Systemic and Regional Approach Springer Textbook of Special Pathological Anatomy of Domestic Animals should not be regarded merely as a textbook for students, but rather as one which will also be of assistance to them in their later work, as well as to veterinarians generally working in the various branches of the profession, in the assessment of pathological changes. As many new diseases have become known and much new information relating to pathogenesis and aetiology has been gained since the appearance of the last edition, radical revision of the book has become imperative. The discussions in this book cover the circulatory system, blood-forming organs, reticulo-endothelial system, respiratory system, digestive organs, peritoneum, nervous system, urinary organs, genital organs, organs of locomotion, endocrine glands, and skin. *Anatomy of the Domestic*

veterinary gross anatomy has been divided in six parts. The first part comprises the basics of veterinary anatomy described in the conventional form of systemic anatomy while the remaining five parts comprise region wise description of gross anatomy. Each of these parts contains the description of all anatomical structures viz. bones, joints, muscles, viscera, blood vessels, lymphatics nerves, etc located in the respective region of the animal body viz. head, neck, thorax, abdomen, pelvis and the fore and hind limb. Bovine animal, the ox, has been considered as a model species for detail description of the anatomical features, while the major differences or remarkable features in other species like horse, dog, sheep and goat, pig and fowl have been described under a separate heading as Comparative Anatomy at the end of each section. In addition to this, a separate section on Applied Anatomy has been introduced at the end of each regional part. This will make it easy to understand the applications of the anatomical features that

form the basis of surgical, diagnostic, medical and obstetrical techniques in the solution of clinical disorders which is the main purpose of regional pattern of learning the anatomy. Because of these distinctive features, the book has become a little voluminous and therefore, had to be split into two volumes. Part-I comprises the first three parts viz-General Systemic Anatomy, Anatomy of Head and Neck and the Anatomy of Thorax while the Part-II comprises the next three parts viz- the Anatomy of Abdomen and Pelvis, the Anatomy of Fore limb and the Anatomy of Hind Limb.
