Over the
course of
2020, the
most
devastating
Desert Locust
upsurge of the

past 25 years
has spread
across parts of
the Middle
East, the
greater Horn
of Africa, and
southwest
Asia. The
upsurge poses
an
unprecedente
d risk to
livelihoods
and food

security in some of the most food insecure countries in the world. FAO and its partners have mobilized more than USD 163 million since January 2020. The response includes three key pillars: (1) curbing the spread of desert locusts (including surveillance) (2) safeguarding livelihoods and promoting recovery and (3) coordination and preparedness of the rapid surge support.

In this context, the FAO Office of Evaluation (OED) has been requested by the Director-General to conduct a real time evaluation (RTE), conducted across three phases spread over one year. Each phase will cover specific aspects of the response. Phase 1 focuses on leadership, management and coordination of the response and was conducted

from June to October 2020. The findings, conclusions and recommendations of this phase 1 have been presented to a wide range of stakeholders and are developed in the Phase 1 report. Phase 2 focuses on results as well as management and operations at country level. Phase 3 will complete the RTE process drawing lessons for future operations and FAO's work on

desert locust
in the region.

In this context, the present study focuses on the relationship of Italian, American, British, French and German Armed Forces</p>	<p>with Information Communication Technology (ICT). The aim is to analyse in a Euro-Atlantic perspective the path undertaken by the Italian Army to develop Network Enabled Capabilities (NEC) through the "Forza NEC" Program. The acronym NEC refers to the interconnection of different elements of the Armed Forces in a single broad network, making them interact in</p>
--	---	--

order to achieve a strategic superiority. The book is composed of three chapters, which offer respectively an analysis of the American case, an overview of recent developments in France, Germany and the UK, and a discussion of the situation in Italy. The volume - which comes four years after the IAI publication *The Transformation of Armed Forces: The Forza NEC*

Program - aims at analysing state of the art of the evolving relationship between technological innovation and the Armed Forces. This evolution is hindered by the fact that efforts to digitize and interconnect land forces and their equipment by using ICT sometimes clash with both operational difficulties and budget constraints. Such a clash poses challenges

and roadblocks on the way towards NEC undertaken by the Armed Forces of the countries discussed in this book. [Technological Innovation and Defence: The Forza NEC Program in the Euro-Atlantic Framework](#) Edizioni Nuova Cultura Information technology (IT) has had, and will continue to have, a deep impact on the defence sector. The most advanced countries, not only the U.S.

but also France, Great Britain and Italy, over the past few years have undergone a transformation of their armed forces aimed at exploiting the strategic advantages of IT. The goal pursued in Europe, and also promoted by NATO, is Network Enabled Capability (NEC). That is combining equipment and soldiers, as well as different doctrinal, procedural, technical and organizational elements, into

a single network to obtain their interaction in order to achieve substantial strategic superiority. In practice, this also occurs with a strong, efficient and secure telecommunications network, and through netcentric modernization of armed forces' capability and systems aimed at connecting them to the net. This research paper analyzes the military

netcentric modernization and transformation programs - still in progress - in France, Britain and Italy, with special focus on the joint program led by the Italian army called "Forza NEC". Opportunities and challenges of "Forza NEC" have been considered according to the Italian armed force's requirements, developed during two decades of experience in international military operations, as

well as in the light of the evolution of strategic doctrine at a European and transatlantic level. Particular attention has been devoted to the interaction between industry and the armed forces, and to the involvement of many Italian companies in different "Forza NEC" activities, as it represents one of the pillars of the procurement program.
