The first collective record of the evolution of general medical practice as an academic discipline over half a century. This anthology captures the stories of the early struggles to set up university departments between visionary supporters and traditionalist blockers as well as the steadily increasing successes aided by a dedicated funding system. The accounts are written where possible by the people involved in the early developments of their subject. These tales are of vision, commitment and resilience and are interesting both in their own right and for the more general lessons they tell us about the processes of creating institutional change within a modern democracy.

Business processes are among today's hottest topics in the science and practice of information systems. Business processes and workflow management systems attract a lot of attention from R&D professionals in software engineering, information systems, business-oriented computer science, and management sciences. The carefully reviewed chapters contributed to this state-of-the-art survey by internationally leading scientists consolidate work presented at various workshops on the

topic organized by the editors of the book in the past few years. The book spans the whole spectrum of business process management ranging from theoretical aspects, conceptual models, and application scenarios to implementation issues. It will become a valuable source of reference and information for R&D professionals active in the fascinating interdisciplinary area of business process management and for ambitious practitioners.

This volume originates from two workshops, both focusing on themes that are reflected in the title of the volume. The first workshop took place at Eindhoven University of Technology, April 24-26, 2001, on the occasion of the

University granting a doctorate honoris causa to Professor John A. Buzacott. The second workshop was held on June 15, 2002 at Cornell University (preceding the annual INFORMS/MSOM Conference), honoring John's retirement and his lifetime contributions. Each of the two workshops consisted of about a dozen technical presentations. The objective of the volume, however, is not to simply publish the proceedings of the two workshops. Rather, our objective is to put together a select set of articles, each organized into a well-written chapter, focusing on a timely topic. Collected into a single volume, these chapters aim to serve as a useful reference for researchers and practitioners alike, and also as reading materials for graduate courses or

seminars.

The human Race is at war with the Vicious Dalki and when they needed help more than ever, THEY started to come forward. Humans who had hidden in the shadows for hundreds of years, people with abilities. Some chose to share their knowledge to the rest of the world in hopes of winning the war, while others kept their abilities to themselves. Quinn had lost everything to the war, his home, his family and the only thing he had inherited was a crummy old book that he couldn't even open. But when the book had finally opened, Quinn was granted a system and his whole life was turned

around. He completed quest after quest and became more powerful, until one day the system gave him a quest he wasn't sure he could complete. "It is time to feed!" "You must drink human blood within 24 hours" "Your HP will continue to decrease until the task has been completed" More info, visit: <https://www.webnovel.com/>

The focus of this book is the P versus NP Question and the theory of NP-completeness. It also provides adequate preliminaries regarding computational problems and computational models.

The P versus NP Question asks whether or not finding solutions is harder than checking the correctness of solutions. An alternative formulation asks whether or not discovering proofs is harder than verifying their correctness. It is widely believed that the answer to these equivalent formulations is positive, and this is captured by saying that P is different from NP. Although the P versus NP Question remains unresolved, the theory of NP-completeness offers evidence for the intractability of specific problems in NP by showing that they are universal for the entire class. Amazingly enough, NP-complete problems exist, and furthermore hundreds of natural computational problems arising in many different areas of mathematics and science are NP-complete.

Algerian migration to France began at the end of the 19th century, but in recent years France's Algerian community has been the focus of a shifting public debate encompassing issues of unemployment, multiculturalism, Islam, and terrorism. In this finely crafted historical and anthropological study, Paul A. Silverstein examines a wide range of social and cultural forms -- from immigration policy, colonial governance, and urban planning to corporate advertising, sports, literary

narratives, and songs -- for what they reveal about postcolonial Algerian subjectivities. Investigating the connection between anti-immigrant racism and the rise of Islamist and Berberist ideologies among the "second generation" ("Beurs"), he argues that the appropriation of these cultural-political projects by Algerians in France represents a critique of notions of European or Mediterranean unity and elucidates the mechanisms by which the Algerian civil war has been transferred onto French soil.

