Gifted students can exhibit extreme variance in both their abilities and their interests, yet they are often treated within schools as one homogeneous, specialized population. Personalized Learning in Gifted Education helps educators strengthen their differentiation of both instruction and services for advanced students. This book:

- helps educators develop the specific gifts and talents of the gifted students they serve
- includes a year-long plan for professional learning communities seeking to transform their programs
- demonstrates how educators can utilize the wealth of data they have at their disposal
- provides a rationale and blueprint for a stronger, more personalized approach to gifted education
- offers suggestions for both elementary and secondary schools. Recommendations center around five features of personalized learning: personalized learning plans, project- or problem-based learning, competency-based progression through the curriculum, criterion-referenced assessments, and multi-year mentoring.

Concerns about quality mathematics education are often posed in terms of the types of mathematics that are worthwhile and valuable for both the student and society in general, and about how to best support students so that they can develop this mathematics. Concerns about equity are about who is excluded from the opportunity to develop quality mathematics within our current practices and systems, and about how to remove social barriers that systematically disadvantage those students. This collection of chapters summarises our learning about the achievement of both equity and quality agendas in mathematics education and to move forward the debate on their importance for the field.

The book offers an interdisciplinary perspective on finance, with a special focus on stock markets. It presents new methodologies for analyzing stock markets' behavior and discusses theories and methods of finance from different angles, such as the mathematical, physical and philosophical ones. The book, which aims at philosophers and economists alike, represents a rare yet important attempt to unify the externalist with the internalist conceptions of finance.

Elementary Math Workouts: Fractions Springer Science & Business Media

What is the animating 'spirit' behind what may appear to be the coldly calculating world of markets and business enterprise? Though often mathematically modelled in dry terms, markets can be looked at instead as meaningful domains of human activity. To economists, markets have been seen as nothing but objective 'forces' or allocation 'mechanisms'. This book, however, argues that they can be seen as involving the human spirit, personal expression and moral commitments. It presents the view that markets are not so much things that need to be measured as meanings that need to be narrated and interpreted. The aim of this book is to introduce two scholarly fields to one another, economics and cultural studies, in order to pose the question: how does culture matter to the economy? When we look at the economy as a legitimate domain of culture, it transforms our understanding of the nature of business life. By viewing markets as an integral part of our culture, filled with the drama of human creativity, we might begin to better appreciate their role in the world.
