This essential introduction to American studies examines the core foundational myths upon which the nation is based and which still determine discussions of US-American identities today. These myths include the myth of »discovery,« the Pocahontas myth, the myth of the Promised Land, the myth of the Founding Fathers, the melting pot myth, the myth of the West, and the myth of the self-made man. The chapters provide extended analyses of each of these myths, using examples from popular culture, literature, memorial culture, school books, and every-day life. Including visual material as well as study questions, this book will be of interest to any student of American studies and will foster an understanding of the United States of America as an imagined community by analyzing the foundational role of myths in the process of nation building.

The Armenian Genocide is the only one of the genocides of the 20th century in which the nation that was decimated by genocide has been subjected to the ongoing outrage of a massive campaign of genocide denial, openly sustained by state authority. This campaign of genocide denial is a slap in the face to the Armenian people, preventing reconciliation and healing. As Pope Francis said so eloquently at his Mass marking the 100th time period of the genocide, quote, "Concealing or denying evil is like allowing a wound to keep bleeding without bandaging it."

The Next Step: Exponential Life presents essays on the potential of what are known as "exponential technologies"--those whose development is accelerating rapidly, such as robotics, artificial intelligence or industrial biology--considering their economic, social, environmental, ethical and even ontological implications. This book's premise is that humanity is at the beginning of a technological revolution that is evolving at a much faster pace than earlier ones--a revolution is so far-reaching it is destined to generate transformations we can only begin to imagine.

A WALL STREET JOURNAL BESTSELLER As Alexis Ohanian learned when he helped to co-found the immensely popular reddit.com, the internet is the most powerful and democratic tool for disseminating information in human history. And when that power is harnessed to create new communities, technologies, businesses or charities, the results can be absolutely stunning. In this book, Alexis will share his ideas, tips and even his own doodles about harnessing the power of the web for good, and along the way, he will share his philosophy with young entrepreneurs all over the globe. At 29, Ohanian has come to personify the dorm-room tech entrepreneur, changing the world without asking permission. Within a couple of years of graduating from the University of Virginia, Ohanian did just that, selling reddit for millions of dollars. He's gone on to start many other companies, like hipmunk and breadpig, all while representing Y Combinator and investing in over sixty other tech startups. WITHOUT THEIR PERMISSION is his personal guidebook as to how other aspiring entrepreneurs can follow in his footsteps. *Implications for U.S. National Security* UNESCO Publishing What makes someone leave home at the age of 16 to move to another country all by himself? What drives a person to pursue a professional kitesurfing career even though there is no sea where he is from? Why would someone study 6 years of medicine, just to not work as a medical doctor after graduation? How did the same person go from complete bankruptcy to financial independence in just a few years by moving to Asia? Julian, the author of the book,

was asked these and many more questions throughout his entire life. Many of the answers did not make any sense at the time when he took the decision but make absolute sense looking backwards. The beautiful part of these stories he has around his answers is that anyone can not only relate to them, but moreover draw important conclusions for his or her own life. Julian's thought processes are NOT rocket science. At the end, there are no good or bad decisions in life - only decisions that you make or don't make. Sometimes someone (you?) just need a little bit of reassurance that you are on the right track. Need the extra motivation to step out of your comfort zone and have personal growth (maybe you want to move abroad or start a professional sports career, or change jobs?) You are ahead of a big change and need guidance (move abroad, change jobs, personal shifts) Feel stuck at where you are and need help and support to see new ways. Are at college or graduated from college and want to know through real life lessons if you are on the right track? Want to have highly productive days and get done twice as much as usual successfully? Want to get well-tested tips on personal finance, learn how to network professionally and have fun doing business. Are doing awesome already, but want to be inspired to have even more personal growth or try something new? ...then this book is for you! Julian's 25 easy-to-relate real-life stories are packed with true value bombs and over 75 life lessons and -hacks ready for you to use. Instead of the quick-tips or cookie-cutter-problem-solution approach these 25 real life stories will give you a practical blueprint. Most people never hear about the background stories of & against the odds or against the mainstream thinking; decisions, and what happened after taking them. So when they face a moment of adversity in their own life, they lack the self-motivation to overcome that obstacle. Julian wanted to make sure, that his Younger Self has a blueprint to be well prepared for such challenges and so he collected the most inspiring stories to give not only to his Younger Self but also share with you. Julian's 25 stories will make you laugh, scream, relate, and dream - but most important: They will inspire you to take those decisions in life, that you know you want and need to make, but have been too scared of so far.

