticized virtually

every modern mode of interpreting the law because he believed the administration of justice had lost its grounding and recourse to enduring ideals. Now published in the U.S. for the first time, Pound's lectures are collected in Liberty Fund's *The Ideal Element in Law*, Pound's most important contribution to the relationship between law and liberty. *The Ideal Element in Law* was a radical book for its time and is just as meaningful today as when Pound's lectures were first

delivered. Pound's view of the welfare state as a means of expanding government power over the individual speaks to the front-page issues of the new millennium as clearly as it did to America in the mid-twentieth century. Pound argues that the theme of justice grounded in enduring ideals is critical for America. He views American courts as relying on sociological theories, political ends, or other objectives, and in so doing, divorcing the practice of law from the

rule of law and the rule of law from the enduring ideal of law itself. Roscoe Pound is universally recognized as one of the most important legal minds of the early twentieth century. Considered by many to be the dean of American jurisprudence, Pound was a former Justice of the Supreme Court of Nebraska and served as dean of Harvard Law School from 1916 to 1936. With the growing literature on the subject of punitive damages, the consensus is that it seems worthwhile and even necessary to discuss, thoroughly and on a comparative basis, the nature, role and suitability of such damages in tort law and private law in general. This book contains reports from selected jurisdictions that explicitly allow the award of punitive damages as

well as from jurisdictions which purport (sometimes emphatically) to deny their existence (although a number covertly incorporate such damages into the framework of their tort systems). It benefits from an economic analysis of punitive damages, a report from a private international law perspective, one on their insurability and one on aggravated damages. The book's comparative report and conclusion critically evaluates the material in the above reports and

advances a thorough analysis of the nature of punitive damages, the cases for and against them, and their suitability in the field of tort law. Alternative remedies in private and criminal law are also considered. The publication will appeal to students, academics, practitioners, judges, policy makers and those in the insurance industry. Our Mother Ocean Walter de Gruyter GmbH & Co KG This new book provides a cross-country comparative analysis of the key issues shaping

the latest pension reforms in Europe: political games, welfare models and pathways, population reactions, and observed and expected outcomes. Pension reform has been a top policy priority for European governments in the last decade. Ageing populations, changing labour market patterns and the process of European integration are the 'irresistible forces' pushing for reform throughout the region. The Political Economy of Pension Reform evaluates the political forces that

make pension reform viable in different national and institutional contexts and the nature of political bargains, actors and cleavages surrounding policy change. The volume also examines the nature and outcomes of pension reform experiences in Europe, searching for a solution to the financial challenge posed by growing pension budgets. By addressing the nature of change, the pathways of reform, and

the outcomes of the new pension mix in the region, the authors conclude with an analysis of people's perceptions and attitudes towards pension policy and their acceptance or otherwise of different reform options. This book will be of interest to students and scholars of international political economy, European politics, and social policy. Storming Heaven UCL Press