Qigong a regimen of body, breath, and mental training exercises was one of the most widespread cultural and religious movements of late-twentieth-century urban China. The practice was promoted by senior Communist Party leaders as a uniquely Chinese healing tradition and as a harbinger of a new scientific revolution, yet the movement's mass popularity and the almost religious devotion of its followers led to its ruthless suppression. In this absorbing and revealing book, David A. Palmer relies on a combination of historical, anthropological, and sociological perspectives to describe the spread of the qigong craze and its reflection of key trends that have shaped China since 1949, including the search for a national

identity and an emphasis on the absolute authority of science. Qigong offered the promise of an all-powerful technology of the body rooted in the mysteries of Chinese culture. However, after 1995 the scientific underpinnings of qigong came under attack, its leaders were denounced as charlatans, and its networks of followers, notably Falungong, were suppressed as "evil cults." According to Palmer, the success of the movement proves that a hugely important religious dimension not only survived under the CCP but was actively fostered, if not created, by high-ranking party members. Tracing the complex relationships among the masters, officials, scientists, practitioners, and ideologues involved in qigong, Palmer opens a fascinating window on the

transformation of Chinese tradition as it evolved along with the Chinese state. As he brilliantly demonstrates, the rise and collapse of the qigong movement is key to understanding the politics and culture of post-Mao society.

It is now held that writing influences and is influenced by the discipline where it occurs. The representations that writers employ to produce and comprehend texts are said to be sensitive to the specificities of their disciplinary discourse communities. This exposes writers to divergent disciplinary demands and expectations on what counts as good and appropriate writing in terms of generic structure, discourse features, and stylistic preferences, reflecting dissimilar practices. Because of such exigencies, academic writing seems at times to be very challenging, especially for novice scholars. Thus, any attempt to perceive the function of academic writing in higher education or

to evaluate its quality should not discard the shaping force of the disciplines. *Teaching Academic Writing as a Discipline-Specific Skill in Higher Education* is a critical scholarly resource that examines the role of writing within academic circles and the disciplinary practices of writing in scholastic environments. The book will also explore the particular difficulties that confront writers in the disciplines as well as the endeavors of educational institutions to develop discipline-specific writing traditions among practicing and novice scholars. Featuring a range of topics such as blended learning, data interpretation, and knowledge construction, this book is essential for instructors, academicians, administrators, professors, researchers,

and students.

In *Going Online*, one of our most respected online learning leaders offers insights into virtual education—what it is, how it works, where it came from, and where it may be headed. Robert Ubell reaches back to the days when distance learning was practiced by mail in correspondence schools and then leads us on a tour behind the screen, touching on a wide array of topics along the way, including what it takes to teach online and the virtual student experience. You'll learn about: how to build a sustainable online program; how to create an active learning online course; why so many faculty resist teaching online; how virtual teamwork enhances digital instruction;

how to manage online course ownership; how learning analytics improves online instruction. Ubell says that it is not technology alone, but rather unconventional pedagogies, supported by technological innovations, that truly activate today's classrooms. He argues that innovations introduced online—principally peer-to-peer and collaborative learning—offer significantly increased creative learning options across all age groups and educational sectors. This impressive collection, drawn from Ubell's decades of experience as a digital education pioneer, presents a powerful case for embracing online learning for its transformational potential.

The main topic of this book is the introduction of a new mobility service: One-Way and Open-End car-sharing. Dr. Bodo Schwieger describes a process starting from the anticipation and measurement of customer's needs to the introduction of innovative services. The described field test is second to none, as it offers gasoline vehicles in a One-Way rental scheme within an urban environment: 25 Smart vehicles were based at 8 stations and available to 4,000 car-sharing customers. This service is being analyzed for efficiency and customer reactions. In a second step, other car-sharing companies in Hamburg (Germany), Seattle (Washington), Kyoto and Tokyo (Japan)

are analyzed for their approaches to improving their services. combines technological competence, marketing know-how and customer analysis. Car-sharing has recently become a highly relevant topic with the fast expansion of the American providers and the market entry of Deutsche Bahn AG and Shell AG in Germany. The method respects the large amount of interdependence with other services and also the multiplicity of different customer groups. Thus it can be transferred to other (transportation) services - and used as a beginner's guide to service analysis. The book is based on the author's dissertation, which was accepted at the Technical University of Berlin in 2003. It delivers, on 150 pages, densely accumulated information. It is worth reading for

anyone who is involved in introducing and developing new services, either within transportation or in related branches.
