This bilingual publication results from a four-day symposium aimed at capturing the general directions and analytical issues that characterize approaches to sustainable use in Africa. The papers included in this work are organized under four major headings: modes of use, devolution, scale issues and external issues. Authors explore these themes through the use of case studies and the description of specific regional experiences. External issues are further explored in a series of commissioned policy papers which have also been included.

Canons of Ethics Aspatore Books

Among members of the legal profession and judiciary throughout the world, there is a genuine concern with establishing and maintaining high ethical standards. It is not difficult to understand why this should be so. Nor is it difficult to see the

professional standards are not completely divorced from ordinary morality. Indeed, legal ethics and professional responsibility are more than a set of rules of good conduct; they are also a commitment to honesty, integrity, and service in the practice of law. In order to ensure that the standards established are the right ones, it is necessary first of all to examine important philosophical and policy issues, such as the need to reconsider the boundaries between, on the one hand, a lawyer's obligation to a client and, on the other, the public interest. It is also to be appreciated that conflicts of interest are pervasive and that all too often they are so common that they are not recognized as such. Yet rarely is public policy clearly cut. The underlying themes of this book are: * that the move to more definite rules is not only inevitable but also desirable * that existing codes of professional practice cannot simply be treated as a system of specific rules * that the current set of ethical rules is contestable and requires further refinement, perhaps even radical surgery * and that legal ethics must be conceived in the more general area of

professional responsibility The wider ethical issues of the operation of the legal profession as a whole are now firmly on the agenda. Both law schools and law professionals have a role to play in developing acceptable standards in this area and it is therefore appropriate that the essays in this volume are written by a distinguished group of law teachers and practitioners together with senior members of the judiciary. The book opens with an overview chapter, followed by three chapters analysing the ethical rules pertaining to the judiciary, the Bar, and solicitors, written by, respectively, the Master of the Rolls, Anthony Thornton, and Alison Crawley and Christopher Bramall. The following three chapters look at the specific issues of confidentiality (Michael Brindle and Guy Dehn) and the particular ethical problems in the family and criminal law jurisdictions (Sir Alan Ward and Professor Andrew Ashworth respectively). Chapter 8, by Sir Alan Paterson, discusses the teaching of legal ethics, whilst Chapters 9 and 10, by Marc Galanter, Thomas Palay, and Cyril Glasser put the subject in its wider social and professional context. The book finishes with a chapter which examines what lawyers may learn from looking at the study of medical ethics.

The way the nation manages pests is changing because of efforts to reduce the reliance on conventional pesticides. Driving this change is strong public opinion coupled with action by Congress and by federal and state agencies. At the same time, pest control needs are rising. Many important pests are now resistant to formerly effective chemical controls. And new pests continue to enter the country or spread to new locations where they threaten agriculture, native ecosystems, or human health. The farmers, foresters, ranchers, and others who seek to prevent excessive pest damage are increasingly aware of the shortcomings of conventional pest control approaches.

It is a well-known claim today that pressure on companies to become more responsible is increasing. However, is this based on fact or is merely wishful-thinking? The evidence obtained across nine stakeholder groups in Europe is sobering indeed in the context of globalization and the constant striving for competitiveness. This book provides an honest and in-depth analysis of how stakeholders themselves assess and influence corporate sustainability. It is an eye-opener, both for companies and for the stakeholders.

Integrated River Basin Development Palgrave Macmillan

For years many citizens have complained that our national government is fettered by legions of inefficient, unaccountable, feather-nesting lawyers. These critics might be right about the numbers—there are nearly 40,000 lawyers employed by the federal government in every branch and at every level. But most of these professionals fulfill functions that are essential to or extremely valuable in running the machinery of government. In this volume, Cornell Clayton and eight other authorities on public law and legal agencies explore the role that politics play in this federal legal bureaucracy—especially within the executive branch. They provide insights into the historical development, present status, future trends, and interrelations among the offices of the Attorney General, Solicitor General, Special Prosecutor, White House Legal Counsel, Office of Legal Counsel, and counsels in regulatory agencies like the EPA and the EEOC.

All the essays highlight a common theme—the perpetual tensions and conflicts between executive-branch politics and the profession's principled independence. Readable and enlightening, these essays add much to our understanding of—and remove some of the tarnish from—this elite corps of legal experts. They should benefit anyone interested in the legal profession, presidential politics, administrative law, public policy, and bureaucratic politics in our nation's capital.

Business Strategy and Sustainability

Traditional separation of powers theories assumed that governmental despotism will be prevented by dividing the branches of government which will check one another. Modern governments function with unexpected complicity among these branches. Sometimes one of the branches becomes overwhelming. Other governmental structures, however, tend to

mitigate these tendencies to domination. Among other structures courts have achieved considerable autonomy vis-à-vis the traditional political branches of power. They tend to maintain considerable distance from political parties in the name of professionalism and expertise. The conditions and criteria of independence are not clear, and even less clear are the conditions of institutional integrity. Independence (including depolitization) of public institutions is of particular practical relevance in the post-Communist countries where political partisanship penetrated institutions under the single party system. Institutional integrity, particularly in the context of

administration of justice, became a precondition for accession to the European Union. Given this practical challenge the present volume is centered around three key areas of institutional integrity, primarily within the administration of justice: First, in a broader theoretical-interdisciplinary context the criteria of institutional independence are discussed. The second major issue is the relation of neutralized institutions to branches of government with reference to accountability. Thirdly, comparative experience regarding judicial independence is discussed to determine techniques to enhance integrity.
