50th Anniversary Edition With a New Preface and Two Bonus Essays The most influential critique of psychiatry ever written, Thomas Szasz's classic book revolutionized thinking about the nature of the psychiatric profession and the moral implications of its practices. By diagnosing unwanted behavior as mental illness, psychiatrists, Szasz argues, absolve individuals of responsibility for their actions and instead blame their alleged illness. He also critiques Freudian psychology as a pseudoscience and warns against the dangerous overreach of psychiatry into all aspects of modern life.

Price theory, often misleadingly labeled "microeconomics," is the explanation of how individual actors coordinate via markets, prices, and exchange to produce, distribute, and consume goods and services. Worked out more than a century ago, it remains the core of modern economic theory. This text, first published in 1986 and now combining material from the first two editions, emphasizes understanding over formal analysis, using verbal explanation to supplement mathematical argument. While optional sections require an understanding of calculus, the central arguments do not. The theory, once worked out, is applied both to the conventional topics of the classroom and to less obviously economic features of human behavior-love, marriage, crime, politics."Although the range of behavior analyzed with the economic way of thinking has been greatly extended during the past several decades, textbooks on economic principles generally have taken a much narrower view of the scope of economics. This is not surprising since recent developments in a scientific field usually do not find their way into textbooks for many years. Fortunately, several economics texts in recent years have begun to take a broader view, and this text by David Friedman does so in the most thoroughgoing and satisfactory manner of any that I have seen. Every chapter shows evidence of a skilled and imaginative economist applying his tools to the world around him."(From the forward by Gary Becker)

A unique and comprehensive overview of the field and its current issues, Cybercriminology analyzes cybercrimes through the lens of criminology. Featuring an accessible, conversational writing style, it first discusses traditional criminological theories of criminal behavior and then analyzes how these theories--the existing literature and empirical studies--can be applied to explain cybercrimes. The text also introduces students to types of cybercrime, the nature and extent of cybercrime in the U.S. and abroad, and victim and offender behavior in the online environment. FEATURES \* Real-world case studies and examples demonstrate the extent and complexity of cybercriminology \* Boxed features present compelling research topics and scenarios \* Review questions stimulate classroom discussions \* An Ancillary Resource Center contains an Instructor's Manual, a Test Bank, and PowerPoint lecture outlines

Written during the winter of 1857-8, the Grundrisse was considered by Marx to be the first scientific elaboration of communist theory. A collection of seven notebooks on capital and money, it both develops the arguments outlined in the Communist Manifesto (1848) and explores the themes and theses that were to dominate his great later work Capital. Here, for the first time, Marx set out his own version of Hegel's dialectics and developed his mature views on labour, surplus value and profit, offering many fresh insights into alienation, automation and the dangers of capitalist society. Yet while the theories in Grundrisse make it a vital precursor to Capital, it also provides invaluable descriptions of Marx's wider-ranging philosophy, making it a unique insight into his beliefs and hopes for the foundation of a communist state.  
*The Human Eye* Henry Holt and Company  
This textbook provides students and clinicians with information on the molecular structures and biochemical events that occur in the

eye. Linking basic science to clinical practice with specific examples, this comprehensive resource helps students understand this challenging topic. The book is organized according to biochemical classes of compounds since much ocular biochemistry is the same in all tissues of the eye. General biochemistry is discussed in each chapter, in addition to material that is peculiar to specific ocular tissues. Many examples of biochemical pathology and disease processes, such as age-related cataract formation and ocular diabetes, are described.

Paradigmatic transition is the idea that ours is a time of transition between the paradigm of modernity, which seems to have exhausted its regenerating capacities, and another, emergent time, of which so far we have seen only signs. Modernity as an ambitious and revolutionary sociocultural paradigm based on a dynamic tension between social regulation and social emancipation, the prevalent dynamic in the sixteenth century, has by the twenty-first century tilted in favour of regulation, to the detriment of emancipation. The collapse of emancipation into regulation, and hence the impossibility of thinking about social emancipation consistently, symbolizes the exhaustion of the paradigm of modernity. At the same time, it signals the emergence of a new paradigm or new paradigms. This updated 2020 edition is written for students taking law and globalization courses, and political science, philosophy and sociology students doing optional subjects.

Los veinticinco años de experiencia como profesora de la autora en la UNED, hacen que este libro esté orientado fundamentalmente a la educación a distancia. Los capítulos mantienen prácticamente la misma estructura a lo largo de toda la obra. Cada tema se divide en cuatro partes: - Una primera donde se analizan individualmente los autores a través de sus biografías y contextos históricos. - Un texto, en prosa o verso, con notas al pie sobre las palabras o giros gramaticales que presentan más dificultad en su traducción del inglés. - Cuestiones de autoevaluación. - Otras cuestiones preparatorias más amplias. En algunos casos se añaden recuadros con sugerencias de estudio

This book, written by a team of international authorities, presents a coherent introduction to ocular biochemistry of each structure within the eye. An introduction is provided to each topic, followed by more in-depth coverage of the most recent research results, with liberal use of helpful illustrations. The book provides an understanding of the normal eye which is essential before attempting to comprehend ocular diseases, most of which involve the slow degeneration of normal metabolic and control systems. It is written for ophthalmologists in training and those pursuing a career in vision research, and provides a useful source of reference to qualified ophthalmologists and those teaching biochemistry and ocular science.

A revolution has occurred during our lifetime in the collection, storage, and communication of information, a revolution whose full significance is scarcely understood even by those responsible for its development. At the core of this revolution, and its most visible component, is electronic data processing via the computer. The computer has shown an impressive ability to handle increasing complexity at greater speeds while decreasing its use of power, cost, and space. In this book, however, John McHale shows how the impact of the information revolution stretches far beyond these specific developments. It lies (1) in the expansion and interlinkage of computer-based systems and their extension into larger areas of automated control; (2) in the convergence and relationship of such systems with concurrently developing

communications technologies; and (3) in the ways in which these combine together to create a radically new information environment, whose major impacts will be felt most critically within the next ten to twenty years. Mr McHale believes that the emergence of information and knowledge as our basic resources signifies profound consequences that will affect the structure of society itself and the institutional and value premises upon which

it operates: The increased dependence upon information as key societal resource will move society, within the next ten to twenty years, from industrially based forms to post-industrial forms whose possible configurations of institutions, governance and value systems are still open to conjecture. In society in general, with the new social wealth generated by information and communications technologies, the whole character of the survival

game is being changed. It is now more clearly a non-zero-sum game in which success or gain is predicated on all winning. Harperbusiness
