Existing narratives about how we should organize are built upon, and reinforce, a concept of 'good management' derived from what is assumed to be a fundamental need to increase efficiency. But this assumption is based on a presentist, monocultural, and generally limited view of management's past. A New History of Management disputes these foundations. By reassessing conventional perspectives on past management theories and providing a new critical outline of present-day management, it highlights alternative

conceptions of 'good management' focused on ethical aims, sustainability, and alternative views of good practice. From this new historical perspective, existing assumptions can be countered and simplistic views disputed, offering a platform from which graduate students, researchers, and reflective practitioners can develop alternative approaches for managing and organizing in the twenty-first century.

Fundamentals of Building Contract Management

Cambridge University Press

1. 1 Background of the Study: Efficiency in Cross-Cultural International Business Management Efficient

business management is crucial in achieving corporate (national or international/multinational) goals such as higher value, comprehensiveness, corporate governance, etc. Efficient business management can be achieved by resolving agency problems existing among different stakeholders in corporations. In international business, agency problems may exist between managers, owners, staff, and other stakeholders who come from different cultures. Therefore, there is a need in designing efficient management of international business by influencing the factors (the convergence factors) which cause differences in the

interests and cultures of different stakeholders. International business refers to all commercial transactions between two or more nations. Because it comprises a large and growing portion of current world business practice, international business has received considerable attention in academic research (Daniels and Radebaugh 1998). International business differs in important ways from business conducted within national borders, and poses additional challenges to managers and investors in foreign countries (Mahoney et al. 1998). In this context, Black et al. (1999) state that effective management

is increasingly recognized as a key determinant of success or failure, arguing that the success of international business in multinational companies depends most significantly on the quality of management systems (Stroh and Caligiuri 1998). As international business involves people from different cultures, every

business function including managing a workforce, marketing output, and dealing with regulators, has the potential to involve cross-cultural problems (Zineldin 2007).
