*Digital Collage and Painting* Amer Society of Mechanical Medieval Manuscripts in the Digital Age explores one major manuscript repository's digital presence and poses timely questions about studying books from a temporal and spatial distance via the online environment. Through contributions from a large group of distinguished international scholars, the volume assesses the impact of being able to access and interpret these early manuscripts in new ways. The focus on Parker on the Web, a world-class digital repository of diverse medieval manuscripts, comes as that site made its contents Open Access. Exploring the uses of digital representations of medieval texts and their contexts, contributors consider manuscripts from multiple perspectives including production, materiality, and reception. In addition, the volume explicates new interdisciplinary frameworks of analysis for the study of the relationship between texts and their physical contexts, while centring on an appreciation of the opportunities and challenges effected by the digital representation of a tangible object. Approaches extend from the codicological, palaeographical, linguistic, and cultural to considerations of reader reception, image production, and the implications of new technologies for future discoveries. *Medieval Manuscripts in the Digital Age* advances the debate in manuscript studies about the role of digital and computational sources and tools. The idea of holding this workshop on "The Jllilky Way" arose at the conference dinner of a meeting on "Regions of Recent Star Formation" held at Penticton in June 1981. Leo Blitz (now at the University of Maryland) and I decided that there was a need, and agreed that we would organize one in Vancouver in the Spring of 1982. The purpose of the workshop was to have an intensive exchange of ideas between some of the most active workers in the field regarding the recent work which has been significantly changing our concepts of the Milky Way. To achieve this we limited the number of participants, and planned the program so that there was ample time for discussion. The meeting appeared to work very well, both scientifically and socially, and this volume contains 50 of the 55 papers that were The discussion was very lengthy, but since the papers were presented. written up after the meeting many of the points raised have been in the publications, and it seems pointless to reproduce it incorporated here. Leo and I would like to thank the many people who helped to make the meeting a success: at UBC and Frank J. Kerr (Provost of MPSE C.V. Finnegan (Dean of Science at the University of Maryland) who welcomed the participants on behalf of the sponsoring Universities. Bart Bok who opened the scientific proceedings, and Maarten Schmidt who gave the closing summary.

Flash MX Studio takes your raw Flash talent and multiplies its potency by focusing it on real-world web design situations. In the heady days of the late 1990s, designers were trying their hand at anything and everything they could lay their hands on. Now the marketplace is seriously focused, and serious Flash designers have to know exactly what they're doing and why. These days, it's all about functionality over experimentation, justification over

style. It's all about maturity. The design must fit the job specs, and this book shows the reader how to fulfill these requirements and more. This book examines all the avenues open to professional or aspiring professional Flash MX designers. It takes a look at advanced uses of the new MX features, such as components and the Drawing API, and gives guidance on building whole new structures for animation, Dynamic Content, PHP, ColdFusion MX, XML, video, audio and audiovisual formats. Never before has so much power been so accessible to the web designer. This book is designed to put that power in your hands. Flash MX Studio has been broken into four sections to address the most common needs for the Flash designer. First off, Jamie McDonald provides five chapters on site presentation and the principles of web design. These opening chapters take a look at how to create slick, professional-level sites, involving Flash MX's new drawing and motion capabilities and interactive techniques. The second section concentrates on ActionScript. Flash's resident coding environment is crucial to master, and taps into Flash's great strength—intuitive and interactive applications. Keith Peters and Todd Yard have buddied up on this section, and examine some of the most advanced ActionScript techniques around. Be warned—this section is not for the faint-hearted! Section three takes a look at Flash MX's greatly improved visual, audio and audiovisual capabilities. Its three chapters, written by Jez Turner and Alex White, concentrate on building a single site aimed at displaying rich media content. The final section is devoted to expounding a few myths about dynamic content using Flash. Its four chapters talk about general practice, before focusing in on specific areas, including introductions to PHP and XML, together with a look at Macromedia's brand new ColdFusion MX.

In measuring a dissolved substance, a concentration of a specific dissolved substance in a sample water is measured using a measuring water W1 developing a specific color within a specific pH range by adding each of two reagents to a sample water W0, and an acid-base indicator S developing different colors other than the specific color is selected in a first pH range including the specific pH range and a second pH range deviating from the first pH range. Next, a reagent is prepared by adding the acid-base

indicator to one reagent wherein a pH value of a reagent added water where the two kinds of reagents are separately added to the sample water is within the second pH range. Next, absorbance values are calculated by three region component lights which are a transmitted light in the measuring water wherein the prepared reagent is added.

I walked out into the autumn morning and smelt a bonfire behind the exhaust fumes. I only had to cross the road to walk into the tall glass cube that would be my art school for the next three years. Evie has left her father, her life in Cornwall and her childhood behind her to begin a very different sort of life in London. At first the great city provides her with a world of inspiration. Her imagination is fired by the history, and the scenes of London. With Rob, Bianca and 'the ballerina', Evie discovers the ancient and ever-changing city and her paintings are filled with colour and fantasy as she indulges her need to escape. This new life seems safe and peaceful until the moment her alcoholic father arrives and spins this new world around so that the past is again her present. Evie struggles to carry on with the life she has been building but her fears and memories are never far away. The dreams and the nightmares come together on the canvas of Evie's young life and it is her new friends, the city she has fallen in love with, and most of all, her growing friendship with a talented young sculptor, that must hold her together. This is the story of a daughter, an artist and the moment when you realise your life is your own. Helena McEwen draws together the themes of art, love, friendship and memory with a painter's skill, in a story filled with hope.
