These guidelines provide recommendations that outline the critical aspects of infection prevention and control. The recommendations were developed using the best available evidence and consensus methods by the Infection Control Steering Committee. They have been prioritised as key areas to prevent and control infection in a healthcare facility. It is recognised that the level of risk may differ according to the different types of facility and therefore some recommendations should be justified by risk assessment. When implementing these recommendations all healthcare facilities need to consider the risk of transmission of infection and implement according to their specific setting and circumstances.

Although pain is one of the most fundamental and unique experiences we undergo in everyday life, it also constitutes one of the most enigmatic and frustrating subjects for many scientists. This book provides a detailed analysis of why this issue is grounded in the nature of pain itself. It also offers a philosophically driven solution of how we may still approach pain in a theoretically compelling and practically useful manner. Two main theses are defended: (i) Pain seems inscrutable because there exists no property that is commonly shared by all types of pain and that is at the same time particular to pain, setting it apart from other bodily sensations. This applies irrespective of whether we consider the psychological dimensions, neural networks, causal relations or biological functions of pain. Consequently, it is impossible to refer to ideal far-reaching and ideal distinct generalizations on the matter of pain. (ii) Despite this challenge, by focusing on the resemblance relations that hold across pains, we can generate scientific progress in explaining, predicting and treating pain. In doing so, the book aims to provide a clear conceptual basis for interdisciplinary communication and a useful heuristic for future research.

*Video-Reflexive Ethnography in Health Research and Healthcare Improvement* Springer

The first edition of *Pharmacy Practice Research Methods* provided a contemporary overview of pharmacy practice research, discussing relevant theories, methodologies, models and techniques. It included chapters on a range of quantitative, qualitative, action research and mixed methods as well as management theories underpinning change in pharmacy practice. This new edition of the book is much broader and more diversified. It includes the quality improvement methods in pharmacy practice research, focusing on the key differences between high and low-income countries with regard to pharmacy practice research, as well as the main challenges faced when conducting such research – areas of significant global interest. In addition, a number of the chapters covering fast-moving fields where new methods have been developed and published have been updated. Featuring seven new topics and presenting future trends, the book also explains in detail methods used in covert and overt observations in pharmacy practice, as well as methods involved in realist research, which are important to countries seeking to produce evidence-based information in this area.

A practical and evidence-based guide for student, pre-registration and qualified pharmacists *Symptoms in the Pharmacy* is an indispensable guide to the management of common symptoms seen in the pharmacy. With advice from an author team that includes both pharmacists and GPs, the book covers ailments which will be encountered in the pharmacy on a daily basis. Now in its sixth edition *Symptoms in the Pharmacy* has been fully revised to reflect the latest evidence and availability of new medicines. There are new sections and case studies for 'POM' to 'P' switches including chloramphenicol, sumatriptan, diclofenac, naproxen and amorolfine. This edition features colour photographs of skin conditions for the first time enabling the differentiation and diagnosis of common complaints. The public health and illness prevention content have been expanded to support this increasingly important aspect of the pharmacist's work. The book is designed for quick and easy reference with separate chapters for each ailment. Each chapter incorporates a decision making framework in which the information necessary for treatment and suggestions on 'when to refer' is distilled into helpful summary boxes. At the end of each chapter there are example case studies providing the view of pharmacists, doctors and patients for most conditions covered. These easy-to-follow-chapters can be read cover to cover or turned to for quick reference. This useful guide should be kept close at hand for frequent consultation.

Historically associated with military service, conscientious objection has become a significant phenomenon in health care. Mark Wicclair offers a comprehensive ethical analysis of conscientious objection in three representative health care professions: medicine, nursing and pharmacy. He critically examines two extreme positions: the 'incompatibility thesis', that it is contrary to the professional obligations of practitioners to refuse provision of any service within the scope of their professional competence; and 'conscience absolutism', that they should be exempted from performing any action contrary to their conscience. He argues for a compromise approach that accommodates conscience-based refusals within the limits of specified ethical constraints. He also explores conscientious objection by students in each of the three professions, discusses conscience protection legislation and conscience-based refusals by pharmacies and hospitals, and analyzes several cases. His book is a valuable resource for scholars, professionals, trainees, students, and anyone interested in this increasingly important aspect of health care.

The Case for Interprofessional Collaboration recognises and explores the premium that modern health systems place on closer working relationships. Each chapter adopts a consistent format and a clear framework for professional relationships, considering those with the same profession, other professions, new partners, policy actors, the public and with patients. Section one, *Policy into Practice*, considers a series of analytical models which provide a contemporary account of collaboration theory, including global developments. The second section of the book, *Practice into Policy*, examines real-life drivers for behavioural change. The third section evaluates personal learning and learning together. \* Highlights the barriers to collaboration, how to overcome them, and the resulting dividends \* Enlivens health policy with a view to transformative adaptations in the workplace \* Draws on international examples of effective practice for local application This book is designed for those in the early stages of their careers as health and social care professionals. It is also aimed at managers and educators, to guide them in commissioning and providing programmes to promote collaboration.

