Accelerated partial breast irradiation (APBI) is being rapidly introduced into the clinical management of early breast cancer. APBI, in fact, encompasses a number of different techniques and approaches that include brachytherapy, intraoperative, and external beam techniques. There is currently no single source that describes these techniques and their clinical implementation. This text is a concise handbook designed to assist the clinician in the implementation of APBI. This includes a review of the principles that underlie APBI, a practical and detailed description of each technique for APBI, a review of current clinical results of APBI, and a review of the incidence and management of treatment related complications.

Surgery: A Case Based Clinical Review has proven to be the premiere resource to help prepare medical students for the surgical shelf exam and clinical wards. The second edition was conceived after listening to the feedback we received from students. We have added several new chapters and updated the others. This book continues to provide the reader with a comprehensive understanding of surgical diseases in one easy-to-use reference that combines multiple teaching formats. The book begins using a case based approach. The cases presented cover the diseases most commonly encountered on a surgical rotation. The cases are followed by a series of short questions and answers, designed to provide further understanding of the

important aspects of the history, physical examination, differential diagnosis, diagnostic work-up and management, and questions that may arise on surgical rounds and on the shelf exam. The book is written in an easy-to-understand manner to help reinforce important surgical exam concepts. The second edition of *Surgery: A Case Based Clinical Review* will be of great utility for medical students when they rotate on surgery, as well as interns, physician assistant students, nursing students, and nurse practitioner students.

This pocket-sized, quick reference describes the most common causes of disease, signs and symptoms, lab findings, radiologic findings, complications, and management issues of every major disease in each system. In a concise, manner, it utilizes tables to relay information relative to all major areas of internal medicine. An emphasis is placed on physical diagnosis and pathogenesis of disease. Additionally, it reviews all areas commonly covered on the USMLE Steps II and III and provides questions similar to those used on the exam. Includes major areas that are lacking in most internal medicine review books: physical diagnosis, laboratory medicine, medical statistics, medical genetics, preventive medicine, infectious disease by systems, and USMLE Steps II and III types of questions integrated within the material. Features material organised in a table format with concise explanations, and review questions and discussions. Includes in-depth coverage of pathogenesis of disease, heavily emphasised on Part II USMLE. Emphasises preventive medicine with coverage of primary and secondary screening and immunisations. Covers physical diagnosis and genetics, usually not covered in smaller texts.

Includes tables dedicated to use of lab tests in diagnosis/confirmation of disease. Features extensive tables on smoking, alcohol and drug abuse. Features a chapter devoted to clinical oncology with all the precursors of all major cancers, and reviews all chemotherapy drugs. Integrates a major emphasis on infectious disease by systems. Provides complete coverage of important topics such as critical care medicine, hematology, acid-base, endocrinology, and cutaneous manifestations of systemic disease. Covers nutrition as it relates to the prevention of disease. Includes tables covering all aspects of AIDS.