Low Tech Hacking teaches your students how to avoid and defend against some of the simplest and most common hacks. Criminals

using hacking techniques can cost corporations, governments, and individuals millions of dollars each year. While the media focuses on the grand-scale attacks that have been planned for months and executed by teams and countries, there are thousands more that aren't broadcast. This book focuses on the everyday hacks that, while simple in nature, actually add up to the most significant losses. It provides detailed descriptions of potential threats and vulnerabilities, many of which the majority of the information systems world may be unaware. It contains insider knowledge of what could be your most likely low-tech threat, with timely advice from some of the top security minds in the world. Author Jack Wiles spent many years as an inside penetration testing team leader, proving that these threats and vulnerabilities exist and their countermeasures work. His contributing authors are among the best in the world in their respective areas of expertise. The book is organized into 8 chapters covering social engineering; locks and ways to low tech hack them; low tech wireless hacking; low tech targeting and surveillance; low tech hacking for the penetration tester; the law on low tech hacking; and information security awareness training as a countermeasure to employee risk. This book will be a valuable resource for penetration testers, internal auditors, information systems auditors, CIOs, CISOs, risk managers, fraud investigators, system administrators, private investigators, ethical hackers, black hat hackers, corporate attorneys, and members of local, state, and federal law enforcement. Contains insider knowledge of what could be your most likely Low Tech threat. Includes timely advice from some of the top security minds in the world. Covers many detailed countermeasures that you can employ to improve your security posture.

The more mobile an armed force becomes, the more rugged the terrain it encounters, or the more widely the force is deployed, the greater becomes the difficulty of securing and maintaining rapid, completely linked communications. In the U.S. Army the Signal Corps is the agency charged with developing, procuring, and furnishing signal equipment to overcome the difficulties mentioned above. In an age of swift and startling progress in electronics, this phase of its mission demands that it keep abreast of scientific advances at home and abroad and maintain close ties with civilian laboratories and industry in order to take advantage

of their capabilities. This volume traces the course which the Signal Corps followed between the first and second world wars, a period of planning and preparation. Others to follow will recount the testing of the Corps' organization and equipment, and the results achieved at home and overseas. The author has dealt with the subject on a chronological basis, instead of following the topical treatment used in other technical service volumes. This broad-front approach has enabled him to weave into one pattern the many activities in which the Signal Corps was simultaneously engaged. The reader can here follow from birth the history of Army radar and mobile radio, the first steps taken in the conversion of the civilian communications industry to war production, the expansion of training facilities, and the beginnings of the far-flung communications network that eventually encircled the globe. He will see the uncertainties of planning and the difficulties of organization incident to rapidly changing conditions, meager appropriations, and the clash of interest within the military household. These and many other matters showing human beings and institutions under pressure are replete with significance to us who must live in a turbulent world where revolution tends to have the upper hand over evolution.

This anthology provides insight and observations on the importance of the Eurasia region, including Russia and other countries of the former USSR. The articles that make up this work provide a detailed description of regional realities, including a contextual discussion of the current Ukraine situation, viewed through the prism of Russia's traditional military-strategic culture. As with all countries in the Eurasian region, Russia's traditional strategic interests play a critical role in the geopolitical and socio-cultural situation in that region. The anthology was created for the Army University Press, but goes beyond the obvious military strategic nexus and seeks to identify new spaces for consideration by planners and policymakers alike.

We often hear that success requires pushing the boundaries, coloring outside the lines, stepping on toes, and breaking all the rules. But some rules are so critical they aren't meant to be broken. Here, perennially popular Good Morning America host Robin Roberts reveals the 8 rules that she has always honored on her road to success. Illustrated with stories from her work, her family, and her faith, she explains how deceptively simple maxims like "Never lose sight of the Big Picture" and "Give people the benefit of the doubt" are both deeply meaningful and crucial to happiness and genuine accomplishment. Combined with a good dose of Robin's trademark humor, warmth, and honesty, this book will be required reading for anyone in need of an infusion of sincere inspiration. And in light of her announcement in July 2007 that she had breast cancer, Robin's message is bound to touch an even larger audience.

An Introduction to American Studies Walter de Gruyter GmbH & Co KG

The power of monarchs has traditionally been as much symbolic as actual, rooted in popular imagery of sovereignty, divinity, and authority. In *Mystifying the Monarch*, a distinguished group of contributors explores the changing nature of that imagery—and its political and social effects—in Europe from the Middle Ages to the present day. They demonstrate that, rather than a linear progression where perceptions of rulers moved inexorably from the sacred to the banal, in reality the history of monarchy has

been one of constant tension between mystification and demystification.

The series Religion and Society (RS) contributes to the exploration of religions as social systems – both in Western and non-Western societies; in particular, it examines religions in their differentiation from, and intersection with, other cultural systems, such as art, economy, law and politics. Due attention is given to paradigmatic case or comparative studies that exhibit a clear theoretical orientation with the empirical and historical data of religion and such aspects of religion as ritual, the religious imagination, constructions of tradition, iconography, or media. In addition, the formation of religious communities, their construction of identity, and their relation to society and the wider public are key issues of this series.

Although we have been successful in our careers, they have not turned out quite as we expected. We both have changed positions several times-for all the right reasons-but there are no pension plans vesting on our behalf. Our retirement funds are growing only through our individual contributions. Michael and I have a wonderful marriage with three great children. As I write this, two

are in college and one is just beginning high school. We have spent a fortune making sure our children have received the best education available. One day in 1996, one of my children came

home disillusioned with school. He was bored and tired of studying. "Why should I put time into studying subjects I will never use in real life?" he protested. Without thinking, I

responded, "Because if you don't get good grades, you won't get into college." "Regardless of whether I go to college," he replied, "I'm going to be rich."