The main strength of this book is that it examines the challenges facing the field of Bioethics today from medical, ethical and legal perspectives. A critical exchange of ideas from professionals in interdisciplinary fields allows everyone to learn and benefit from the insights gained through others' experiences. Examining, analyzing and understanding these complex medical-ethical-legal issues and cases and how they are resolved will serve as a paradigm for all professionals who will be confronted with these complex bioethical issues now and in the future. The more we face these challenges directly, examine them critically and

debate them enthusiastically the more knowledge will be gained and hopefully, we will gain more practical wisdom.

Multicultural Pharmaceutical Education spotlights methods and theory on how to increase representation of minorities in pharmacy schools and practice settings. Many of the ideas presented in this book are unique, and all provide an opportunity for institutions with few minority students to greatly improve their recruitment and retention efforts geared toward these students. The contributing authors, representing all levels of academia--deans, undergraduate students, vice provosts, executive directors, a National Professor of the Year, and faculty members--have all had experience in some aspect of minority pharmaceutical education. It is through their practical experiences that they offer suggestions and commentary on pharmacy programs of study. Historical accounts or examples of success that could be emulated at other institutions are included. With the help of Multicultural Pharmaceutical Education, colleges and universities and their faculty can forge ahead in attracting and retaining minority students to their pharmacy programs and into the world of pharmacy practice. Structured around four major areas (foundation, commitment, actuation, and conclusion), the authors remove the option of traditional excuses of failure in this important area of education. All those involved in pharmacy education should read this book whether deans, admissions counselors, professors, or students. Multicultural Pharmaceutical Education provides an easy-to-read, practical and theoretical approach to improving the opportunity and quality of education that minority students can achieve in pharmaceutical programs.

**PROMOTING PARTNERSHIP FOR HEALTH** This book forms part of a series entitled *Promoting Partnership for Health* published in association with the UK Centre for the Advancement of Interprofessional Education (CAIPE). The series explores partnership for health from policy, practice and educational perspectives. Whilst strongly advocating the imperative driving collaboration in healthcare, it adopts a pragmatic approach. Far from accepting established ideas and approaches, the series alerts readers to the pitfalls and ways to avoid them.

**DESCRIPTION** *Interprofessional Teamwork for Health and Social Care* is an invaluable guide for clinicians, academics, managers and policymakers who need to understand, implement and evaluate interprofessional teamwork. It will give them a fuller understanding of how teams function, of the issues relating to the evaluation of teamwork, and of approaches to creating and implementing interventions (e.g. team training, quality improvement initiatives) within health and social care settings. It will also raise awareness of the wide range of theories that can inform interprofessional teamwork. The book is divided into nine chapters. The first 'sets the scene' by outlining some common issues which underpin interprofessional teamwork, while the second discusses current teamwork developments around the globe. Chapter 3 explores a range of team concepts, and Chapter 4 offers a new framework for understanding interprofessional

teamwork. The next three chapters discuss how a range of range of social science theories, interventions and evaluation approaches can be employed to advance this field. Chapter 8 presents a synthesis of research into teams the authors have undertaken in Canada, South Africa and the UK, while the final chapter draws together key threads and offers ideas for future of teamwork. The book also provides a range of resources for designing, implementing and evaluating interprofessional teamwork activities.

**Models and Frameworks for Implementing Evidence-Based Practice** Cambridge University Press

The Evidence-Based Nursing Series is co-published with Sigma Theta Tau International (STTI). The series focuses on implementing evidence-based practice in nursing and mirrors the remit of *Worldviews on Evidence-Based Nursing*, encompassing clinical practice, administration, research and public policy. *Models and Frameworks for Implementing Evidence-Based Practice: Linking Evidence to Action* looks at ways of implementing evidence gained through research and factors that influence successful implementation. It acknowledges the gap that exists between obtaining evidence and the practicalities of putting it into practice and provides direction to help to close this gap. This, the first book in the series, helps the reader to make decisions about the appropriateness of using various models and frameworks. A selection of models and frameworks are examined in detail including examples of their use in practice. The book concludes with an analysis and synthesis of the included models and frameworks. The models and frameworks that have been included are based on a number of criteria: that they are internationally recognised, have undergone widespread evaluation and testing, are transferable across different settings, and can be used by different disciplines. Models and frameworks include: Stetler Model Ottawa Model of Research Use IOWA model of evidence-based practice Advancing Research and Clinical Practice through Close Collaboration (ARCC) model Dobbins' dissemination and use of research evidence for policy and practice framework Joanna Briggs Institute model Knowledge to Action framework Promoting Action on Research Implementation in Health Services (PARiHS) Key Points: Includes an overview of implementation issues and the use of theory and frameworks in implementing evidence into practice Chapters are written by the developers of the model or framework Each chapter provides background on an implementation model or framework, suitable applications, underlying theory and examples of use Each chapter examines strengths and weaknesses of each model alongside barriers and facilitators for its implementation
