undoing. High school kids kept getting younger and Paul Gaines stayed the same. Moving from one city narcotics unit to the next, his youthful looks and slender body made him a perfect undercover cop for the job. Meeting the professor wasn't part of the deal. The man was smart sexy and off limits even if he was younger than Paul. For Grey getting involved with one of his students, even if that student wore a badge meant playing with fire. Fire that could burn them both.

Travis Pastrana, the most celebrated freestyle motocross rider in the world, knows no bounds. In 1999 he celebrated his first X Games gold by launching his bike into San Francisco Bay. Three years later, he rode straight into the Grand Canyon. On purpose. In *The Big Jump: The Tao of Travis Pastrana*, he makes his biggest leap yet, revealing for the first time the methods (and madness) that fuel his amazing feats. At 14 Pastrana was the youngest World Freestyle Motocross champion. At 17 he was the youngest racer ever to represent Team USA in the Motocross des Nations. Each of *The Big Jump's* chapters builds toward another breathtaking accomplishment, ending with the "impossible" double backflip during X Games 12 that brought Pastrana not just gold but certified legend status. With a foreword by Mat Hoffman, the godfather of BMX, *The Big Jump* is a fuel-injected ride into the mind and heart of Travis Pastrana.

At nineteen, Ashley Fiolek is already the top female competitor in a tough men's sport: motocross, a form of off-road motorcycle racing that is one of the most competitive and dangerous extreme sports in the world. Since going pro in late 2007, Fiolek has taken gold at the X Games, won the American Women's Motocross Championship twice, and become the first woman in American motocross history to be signed to a factory team—the highest echelon of industry backing. But Fiolek's rise has not come without obstacles. Fiolek was born profoundly deaf, a handicap that makes everyday life difficult—and competition on the track downright dangerous. Originally misdiagnosed as "mildly retarded," she was a painfully shy and introverted child—until her parents introduced her to the world of dirt bikes, which helped her escape the silence in her head and connect with others who shared her passion. She began racing at seven, and as her successes grew through hard work and no small number of broken bones, so did her confidence. Fiolek has never believed her disability should stand in the way of her dreams. Nor has she allowed her gender to limit her career—motocross historically has been a men's sport, but with the love and support of her dirt-obsessed family, including her "Grandpa Motorcycle," her little brother, Kicker, and her dogs, Turbo and Rocco, Ashley has emerged as one of the sport's most talked-about stars, changing the way the entire industry views women. Armed with her extraordinary talent, contagious grin, and deep faith in God, Fiolek continues to venture into unknown territory, relentlessly pushing herself—and women's motocross—to ever-greater heights. Kicking Up Dirt is a remarkable, inspiring tale of a young woman's courage and determination to succeed in the face of truly challenging obstacles.

An Introduction to Atomic-, Molecular- and Quantum Physics Haynes Publishing UK

This introduction to Atomic and Molecular Physics explains how our present model of atoms and molecules has been developed over the last two centuries both by many experimental discoveries and, from the theoretical side, by the introduction of quantum physics to the adequate description of micro-particles. It illustrates the wave model of particles by many examples and shows the limits of classical description. The interaction of electromagnetic radiation with atoms and molecules and its potential for spectroscopy is outlined in more detail and in particular lasers as modern spectroscopic tools are discussed more thoroughly. Many examples and problems with solutions are offered to encourage readers to actively engage in applying and adapting the fundamental physics presented in this textbook to specific situations. Completely revised third edition with new sections covering all

actual developments, like photonics, ultrashort lasers, ultraprecise frequency combs, free electron lasers, cooling and trapping of atoms, quantum optics and quantum information.
