This book is written keeping in mind the students of SAP production planning, Engineering undergraduates, Management graduates and working professionals. For lucid understanding of concepts to the readers, extensive use of screenshots has been made in the book. The book begins with explaining organizational structure, not only the elements important from PP point of view, but also those important from MM and SD point of view. After organizational structure, an entire chapter has been dedicated to configurations required to setup master data, order type and processes for production planning in discrete industry. Consultants often face some specific issues while creating certain master data or executing certain processes, this book also discusses solution to such issues. This book introduces you with the concept of MRP and essential configuration required for setting up MRP in SAP system. You will also be guided through two important production strategies - Make-to-stock and Make-to-order - showing you both end-to-end scenarios in discrete manufacturing with the help of screenshots. Furthermore, two important types of quality inspection scenarios - Inprocess Inspection and Final Inspection - have been shown along with quality management master data setup. The last chapter is a very important chapter based on ASAP methodology of SAP implementation providing you guidance through each phase of implementation and equipping you with a good understanding of business processes and requirements. Thus this book brings you a knowledge bank covering diverse topics from configurations and production processes to quality management integration to implementation project.

This volume is the second one of the 16th East-European Conference on Advances in Databases and Information Systems (ADBIS 2012), held on September 18-21, 2012, in Poznań, Poland. The first one has been published in the LNCS series. This volume includes 27 research contributions, selected out of 90. The contributions cover a wide spectrum of topics in the database and information systems field, including: database foundation and theory, data modeling and database design, business process modeling, query optimization in relational and object databases, materialized view selection algorithms, index data structures, distributed systems, system and data integration, semi-structured data and databases, semantic data management, information retrieval, data mining techniques, data stream processing, trust and reputation in the Internet, and social networks. Thus, the content of this volume covers the research areas from fundamentals of databases, through still hot topic research problems (e.g., data mining, XML data processing), to novel research areas (e.g., social networks, trust and reputation, and data stream processing). The editors of this volume believe that its content will inspire the researchers with new ideas for future development. It may also serve as an overview of the ongoing work in the field of databases and information systems.
