Do you want to deepen automated trading skills? or you have a good basic level of understanding but you are particularly interested in automated trading. Well, you're in the right place! This book describes in some detail what it means to engage in automated trading, specifically in the Forex market, using mt4: that is, the free trading platform that all Forex brokers offer. Warning! The concepts you will find in this book are also compatible for automated trading in markets other than the Forex, such as stocks, commodities and indices. I will mainly talk about the Forex, but the concepts are equally applicable and scalable in other markets. The book is structured for the very beginners, or those who have never done automated trading. But it is good to have a basic knowledge of operational terms: for this I suggest you read my first ebook "Forex Trading Online - From Zero to Trader", tailor-made for those who start from scratch: a book which will help you step-by-step from the very beginning to a level where you will be quite comfortable with the material. Thanks to this book, you will be able to learn the basics of automated trading: how to recognize valid and less valid systems and how to structure them so that they are potentially profitable in the market. Like all my textbooks, I use a very simple language: my aim is that you receive the fundamental information in the most direct and linear way possible, without big words or a polished language. To recap. This book is for you if you already have the basic skills of trading, if you are familiar with the basic terminology and if you have a minimum of manual skills in opening and closing trading transactions. This is not for you if you start completely from scratch. In this case - as I mentioned above - I advise you to first read my best seller "Trading - From Zero to Trader". Are you ready? BUY NOW !

Forex Trading - The Basics Explained in Simple Terms Rimantas Petrauskas

The Omicron Forex Trading Manual is a literate and focused explanation for non-specialists of Forex strategies for automated

(algorithmic) trading using the Dukascopy JForex Java API and associated software routines developed by Omicron Forex. The manual is also a guide to the essential general requirements of Forex trading which all traders must master. These include the ability to think in probabilities, to maintain discipline (which the automated strategies are designed to assist with) and master the psychology of Forex Trading. The manual improves the Forex trading learning process. It shows how discipline can be maintained. It also explains how the software does back-testing and it demonstrates why algorithms are important. You need automation in your Forex trading to:

- \* Significantly improve the Forex trading learning process.
- \* Carry out research and do back-testing.
- \* Help you impose discipline and appreciate the need for it.
- \* Allow for risk reduction through diversification in currency pairs, which would be onerous and error prone if attempted manually.
- \* Take over certain repetitive functions that are more appropriate for computers to handle. You do not want to use automation in your Forex trading to:
- \* "Set and forget" and leave to run unsupervised on a live account. This way lies potential disaster. The Omicron Forex Trading Manual contains an introduction to the automated strategies and does not include the software routines themselves.
