Fish Farm Kerala - Home | Facebook

Biofloc system is a technology in which the materials which are harmful and poisonous to the fish or shrimp are transformed into some protein food. This is basically used in aqua farming when the density of stocking is high with very less exchange of water. This method would be run productively when the tanks used are kept in direct sunlight.

Fish farming can be combined with agriculture, animal husbandry and irrigation practices, which can lead to better utilisation of local re-sources and ultimately to higher production and net profits. This prac-tice is called 'integrated fish farming' and the subject is extensively dealt with in Agrodok No. 21.
